Too bad your folks didn't have access to this organization, Hansie.

>It is a mixture and a blend of many cultures, mostly European, but
>increasingly Asian and African as we gain more Americans from those
>backgrounds

Absolutely. But there IS an "American" culture. If there wasn't these
ragheaded bastards wouldn't be in such a rush to destroy it.

>My background, Russian/German...(SNIP)

That explains a lot.

> When I was a child I didn't know anyone over the age of 40 whose
>native tungue was English, yet out of that small farming community have
>come a Medal of Honor recipient, a state governor, dozens of career military
>people, a congressman, and other significant contributors to the American

That is, you will pardon the expression, a Big 10-4. I believe the Tech got
its own test about 1986 or 1987 so anything prior is a 'paperwork General'.

Not necessarily. If God is omnipotent, it would mean that physical
phenomenon would behave however He wanted it to, whenever He wanted it
to behave that way, irrespective of normal physical behavior.

By golly, I think you've got the drift, there, Jim. I hear tell
there's actual computer software out there to help the younguns learn
the Chart, by golly. And some weird product called Chart Quick! We
never had such a soft time in MY day, lemme tellya!

They just gotta put down the keyboard and the mike and start plotting.
>
> Of course, nothing compares to actually getting on the air with
> the Smith Chart.

Absolutely, by golly.It works when other computational methods won't,
doncha know. All you need is a Chart and some basic drafting tools.
The Ancient Ones used to draw their own Charts from scratch, lemme
tellya.

>
>Ryan

Ryan:

The 75-meter band is actually the phone part of what is more commonly referred to the 80-meter band. The distinction is made because at that higher frequency, the wavelength is much closer to 75 meters than it is to 80, and this is a substantial difference.

> Hans...?!?!

If "functional literacy" means the ability to read and write English,
then I know of several elderly people who depend on others to translate
documents for them. They can carry on a conversation in English, but
are far from "functionally" literate. I currently live in a metropolitan
area where many hardworking immigrants from Asia are raising American
families, and whose grasp of even spoken English is poor to non-existant.
But there is no doubt of their patriotism, nor of their desire to contribute
to the future of their adopted country. Your narrow-minded insistence on
"speak English or else" would remind them of the totalitarian regimes which
they fled in search of the freedoms of America.

With all kind wishes,

And I suggest, Your Airheadedness, that you see the posts of others here
who further point out that the "or else" comments were NOT mine.

I DO advocate one COMMON language...for all...NOT exclusive of others.

If you can't see the difference, perhaps it's because you have your head
so far up your tailpipe that you can't see what's going on around you?

If you are paying attention to anyone else's posts than yours and mine,
you will see the "or else" and "nothing but English in publc" were the comments
of a third party.

Perhaps you'd care to try again, Your Putziness?

Or perhaps not...You are on a rant and I know it might cause you to suffer
horribly if someone awoke you abruptly.

>Richard, if someone holds a technician license (still current, being renewed >now and then) which was issued back in the 60s, wouldn't they only have to >file paperwork and automatically be upgraded to general?

Yes.

The date in question is March 21, 1987. Before that date, the Tech and General used exactly the same written (old Element 3). After that date, the test was split into two parts: Tech (old 3A) and General (3B).

If a current Tech Plus can show that he/she was licensed as a Tech before March 21, 1987, a "paper upgrade" is possible. The ham still has to go to a VE session and pay the VE fee, though - it can't be done by direct interaction with the FCC.

Otherwise, current Tech Pluses need to pass the current version of Element 3 (the General written) to get a General. It's 35 questions, multiple choice.

> I believe back
>then the only difference was the code test (the licenses were novice, 1 year >non-renewable, technicial, 5 wpm with general theory, and general with its' >13 wpm requirement). This would not, of course, apply to most tech tickets >currently held.

Novice was 1 year nonrenewable nonretakeable from 1951 to 1967. Then it was two years nonrenewable nonretakeable until the mid 1970s. The '70s saw some quick changes - first, the license was two years nonrenewable but you could retake it after 1 year off the air. Then it was two years and retakeable right away (as soon as it expired). Finally it was 5 years renewable.

The quoted post is certainly true. No matter what the tests are, or require-ments, there will always be those that jump the hurdles with no thought of tripping over the bar. Their only incentive is just to get on the air and talk..
I still see the other side of the question as well, and what I believe the propo-nents of "higher" hurdles are trying to convey. It "can" be somewhat frustrat-ing to deal with those whose who seek not the learning aspect of what they do--only memorizing enough to get by the multi-choice questions.

For example, (I have said this before) I build a version of the popular screw-driver mobile antennas. I provide instructions on how to set the thing up, ex-plain about impedance matching, and try to provide hints and tips as how to get the most out of it. I have had a number of "Extra" Class hams return to me saying that the antenna doesn't work. Upon examining their installation, I usu-ally find that they did something wrong, or they just didn't read the instructions.
Many of their questions can be answered if they would take the trouble to read. Another group just simply has NO idea, not a clue, about how to set up a station. They want "plug-n-play"--they are used to plugging a handheld into the cig lighter, slapping a mag mount on the roof and VOILA! They is one of them thar hams! But HF is NOT like that, so when they slap the antenna on, run the "wars" (wires) up 'ere to the front and the SWR goes thru the roof, they get on the phone or email and tell me it won't work. 99.9% of the time it is their own ignorance of HF and antenna theory. .01% of the time, there is, indeed, a small problem that occurred during building or shipping damage. (UPS has ingenious ways of circumventing damage control packing). They then expect me to install it for them. THAT ain't for free! Yes, I do get aggra-vated at these Extra "lites" that should know more than I (Advanced). I do think that Amateur Radio should be more than jabbering on a radio. It should be a learning experience, and being the "gimme" society we are these days, that is becoming rare; we just memorize the question pool, answer questions by rote, and then trip over the "hurdles" later (that resistor that smoked

suddenly,
the SWR that won't come down, the squeal that comes thru another speaker
while transmitting, etc.). After all, ole Jerry 'll fix it for me, right?
I can't help
grousing, "how come HE doesn't fix his rig his damn self?"

Still, I am aware that the days of learning a modicum of circuit theory,
building
transmitters is a fading art. That is the state of the hobby, the regulatory
guys
have made it clear that such is less and less important, and a memorized
test is
all that is needed. Hehe, those guys will never know the "joy" (pain) of
getting
zapped by a capacitor he thought he neutralized with a screwdriver, gettin
the
crap burned out of your hand by grabbing the wrong wire on a dynamotor, and
a host of other things.

Wrong. It represents the top level of amateur licensing, or once did.
Today it just represents, well, another question pool test element
studied for and passed. Were it not for the fact that FCC doesn't want
to hear all the noise that would result I have no doubt it would no
longer even bear the name of Extra.

Why do you have so much trouble with that
> concept?

You manufacture your "concepts" on the fly to suit your agenda du
moment, and this is just another example.

Anyone who barely squeaks by gets the same license as
> I who scored 100% on the exam.

Ah, but before the code was dropped to almost nothing, you couldn't
pass it at all. No wonder you're so dedicated to fighting the concept of
the current "dumbed down" tests.

Extra entry level exam. You still don't grasp that concept. Many,
many Extras were extremely over-qualified for the Extra class when
they took the Extra exam. The percentage knowledge difference between
the ones who barely squeaked by and the extremely over-qualified ones
may have been thousands of percent. That means that you need to prove
your ARS worth aside from merely passing that Extra entry level exam.
Yet, you have stated earlier that you are perfectly happy to rest
on the laurels you had when you passed the exam. It's easy to see why
you have that attitude but most of us are not impressed. What have you
done for the ARS and yourself lately?

I've been away from this newsgroup for several months, and I can see that some people still don't have lives.

Your response only shows your ignorance of how the human mind learns and processes information. What you incorrectly perceive as double- or triple-translation is far easier and quicker to the learning of sound schemes than just rote. CodeQuick engages visual and aural senses. When more senses are used, information is more easily retained. Speed, which is the only thing you care about, is not within the structure of CodeQuick.

I suggest you educate yourself by reading some books by Tony Buzan and Harry Lorraine. They're been using and teaching these techniques for years.

I'll answer your ignorant response with a post taken from another
venue.
This says it all:

Below is a quote from a comment appearing on a QRZ article. What is
wrong
with this picture?

"let's welcome the new extra class licensees, and help them to gain the
experience they need to become good amateur operators"

Ahhhhh! This is what we used to say about Novices & Techs. Talk about
grade
inflation! I think I now favor the old (pre-1970s) 2-year experience as
a
General as a prerequisite for becoming an Extra Class. Of course, I
took 20
years to go from General to Extra, but that's another long (hey, 20
years
long) story.

I'm all for helping newbies, of course. But gee whillakers.

Let's hope you can adjust to dealing with the apparent religious contradictions in your life. The chances are, though, that you aren't serious and that this entire discussion is yet another attempt to setup one of your lengthy definition games.

>> Well, that would be .001 % of ham radio ops.

Well, let's do the math.....

1% is one in a hundred
.1% is one in a thousand
.01% is one in ten thousand
.001% is one in a hundred thousand

There are about 682,000 hams in the USA currently, so .001% is about seven hams. Cecil, Dr. Williamson, K7JEB and I make four, so there are three others out there who know the Chart...

>Then 99.999% of hams radio ops are not real hams.

Only seven of us in the USA!

Ah, but there are Smith Chart questions on the Extra test. So people who want to be Extras are forced to learn the Chart or else risk failing the test. The Chart is shoved down their throats even though there is no requirement to ever use it.

And you have proposed that it be tested even more (PSCTA movement, you called it. Some kind of movement, anyway).

73 de Jim, N2EY

qualified to use both Smith Charts and Morse Code.

It is neither hostile nor supporting. The statement doesn't say
that hams should NOT learn CW if they want to...neither does
it say anything in opposition to hams using CW if they wish.
The statement addresses only the "need" to learn or not.

>> The

No religious contraditions in my life, Dave. If God ascertains what I am going to write a day before I write it, then I don't have free will. Since I believe God wants me to have free will, I trust he will avoid peering into the future to see what I am going to write. If he doesn't avoid the temptation to look into the future to see what I am going to do, then he cannot hold me accountable for what I do that matches what he already knows.

Lets see now, you're the dude who stated categorically that you never
had any interest nor reason whatever to get an Extra class license, and
swore that you would not get one, whatever the outcome of the
restructuring. And right away, when the code was dropped to 5wpm you
"changed your mind" and nickeled your way right into one.
I can't see any basis for anyone to confer any credibility toward

anything you say, and that's ignoring the plethora of your other miscegenation's here on rrap. End of story.

That pile of "ifs" certainly looks as if it leads to some
contradictions. You know, it dawns on me that logic doesn't account for
or solve every problem.

I don't think it's religion as much as intolerant ideologies that take
on religious trappings. But you have the basic concept right: It's
folks who cloak themselves in the trappings of having God "on their
side".

John Lennon addressed this very issue years ago in the song "Imagine".
The classic TV series "WKRP" dealt with it in one episode. I borrowed
this description from another NG:

>It was the final episode of the third season, broadcast at the height
of the
>controversy about the religious right and TV and radio. WKRP is
visited by Dr.
>Bob Halyers, a preacher who looks and talks a lot like Jerry Falwell.
He heads
>a media task force called Clean Up Radio Broadcasting (CURB) and WKRP
is his
>first stop. He gives Mr. Carlson a list of songs with obscene words,
and Mr.
>Carlson, a religious man who likes Dr. Bob and believes his talk
about
>representing "the will of the people," asks his staff not to play the
songs any
>more. But then he gets another list, and he realizes that Dr. Bob is
trying to
>dictate the station's playlist. So he goes to Dr. Bob -- here's the
scene,
>courtesy of a quotes page:

>Mr Carlson: I had one of my disc jockeys, Dr Johnny Fever, give me
the lyrics >to
>a song. He wants to know if you'd let him play that song on the air.

>Dr Bob, reading: "Imagine there's no heaven, it's easy if you try. No hell >below us, above us only sky. Nothing to kill or die for, and no religion too. >Imagine no possessions? Imagine all the people sharing all the world?" That >sounds like communism to me, if there's no heaven, no religion and, I assume, >no God.

>Mr Carlson: There's not an obscene word in here.

>Dr Bob: Not the way I see it.

>Mr Carlson: Does it go on your list?

>Dr Bob: Arthur, this is typical of the kind of secular, liberal humanist point
>of view that gluts our airwaves.

>Mr Carlson: Yeah, but we're not talking obscenities here anymore, Bob, we're
>talking about ideas - political, philosophical ideas! First you censor a word,
>and then you censor the ideas.

>Dr Bob: The idea is man-centered, not God-centered. Man is an animal. The Bible
>tells us to put our reliance in God, not in our fellow mortals. Arthur, this
>song says there's no heaven.

>Mr Carlson: Ah. No, it says just imagine there's no heaven.

>Dr Bob: That's blasphemy.

>Mr Carlson: On the list or not?

>Dr Bob: I have no choice but to say on.

>Mr Carlson: That decision was made by ONE man.

>So Mr. Carlson breaks off with Dr. Bob (but he warns Dr. Bob, whom he still
>likes personally, that the people who will cave into his crusade are exactly >the sort of people who can't be trusted to support him when the political tide
>turns), and accepts the loss of business resulting from the boycott organized >by CURB.

>The best line from the episode, as usual, comes from Les Nessman:

>Les: In a situation like this, I always ask myself, what would my hero Edward >R. Murrow think? And I think that Ed would think that this was censorship. >Then I think about what my other hero, General George Patton, would think, and >I think George would think that radio and television ought to be cleaned up, >and if he were alive today, he'd take two armoured calvalry divisions into >Hollywood and knock all those liberal pinheads into the Pacific! So as you can
>see, I'm a very confused man. And when I get confused, I watch TV.

Television
>is never confusing. It's all so simple somehow.

"WKRP" was one of the best shows on TV. Not just funny, but serious
and truly original. The network canceled it despite excellent ratings.

In a classic case of "Life Imitates Art", at least one radio syndicate
("Clear Channel") has released a list of "banned songs" that it
doesn't want its stations to play in the wake of the WTC and Pentagon
attacks. Yes, "Imagine" is on the list.

I see...now you get your chops busted for "appearing" to "defend"
something...?!?!

No, I am NOT in favor of making one language MANDATORY for sole use in
public.

I AM in favor of determining ONE language to be the OFFICIAL language of
the realm. That others may be used by individuals is fine.

On Judgment Day, when God says, "Why did you do that?", I will
ask, "Did you know I was going to do that before I was born? If
so, I had absolutely no choice in the matter." Not that I can
win an argument with an angry omnipotent God.

Someone made a posting to this newsgroup that changed my mind.

The posting was: What if the Advanced class license is canceled
sometime in the future and Advanced license holders are busted
back to General? Saving future effort was the first good reason
that I had ever heard for me to get an Extra class license and
getting one didn't change me into an AHole like it did some hams
I know.

Only as long as everyone agrees to certain basic rules and responsibilities.
For example, we have religious freedom, but that doesn't mean that all
religions are allowed. A religion that requires killing unbelievers simply
because they are unbelievers cannot be allowed.

One of the biggest differences between the USA and places like Afghanistan is
that the USA is founded on the idea of plurality while the Taliban wants a
monolithic state - to the point that individual THOUGHT will be wiped out.

Ever read George Orwell's "1984"?

I would rate the above a #2 and #3. #1 is injustice. Solve #1, and the rest will be solved, too.

>Unfortunately, with literally hundreds of languages and/or dialects of
>various
>languages it is almost impossible to overcome that.

Obviously you have never heard of the Babelfish.

In many parts of the world, being multilingual is almost a given. In Europe it's common for people to speak several languages. One reason Americans are disliked by some is that so many of us only speak American.
>
> Let a Hispanic mom talk to her kids in her native tongue at home, but
>anyone who emigrates to the United States should be obligated to speak at
>least
>conversational English within 2 years. School children should speak nothing
>BUT English (save those in classes for other languages, and only IN those
>classes...)

What you are concerned with are the immigrants who come here and refuse to learn the language.
>
> In those areas of America where we solicit foreigners (ie tourist areas,

>here.

But who gets to define where those areas are?
>
> But if you ELECT to LIVE here, by golly you should be a part of THIS
>culture. Not African...Not Asian...Not European...

And again - who gets to define what American "culture" is?

When jazz first appeared, it was derided by some as "African music" and far worse. Its roots are certainly African, but jazz is pure American.

Are the Beatles part of "American" culture? They're British!
>
> Respect, enjoy and learn about others' cultures, but if you want to be
>American, then BE American.

>
Trouble is, they think they ARE being American!

The strength of the USA comes from embracing and adapting the contributions of those who came here. It's a pluaristic society, with all the problems such a society entails. But the opposite is to go the route of Nazi Germany or Taliban Afghanistan, trying to create a "pure" culture.

Dick, I've been reading the thread and it seems to me everytime a discussion starts as to what should be tested, the suggestions offered somehow seem to be very biased in favor of the suggester. I recall one thought offered by a gentleman in 73 magazine. There were several ways to 'earn points' towards a higher license. One of these was to obtain WAS on 144 MHz and higher. Of course, the gentleman suggesting this had his own private airplane - which would make obtaining WAS a fairly simple proceedure. Oh, and DXCC was another way he suggested. Of course, he had a HUGE piece of property in the country, allowing antenna farms such as city dwellers could never have, and even suburban dwellers would face opposition to putting in antennas anything like his. The same probably applies to the CW arguments. Those who can do 20 would like to keep it there (or move it back there; probably to reduce competition in the reserved areas of the bands) and the folk with BS and higher degrees preferring to make the theory test truely difficult.

I do have a question, however. I honestly can't remember the 2 year requirement. I had my novice ticket in 1962 and my general in 1964. In 1966 I obtained my 1st phone, 2nd telegraph (too young and no time to get my 1st), and amateur extra. Was there such a requirement? When was it abolished? Actually, in 1962 the only tickets were novice, technician, and general (and the novice was a 1 year non-renewable license at that!).

I am sad to relay the following info from SBE, FCC, and ARRL:
sources:

The FCC and Amateur Radio communities are mourning the loss of FCC staff member Steve Linn, N4CAK, of Lower Allen Township, Pennsylvania. Linn, 50, and his wife, Lesley Ellen Nearman, 44, died September 21 as a result of an automobile accident in Maryland. The couple's two children survived the wreck.

ARRL President Jim Haynie, W5JBP, said he was deeply saddened by the news. ''Steve had not only been a valued employee at the FCC but also a good friend to the Amateur Radio community,'' he said. ''Having just visited with Steve a few days ago in Washington, I will remember his jovial spirit and dedication to the success of ham radio. Our prayers will be with their children, Steve and Lesley's families and all the employees of the FCC who will long feel this great loss.''

The couple's children, Deena, 9, and Andy, 12, were treated and released at a York, Pennsylvania, hospital.

Linn was among the FCC staff members who turned out last Tuesday for the ARRL ''Amateur Radio Demo and Education Day'' at FCC Headquarters in Washington, DC. He and Haynie were scheduled to do a forum presentation together at the Virginia Beach Hamfest.

FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said Linn was well-liked by the FCC staff members and contractors he worked with at the FCC's Gettysburg office. ''He was a very, very nice guy, a good engineer and he had common sense,'' Hollingsworth said. ''He knew the value of Amateur Radio and saw the big picture. Although he worked for the Wireless Bureau, the Enforcement Bureau was increasingly relying upon him for Land Mobile and Amateur licensing and technical matters. We will miss him very much.''

An Amateur Radio licensee since the 1980s and an ARRL member, Linn was deputy chief of the Licensing and Technical Analysis Branch for private wireless within the Wireless Telecommunications Bureau. His supervisor, Mary Shultz, said called Linn's death ''a major shock'' to the branch. ''He'll be difficult to replace as an employee,'' Shultz told ARRL, ''but impossible to replace as a friend.''

Linn had worked for the FCC for about 25 years, the last six or so years at the Gettysburg office. Among other Amateur

Radio-related topics, Linn frequently served as a source of information for the Universal Licensing System and the Commission Registration System, CORES. Linn spoke about ULS during the 2000 Dayton Hamvention FCC Forum. He also was a presenter at local hamfests.

Services for the couple were held September 24.

Steve was a good friend of mine and will be missed greatly.

> about this?

This was discussed here in rrap in its own thread back in early June,
2000. Google is a good archive if you want to see all the exchanges.

I'll sum it up for ya, though. Thanks to K2UNK and Kim for posting
this stuff back in June of 2000.

Here is
what Bill Cross, W3TN, of the FCC had to say about vanity callsigns
at the Dayton Hamfest. (Source: W5YI report of 6/1/00
which reprinted Bill Cross's speech in its entirety.)

"Some licensees are picking combinations of letters and
numbers that other licensees find objectionable. Other
licensees are letting us know they don't like some of
the choices."

"Some of your fellow hams have picked call signs that are
intended to offend you, incite you or call attention to
anatomical features or various body parts. Licensees that
use the vanity call sign system to make a statement or
pick a call sign that offends you still receive the protection
of the first amendment of the Constitution. We (FCC) do
not censor call signs."

END of QUOTED TEXT

In short, what he's saying is that if a ham requests a vanity callsign
that is available to that ham, the FCC will issue it, even though it
may be offensive to others.

What he didn't say is that the FCC does not routinely issue such
calls. There are very few US hams with Kim's callsign suffix. (One of
them has the first name Michael and has had the call since at least
1979!)

Before Kim knew about this FCC policy, she emailed Riley about the
issue, and shared Riley's response with us. Here it is:

"While that's true, just because a person has a right to do something doesn't
mean it's right to do it on every occasion. While the call sign may fit the
constitution, for every instance where a parent or uncle or grandparent
doesn't want a young person to get involved in Ham Radio because of
something they hear on the bands, then you have taken the ARS one step
closer to extinction. Then we can sit around and debate what happened to
all those Amateur frequencies that industry bought at auction---debating, of
course, on the internet and cellular because that'll be all we have left.
The first amendment will still be alive and well, just as it is now, tho, if
that's any consolation."

END QUOTE

In other words, just because it's legal under FCC rules doesn't mean it helps the ARS. You don't get a second chance to make a first impression. If enough of us do "legal" stuff that hurts the ARS, the result is not good for ham radio.

What's your opinion, JJ?

N2EY wrote:

> My disagreement is with your interpretations, not the definitions.

They are not interpretations, Jim. They are valid definitions
chosen from a modern dictionary. In particular, in the field of
logic, "truth" has a different meaning from "fact" and I have
known that for 40 years.

> Congrats on the old/new call, btw.

I debated whether to get WN5DXP (my first call) or W5DXP (my
second call). W6RCA was my third call, a requirement of the
FCC in those days. I haven't got my paper license yet. How
did you know I changed calls?

Question for anyone. I have just upgraded to Netscape 6.1 and
am having trouble getting the formatting of my postings
correct and consistent. It seems to insert extra line feeds
that are not apparent when I type the posting. <Backspace>
also sometimes malfunctions when trying to delete a line feed.
<Enter> seems sometimes to insert a random number of line feeds.

Also Netscape 6.1 asks me for a login name and password much
more often than Netscape 4.7 did. Any suggestions?

I didn't say they had disproved it yet.

>>There was simply a collision of two universes.

> Does this theory disprove the other theories? That's a neat trick.
These theories are not just neat concepts. They must be supported

by a whole body of math and physics. The Big Bang theory requires
that the universe inflated at faster-than-light speeds during its
early existence. The new "Braney Universe" theory is an extension
of string theory and doesn't require faster-than-light inflation.

Note that the date is the date that the EXAMINATION was taken by. Some
pre-March 1987 candidates didn't receive their actual license until about June
1987. They will also have the credit, even though their LICENSE was issued
after the magic March date.

>If a current Tech Plus can show that he/she was licensed as a Tech before March

Ooops, correction:

Take Hwy. 84 to Port Jervis, NY, NY exit 1; follow Rt. 6 through Port Jervis to traffic light with Rt. 97/42 signs, go through and follow Rt. 97 west for 10.8 miles to Pond Eddy (motel on right, bridge on left), turn right onto High Rd. (Rt. 41), go up the steep hill for 1.7 miles, Verkhovyna is on the left. Plenty of parking.
Maps are at www.UACF.net home page and click on directions.

What did you mean by "There was no spontaneous Big Bang"?

> >>There was simply a collision of two universes.

> > Does this theory disprove the other theories? That's a neat trick.

> These theories are not just neat concepts.

What I said is that it would be a neat trick for one theory to DISPROVE
another.

There's nothing particularly problematic with the faster-than-light
idea.
You have particles traveling through you at faster than the speed of
light several times every second. (Muon flux at sea level is
70/sec/meter^2)

String theory is probably the most interesting and challenging field in
Physics right now, and probably for some time to come. The main
challenge lies in finding an empirical test for the theory.

Maybe I need to learn to saddle a horse and take a riding course too,
just in case, after the big one, none of our cars run since there won't
be any gas, and all the engine/tranny processors will be dead. And,
after all, riding is easy and fun. I'm sure the DMV will be really
amused as the suggestion that this be added to the driver's test.

BTW, I've driven a 5-speed manual vehicle since 1975.

>What you are concerned with are the immigrants who come here and refuse to
>learn the language.

A resounding YES. One of the many frustrations of my profession is trying
to care for persons who don't speak the language.

In many cases these are people who have resided here for many years, yet
don't speak English...yet now they are pesenting to my ER and need help and it
is now somehow >MY< fault that I can't communicate with them.

Ever been to Mexico City and needed help? Didn't speak Spanish beyond
"Amigo" and "Cervesa"..?!?! You can bet that if you are in someone ELSE'S
country and don't speak the speak, you are in for it.

>One reason Americans are
>disliked by some is that so many of us only speak American.

Yeah...I guess that not being able to speak (enter local dialect here)
while feeding them, housing them or defending them is pretty pretty callous.

>But who gets to define where those areas are?

Tourist: We accomodate their needs

Resident: Hand 'em a text book.

>The strength of the USA comes from embracing and adapting the contributions
>of
>those who came here.

I agree...wholeheartedly. But do I ahve to learn Grek or Russian to
appreciate them in my own country?

>But the opposite is to go the route of Nazi Germany or Taliban
>Afghanistan, trying to create a "pure" culture.

That's not what I want, Jim. What I want is a society that can enjoy a
common frame of reference and understanding.

Whoa there pardner, you changed it from "he" to "He".
"He" probably spoke ancient Hebrew. "he" probably spoke
Greek. "he" was the boss of the gods, at least in Greece.
Remember, that's who you asked for - the boss of the gods.

Sorry, Cecil, I don't see the connection between the book and your fact. Could you expound a bit more?

I see lots of parallels between the philosophy of 1984's Big Brother and the Taliban regime.

btw, one of the first things the Taliban did was to disarm the populace. They went around and confiscated not only guns but almost anything that could be used as a weapon. Possession of a forbidden weaponlike object is severely punished. The result is a very low crime rate - and a totalitarian government with almost no fear of being challenged, let alone overthrown.

>quite the freedom.

In other words, if a person has nothing to hide, what's the problem?

I agree in part, Kim. But there are problems. The first one is that a private conversation can be taken out of context and used against you. The second is that, little by little, each person's right to privacy can be eroded.

Radio and the public parts of the internet like websites and newsgroups are public media of course. But how about email? How about regular letters sent by US mail?

Then there are medical records, financical records, legal records, and so on. The loss of privacy in those areas is a serious concern.

Yup. But would you say:

"there simply is NO reason for the vast majority of hams to ever learn Ohm's Law"

or

"there simply is NO reason for the vast majority of hams to ever learn how to use a Smith Chart"

or

"there simply is NO reason for the vast majority of hams to ever learn how the standard phonetic alphabet"

See what I mean?

>1st), and amateur extra. Was there such a requirement? When was it
>abolished?

From the inception of the "modern" Extra until 1951 until 1973, one of the requirements for the Extra was a minimum of 2 years' experience as a Conditional, General or Advanced. That meant you couldn't even try the Extra test until at least 2 years from the date of issue of your C/G/A license. In 1973 the requirement was reduced to 1 year, and in 1976 it was abolished entirely.

The pre-1953 Advanced/Class A had a similar 1 year experience requirement. When the Advanced was reopened to new licensees in 1967, the 1 year experience was not part of the requirement.

> Actually, in 1962 the only tickets were novice, technician, and
>general (and the novice was a 1 year non-renewable license at that!).

No, not really.

In 1962 most hams had one of the above three, or a Conditional, which was a by-mail General. But the Advanced and Extra licenses existed then. No new Advanceds were issued from the end of 1952 until 1967, but those who had them before the door closed could keep renewing and modifying them indefinitely. There were about 40,000 Advanceds in 1962, out of a total of about 250,000 US hams then. The Extra was available as well, but there were only about 4,000 Extras back then.
>
For more info on this subject, check out "The Past 50 Years of Amateur Radio Licensing" which was posted here back in 1999. Google has it.

You will be pleased to know:

1. I got a copy of Dave Barry's Book of Bad Songs.

2. Manheim SteamRoller has a new Xmas album out, Christmas Extraordinaire, featuring no less than a Johnny Mathis vocal. Start ignoring it now, the ad men are lining up.

A number incorporating the infamous frequencies 14.313, 147.435 and or 3950
would be good. 800-313-3950? :-)

> all but passed.

You're not keeping up with the times, Bill. Many Hams are already doing what you suggest. For example, since the WTC attack, communicators with the Coast Guard Auxiliary have put in an amazing amount of man hours - ranging from manning Coast Guard communications systems to free up active duty personnel for other activities to standing relief watches for over worked active duty personnel. And a large percentage of the Auxiliary's communications personnel are volunteers from the ham radio community.

So, while it is true that there is a severe shortage of communications personnel in the Auxiliary, which has caused us to limit the range of services offered, this does take anything away from those who have already volunteered to help. They have done, and will continue to do, an outstanding job (even if people like you never notice them).

By the way, if anyone is interested in helping, please contact me by email. Our role in the current crisis is winding down (limited to a several small areas at this point). However, when it comes to the Coast Guard, there will always be other situations in the future (hopefully far less horrible than this one).

We were caught short handed during this crisis and we do not want that to ever happen again. Therefore, we are urgently seeking to increase our membership. Personnel are needed immediately to train for search & rescue operations, communications activities, and a long list of other missions. Since training is required, it is too late to step forward when a crisis happens. Now is the time to step forward if you want to help in the future.

That is why--if we are to "give up personal freedoms" as has been discussed
among people of the United States and our media--we need not be so hasty in
giving those privileges/freedoms up without definitions, guidlines, etc.

> Radio and the public parts of the internet like websites and newsgroups
are
> public media of course. But how about email? How about regular letters

> US mail?
>

We must all decided (and not allow the government to decide carte blanche)
how far we want this "new world" to go. If everyone heard the same thing I

have; it is "understood" by our Congress and the President that there is this "blank check" out there. I didn't authorize a blank check; I didn't even really get to say a thing about it. It was a quick decision made by Congress in the heat of the moment.

> Then there are medical records, financical records, legal records, and so on.
> The loss of privacy in those areas is a serious concern.
>

I have already heard it discussed here (on talk-radio, on ham radio, etc.) that to express what you just said above, Jim, is anti-American. We all must "wake up" and realize that our government is pretty much being allowed to do whatever it wants right now--with narry a protest from any of us because we are a) too afraid to be identified as "sympathizers" with terrorists, or b) our emotionalism is ruling, rather than common sense.

> 73 de Jim, N2EY
> >
>
>

The question now is: Will the United States citizens ever get to "say" how far they feel comfortable letting this go? My point, exactly is that we needed to have rules, guidelines, proposals, etc., *before* this blank check idea caught on. As I said once already: it will be hard to reverse any "relaxations" we allow on our freedoms/privileges.

To top it all off, I *understand* the people who have the sentiment that "if you're doing nothing wrong, you shouldn't worry about who's listening to your private conversation or who's watching your bank account. BUT--how far do we allow it all to go in the name of fighting terrorism?

We hear this "they [the terrorists] haven't won--they haven't affected anything about us and we are going to go on as normal." Yet, reductions in plane flights have caused huge layoffs in the industry; have caused our taxes to be used for bail-out; have struck fear in many not to fly; have caused movie releases to be pulled back, have security companies clamoring to hire enough people to staff up, and on and on it goes. What was that I heard about "our lives go on as normal every day?"

Hehe,

Being from the South, Catholic nuns were quite a novelty in the '50s around here. Nonetheless, I can relate to the ruler business. I had a first grade teacher that had a fondness for this kind of punishment. She looked much the part of the 19th Century school m'arm with button shoes and hair severely pulled into a bun. We would whisper and giggle about her head looking like she had been sitting under the wrong end of a cow. We certainly did our share of mischief, but it was much milder than the stuff seen today. It didn't take much to pro-voke a WHACK or five with that ruler. Shoot a spit wad onto the ceiling--- WHACK! Sneak a piece of candy--WHACK! Pass notes--WHACK WHACK!

We were taught to count with an abacus--that ancient instrument with the beads on strings. One day she was giving individual tests on counting to 100, and I got wise. As you counted off, she would move a bead across the string with her pen. I got the bright idea of counting faster and faster. More than once, she told me to slow down, please. I'd slow down and again get faster and faster until her pen was almost a blur as she tried to keep up. She grabbed me up by the arm suddenly, marched me over to her desk, made me hold out my hand for those dreaded ruler licks. I jerked away, and that got me sent to the prnicipal's office for a genuine paddling. Her ruler was in about 3 pieces!
The class started laughing, but it didn't last long. Just a threatening look from Mrs(?) Biggerstaff was enough to stop that. LOL!

She was the only teacher I encountered that would do that--the rest didn't mind applying the paddle!

Jim,

Did your schools have those old steam radiators? Put out some good heat,
but some rooms would get alternately cold and hot--not to mention the loud
clicking and clanking; Sometimes, at our elementary school, the clanking
would
get so loud, the teachers would have to stop for a bit until it calmed down.
Our fire drills had another purpose as well. Seem those boilers were
ancient,
and would overheat, or suddenly lose water pressure forcing us to evacuate
quickly! The principal would announce over the quirky PA that it was no
drill,
and for us to move quickly to the other side of the ball field. I remember 2
oc-
casions where there was danger of a boiler explosion, and we spent the re-
mainder of the afternoon playing in the woods at a safe distance. Of
course,
we looked forward to boiler evacuations since it usually meant studies were
over for the rest of the day. One of those was when we had 2 feet of snow
on
the ground, and we occupied the time by "skiing" down the banks bordering
the field in our shoes. Even some of the younger teachers joined in this,
much
to the delight of the students. This showed us that all of our teachers
weren't
ruler-wielding old fuddy duddies.

In addition to those things already mentioned by others, Larry, you also have to remember that there are a large number of organizations involved in this situation. And a great many of these organizations don't have the extra personnel to handle a situation like this. Because of that, the communications personnel in those organizations are working extra hours and are quickly burning out from the effort. Therefore, many of these organizations are looking elsewhere to supplement their existing communications system. Even organizations that have their own supplemental manpower, such as the Coast Guard (with it's volunteer Auxiliary), are being stretched to the limits. This is a massive situation that is putting a massive strain on the existing communications system.

It has EVERYTHING to do with new hams vs old timers - you want to put up an addition requirement for today's hams that older hams did not have. And you seek that additional requirement because you feel that today's Extras are not as good as the Extras of years past (your message makes that very clear). But, since you haven't proven that today's new Extras are any less skilled than new Extras of the past, your idea is nothing more than garbage designed to further divide the ham radio community.

> a higher license.

Jim, there has never been a shortage of such suggestions. I have no quarrel with most of the restructering, but they effectively eliminated the Extra class by diluting the requirements over a few years time to the point that it is now 'extra' in name only. I believe the only reason they didn't just eliminate it was because of all the noise that would have generated.

I contend that any ham who is serious about the hobby, and particularliy about HF, will be CW qualified, and that when there is no CW test there will be no reason for new hams to ever learn it. Oh, a few will, out of curiousity and a few will actually go far enough to actually like it, but their numbers will be so few that the mode will effectively dissappear as a useful communications mode. That is, more that anything else, a travesty and a unecessary, pointless loss to the world of communications. We all know about the reduced role of radiotelgraphy in present times, and why. But for anyone to insist that it has no communications value is ludicrous, given its history of 100 years of success. It is as useful today as ever, using much simpler equipment, is almost universally present on every HF rig sold today, and needs only a little operator selftraining to be available instantly when needed. But most hams entering today have no frame of reference by which to understand this fact, and all the old time code haters preaching against it only makes it that much worse.

I honestly can't remember the 2 year
> requirement. I had my novice ticket in 1962 and my general in 1964. In
> 1966 I obtained my 1st phone, 2nd telegraph (too young and no time to get my

Yes indeed there was, and it was eliminated in the mid-1070's as I recall, Jim N2EY will know for certain, he's the resident historian.

Actually, in 1962 the only tickets were novice, technician, and
> general (and the novice was a 1 year non-renewable license at that!).
>

Those were the only licenses available to new licensees, but the older Advanced (formerly Class A) were still valid and renewable. The Advanced

was reinstated with Incentive Licensing in 1968.
I'm another who took all the tests at one sitting since I'd had a Conditional/General since 1957 when I went for the Extra license in 1969 at. I got credit for only the Novice, and took the 13 and 20 WPM code, and General, Advanced and Extra writtens in about 2 hours. Was sorta drained afterward.
That was a bigger deal when it happened at the FCC district office.

And how would they go about proving when they took the test? I'm sure
there are no old FCC test records remaining. It was common in the 50's
and 60's for the FCC to take up to two monts to process a license test,
but that was not always the case. Usually it was 4 to 6 weeks. The exact
date of a test would be difficult if not impossible to prove.

Uh, yes, if I recall correctly there used to be a 2 year requirement, albeit many years ago.As far as whether or not todays extras are as good as years past; based upon my observations I hear a lot of poor operating and lack of technical expertise. What do you attribute that to? Have you listened on the air recently? The lowering of standards to increase the numbers in ham radio is unacceptable to me. I don't feel that I am further dividing the ham radio community by bringing up an issue that needs to be discussed and resolved. Would you rather I bury it under the carpet? Act as if the problem didn't exist? Do you think I am alone in my perception? What have you done recently to clear up the division??

As soon as that is done, those folks don't have freedom of religion. And they would have to be watched constantly to insure that they don't try to carry out their rituals in secret.

But the point is the same: Unless they modify their religion to eliminate that practice, it cannot be allowed in our society. Freedom of religion is not absolute.

It's still worth the read. Most people latch onto the early part of the book, with the constant monitoring of the telescreen and the dreary shortages of everything. The important part is towards the end, where the reasons for the oppression are given. The goal of the Party is to wipe out the individual and create a scoiety of pure conformity. Just like the Taliban.

There was a 2 year experience requirement for Extra until 1973, and a 1 year requirement until 1976. I had to deal with the 2 year requirement (1968 to 1970). Imagine telling a 14 year old that he/she has to wait two years to even TRY the test - that's what I had to deal with.

The problem you describe is the classic one in license requirements. If the requirements for a license are made "easier", those who were licensed under the old rules grumble about lowered standards. If they are made "harder", those who are yet to be licensed grumble about having to do more than their predecessors. Either way, somebody is unhappy.

A third solution is to change the requirements for everybody, as was done in 1968. That made so many people mad that some are still fuming about it today - even those licensed long after the changes were made!.

>And you
>seek
>that additional requirement because you feel that today's Extras are not as

Well, I wouldn't call it "garbage", but it's an idea that has very little chance of being accepted because the FCC isn't into making the rules more complex. Just not gonna happen.

There have been incompetent hams of all license classes since there have been licenses.

The problem today is only partly due to the tests and the way they are given. Other causes are things like the high prevalence of manufactured gear and the influence of a "right now" society.

heheheh and people say that hams are dry, and have no sense of humor heheh.
I'll have to dig out my copy of the worst country song titles.

HAW!!! Never heard that one!

"And to the republic for Richard Stans"

"There's a bathroom on the right"

"She ate a one-ton tomato"

"Reverend Blue Jeans"

The processional hymn for my high-school graduation was "Amazing Grace", for
some reason. The programs had a misprint in the lyrics - the line "Through many
dangers, toils and snares" was printed "Through many dangers, oils and snares"
- so that's what we sang, all 600+ of us.

Although previous classes of my school had held graduation in Philadelphia's
Convention Hall, my class and a few after it were barred from there because of
what the previous year's behavior. (They set off firecrackers inside the hall).
So we wound up at the Sun Oil Center Recreation Hall, near Chester, Pa. The oil
company folks did not appreciate our acapella renderings of "The Texaco Song"
in the parking lot, and the irony of the misprint in the program was lost on no
one.

oh yes!

I am reminded of the song where the cowboy who sings the song goes into the bar and makes out with the Mexican girl, then has to run from her angry boyfriend. The song ends with a rather graphic description of the singer getting shot and dying.

Anybody remember that one?

OK, so maybe waiting to take the test is a bad idea..
how about this, that the prospective licensee for extra class demonstrate proficiency above and beyond his peers...
Now, I would think that is reasonable to expect for our top level license, no??

Nothing new about this idea at all. I had to wait "two years
in grade" from 1963 until 1965 before I could advance to Amateur
Extra class. Only in recent years was this requirement dropped,
and I agree that it ought to be re-instated.

With all kind wishes,

Marty Robbins. El Paso.

Down in the WEst Texas town of el Paso I fell in love with a Mexican girl.
Nitetime would find me in Rosa's Cantina, music would play and Belina would
whirl.

My all time favorite is, "When Are You Going To Shave Your Legs?"
circa 1960. Homer and Jethro were popular in those days.

Minus j is deficient anyway. Suggestion: See what "eeSoft"
has.

>> >The Smith Chart is a visual aid and an approximation insofar
>> >as numerical accuracy is concerned.
>>
>> We know, Len.

Minus j may have read about it once in QEX. Perhaps that is
the "mastery" he claims.

>> >A Smith Chart does NOT "solve" things by itself.
>>
>> It's a tool. Like a slide rule, abacus, lightning calculator, adding
>> machine, or a buggywhip.

The comparison made by the Minus j M is noted...but it is
still in use by professionals. If Minus j were really a
professional engaged in radio design he would not be so
depreciating. But then, few seem to know what Minus j
does other than spend hours on the Internet.

He hasn't stated his company's name. (those who feel good
about what they do for a living are seldom hesitant about
naming their company)

He hasn't made any technical comments on radio subjects
other than amateur radio history or an electronic T-R switch
supposed to be "featured" in the "Electric Radio" fanzine.
"Electric Radio" is for vacuum tube radio fans.

>> (snip of rant about Smith Chart's wonderful properties)

<snip of Minus j trying to be funny...>

>> PGMTT - what's that stand for? Professional Geezers Matching Tall Tales?
>;-)

Professional Group on Microwave Theory and Techniques.
One of the IEEE groups. Minus j seems to have no
contact at all with the electronic industry?

>> What is "Minus j M" supposed to mean?

Think complex quantities. With no real parts, only the
imaginary. That is much like the fundamentalist PCTA...

>> Tell us something we don't know, Len.

...what goes on behind the radio's front panel. Dickie
wanted to belittle Claude Shannon's work a couple of
years ago, claiming it had no effect on amteur
communications...but he did not want to acknowledge
that Shannon's Laws apply to ALL radio.

Minus j infers some sort of mystical "knowledge" of
everything in radio and electronics yet cannot talk
about it in detail. He, like Dickie, is mired in the
past with "knowledge of radio" gleaned only from

amateur radio periodicals.

>> >The
>> >Smith Chart is a tool to achieve that end quickly and efficiently.
>>
>> Yeah. High school stuff.

Now everyone knows that Minus j does not work in radio for
a living. A Smith Chart is a graphical form of complex
quantity presentation. Complex quantities are not part of
high school curricula.

>> That means it's OLD technology. From the days before cheap and plentiful
>> computing. It's error-prone and inaccurate, compared to more modern
>> methods. Why are you so stuck in the past, Len?

Minus j works at a sarcasm factory. In a low division.

What he is attempting to do is to somehow, vaguely get some
kind of connection, however tenuous, to the morse code issue.
It doesn't attach.

The first Smith Chart was in use just before WW2. It did not
become popular until published in McGraw-Hill's biweekly
"Electronics" magazine just after WW2. Its usefulness as a
tool became universal to all who worked at radio frequencies
worldwide...and remains today, still widespread, a factual
standard in the electronics industry..

"Morse code" was conceived a century before, not for radio
but for primitive electrical landline use. Landline manual
telegraphy was beginning to be replaced by teleprinters a
half century after its conception. There are no manual
telegraphy landlines now. Morse codings on radio now
exist only in amateur radio and a handfull of third world
countries. The FCC does not consider morse skill to be a
meaningful one in determining a grant for an amateur radio
license.

Write the FCC and hope they will make it an RM. The FCC
grants US amateur radio licenses. Licensees don't grant
licenses.

Just a thought...

Those last two sentences set the tone for the remainder...it is
what YOU had to do.

If you had to do it, then you seem to think that all others must
do the same. Why? Minus j, you don't grant licenses and
don't regulate any part of radio.

>>And you seek
>>that additional requirement because you feel that today's Extras are not as

Why should the FCC "make rules complex?"

>There have been incompetent hams of all license classes since there have been
>licenses.

Some even claim to be "masters of the Smithc chart." :-)

>The problem today is only partly due to the tests and the way they are given.
>Other causes are things like the high prevalence of manufactured gear and the
>influence of a "right now" society.

Sorry, but the predominance of those long-timers who want
to make a hobby radio service into some professional
service complete with rank, status, titles and privileges.
That's just self-aggrandizement...sitting up in that ivory
tower, pretending to be a "radio regulator."

As to wanting things "right now," the meaning behind that
is quite clear: Everyone must "progress through the ranks"
as it an AMATEUR radio activity was a professional guild or
union. Such "right now" blabber assumes that one MUST
do everything as it was done in the long-timer's youth.

That begs the questions, Who made the long-timer PCTA
eminent judge of everything? Who is the long-timer who
so self-righteously wishes to denigrate newcomers as
somehow "lacking 'proper' ethics/morals" in a hobby?

Answer: The self-important who set themselves up as the
superior example...even when they do not grant licenses
nor do they regulate any radio.

If their licenses were issued before the date, they obviously took the test before that date. That should be obvious.

The only concern is for those who took the test before a cutoff date, but the license is issued after that date. Generally, it is known that there was a licensing delay following most cutoffs, and therefore, the date where the FIRST licensee who took the examination AFTER the cutoff is the limit date whereby the date on the license can presume a certain test element. For our most recent change, that license cutoff would be April 19, 2000 - because that's when the first licenses under our recent restructuring were issued. Therefore, one could look at an extra class license issued April 18, 2000 and know that the holder had passed 20wpm (even though issued after April 15th) because no post-April 14th licenses had been processed until the next day. There are similar dates for 1987 and 1991, and these dates are known and have been published (but seemingly ignored by most except for a few VE's).

>>even TRY the test - that's what I had to deal with.
>
>Those last two sentences set the tone for the remainder...it is
>what YOU had to do.

As ususal, quoted out of context by Lennie the Limp.

His analogy point was that it's NOT like it used to be and that the
changes are for the betterment of the service, especially as it pertains to the
UNlikelyhood that the FCC would REcomplicate the licensing procedure.

And of course, we have to ask WHY you, of all people, make ANY point of
anyone who would even SUGGEST doing things "the way I did..."

YOUR whole reson for being here is because you think YOU are too good to
take the same exams that anyone today has to take...

You think YOUR "history" should make you exempt from ANY further
requirement of examination.

>Why should the FCC "make rules complex?"

Why, indeed.

>Sorry, but the predominance of those long-timers who want
>to make a hobby radio service into some professional
>service complete with rank, status, titles and privileges.

You are, as ususal, lying or grandstanding...I haven't fugured out which
yet.

>That's just self-aggrandizement...sitting up in that ivory
>tower, pretending to be a "radio regulator."

Grandstanding. I made up my mind.

>As to wanting things "right now," the meaning behind that
>is quite clear: Everyone must "progress through the ranks"
>as it an AMATEUR radio activity was a professional guild or
>union.

Nope. Just wonder if you are man enough to sit down with mere mortals and
take the test like the rest of us...Both "long timer" and the recently

licensed.

WE (yes, WE) know the answer to that, Your Cowardliness.

>Such "right now" blabber assumes that one MUST
>do everything as it was done in the long-timer's youth.

Nope. Just as it is done right NOW, by anyone else TODAY.

>That begs the questions, Who made the long-timer PCTA
>eminent judge of everything?

Which could also "beg the question", how does an UNlicnesed person decide
that THEY know better what we need...?!? Who appointed YOU as all-knowing or
wise?

Po/kettle/black. YOU think YOU are better equipped to make determinations
of what's good for the Amateur Radio Service without having any vested interest
in it.

>Who is the long-timer who
>so self-righteously wishes to denigrate newcomers as
>somehow "lacking 'proper' ethics/morals" in a hobby?

You are, Lennie. Everytime you get into your "long-timer" rants.

Like this one, for example.

>Answer: The self-important who set themselves up as the
>superior example...even when they do not grant licenses
>nor do they regulate any radio.

Bingo!

From: CAM <Cecil.A.Moore@IEEE.org>
Message-ID: <3BB38899.8070606@IEEE.org>
Source record: 21286

Followup on a thread from a few days ago. Here's what the Texas license plate form says: "Must regularly operate radio equipment that is both a receiving and transmitting set *in* the vehicle described on the first page."

Motorcycles give the *in* part a problem. There is no *in* to a motorcycle. Wonder if *on* would be sufficient?

Also: "The applicant may obtain radio operator plates for more than one passenger or light commercial motor vehicle titled in the applicant's name, that is equipped with mobile amateur radio equipment." "Equipped" may also give my motorcycle a problem. It is not my motorcycle, per se, but I, the operator, who is equipped with an HT. Have any other Texans succeeded in getting ham plates for his/her motorcycle?

>You'd like to think so, Dickie, but he's only living out his
>fantasies in here...as you are. Now stay with this message
>since you might learn something.

I first note that you call him "Dickie", Lennie. I find this humorous
since you decry the same behaviour in others.

Do unto others, Lennie?

>Minus j M made a funny of sorts. It would be funnier if he
>knew what he was talking about.

Oooops...did it again....

>>> We know, Len.
>
>Minus j may have read about it once in QEX. Perhaps that is
>the "mastery" he claims.

Ooops...Lennie, often whining about people not "debating the issues
without resorting to ad hominen attacks" still LOVES to make up little
endearments (Note the "Minus j" reference to Jim Miccolis) of his own.

Please note that Jim, however, calls him "Len".

>The comparison made by the Minus j M is noted...but it is
>still in use by professionals. If Minus j were really a
>professional engaged in radio design he would not be so
>depreciating.

His Putziness refers to Jim as "Minus jM" and "Minus j", yet goes on to
chide him for allegedly being "...so depreciating."

Damn, Lennie, you make proving what a two-faced trolling coward you really
are EASY!

>He hasn't stated his company's name. (those who feel good
>about what they do for a living are seldom hesitant about
>naming their company)

Why? So far nothing he has stated is, as far as I can tell, incorrect.
What has his EMPLOYER have to do with this?

>He hasn't made any technical comments on radio subjects
>other than amateur radio history or an electronic T-R switch
>supposed to be "featured" in the "Electric Radio" fanzine.
>"Electric Radio" is for vacuum tube radio fans.

WHOA YOUR PUTZINESS ! ! !

YOU are the one who is always whining about this is supposed to be a
"POLICY" newsgroup SOLELY about the Morse Code issue!

NOW you are calling someone to task for NOT discussing "technical" issues
to YOUR satisfaction herein...?!?!?!

LOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOL

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

>Minus j infers some sort of mystical "knowledge" of everything in radio and
electronics yet cannot talk about it in detail.

A lie. Jim discusses a great many things "in detail". Of course YOU
don't want to acknowledge those other posts since they generally tend to prove
what a complete and baseless idiot you are.

>Complex quantities are not part of
> high school curricula.

Not in YOUR day, Lennie. Been in a good high school math lab lately?

>What he is attempting to do is to somehow, vaguely get some
> kind of connection, however tenuous, to the morse code issue.
> It doesn't attach.

Yeah...right.

Anderson, do you think no one see's through you?

Do you think I am the only one who can see through your two-faced personal
war on Amateur Radio?

Do you really think your "arguments" and own personal vendettas are not as
transparent as air?

What exactly is your mental malfunction? Apparently, you weren't keeping up with the news, or you would have heard that NYC was looking for anyone with amatuer radio experience. Seems some your precious cell antennas were damaged or destroyed in the attack

But there's a larger question here. What the hell do you care if we have a newsgroup about an activity we enjoy? Why do you feel the need to rain on our parade? Didn't Mommy and Daddy show you enough love as a child? No one here ever said that ham radio was absolutely vital to rescue efforts. Take a few bucks out of the bank and buy yourself a life.

So it didn't happen?
For your information, there were networks running on repeaters around the clock for Red Cross. Some people worked over 12 hour shifts, had even operator from Canada. What did you do? Protest display of flags?

Yuri

The Icom 706 is the best 6 meter rig available.

It has Subaudible tone encode and decode built in

Also, I found out that the hustler mobile antenna resonates exactly in the
middle of the 6 meter band with no coil installed.

Have fun.

Steve,
I think highly of the 757GX--I bought one new in '86 and kept it until '98
when CAP began "hinting" about the NTIA standards. It was my first
transistor HF rig and gave me FB service thru out its career. I had the
almost
complete station--rig, FP757HP power supply, and the matching tuner. I ran
it as a base and a mobile until I bought a TS50 for mobile. I still have
the PS,
but it quit recently, so I put it on the bench and found a transistor blown.
I
have the transistor and will have it back up and running soon. Who knows,
I might find a good deal on another 757 and keep it for a backup rig. Right
now, I am using IC706s for base and mobiles.

Well, while I can't just go out and buy anything I want on a whim, I am finding
that my 706s do quite well. I bought one of the originals in '98(?) and a MKIIG last year. The original 706 is on the base and the G is in the car. I
have no need for another rig(s), so I plan to run these for a few years at least.
Everybody has their favorite rigs and, for me, the Icoms are quite the trick. I
may not be the loudest, but they work well, and I would think about as well as
one of those multi-thousand $$ rigs like the FT1000 or 756PRO. And "if" I should get married again, and my wife relegates my shack to a closet, they will
fit ever so nicely in some tiny niche. LOL! My ex, while a most pleasant girl
with whom I am still friends, persuaded me to put my shack in a den closet years ago. It actually worked extremely well, since I could slide the louvered
doors open and sit down on my chair. When company came, the doors went back shut and no one was the wiser! Now I have a larger house and the shack is downstairs in my cozy basement where I spend many happy hours doing what you, Larry, mentioned: ENJOYING ham radio!!

You got that right, Steve! LOL!

I'm in the same boat. When I got my 706MKIIG last year, I was looking to try the FT100D. Someone dropped a "bug" in my ear saying the Yaesus still had some probs. (I thought they were NTIA compliant, too). I bought the 706. Imagine my relief when I got home, checked the National HQ web page and found the FT100 was NOT compliant! YIKES! I almost made an expensive mistake! So whether the FT100 had probs or not, the fellow that button holed me did me a BIG favor!

Thats one of the radios I am looking at buing for my home when I get my ticket, I figured once i pass code and general test then I'll have one radio that will suit all of my needs. I am also looking into different HT's and a mobile for my vehicle, for that I'd settle for a decent 2 meter radio or possibly a dual bander. One thing I am looking for in an HT is rugged, easy to use/program. I am looking at the Icom a friend of mine has offered to sell me, can't recall exact model it is dual band, comes with extra battery packs and he'd sell it for $125, he keeps it in a padded briefcase similar to those you see people carrying their match pistols, or laptops in, it doesn't have a scratch or ding in it.

I have heard some mention that the MKIIG has some problems with intermod? and that it's filters are somewhat below par. Anyone have a comment on that?

Glorioski, Cecil is now a real live W five.

I tend to be more partial to Kinky Friedman and the Texas Jew Boys. 'They ain't makin' Jews like Jesus any more" twang. They were an opening act for Willie Nelson.

And in the line of lyrics, who can possibly forget Bob Dylan (Desolation Row):

Every one is having sex or else expecting rain.

Dick Bionic Klutz

4960. Re: Place Vote:How Many Hams use Single Banded 10 Meter rigs.

Ryan,

I see TS50s (Kenwood) on the rec.radio,swap go for as little as $475. This
little rig is about the same size as one of those single-band 10 meter
units, but
has all bands/modes from 160-10 meters. For around $500, you can pick up
an original Icom 706 which has the above plus 6 and 2 meters. With that,
you
get, in addition, a scanner, general coverage receive and aircraft receive
as well.
Quite a good deal. The MKIIs go for around $600. I would tend to agree
that
you would STILL be better off to wait till you have the money in the till to
go with a multi-band HF rig. Watch the hamfests, swaps and newsgroups where
you CAN get a good deal on one of them. If you go out and spend a couple
hundred for a single band rig, that money is gone with which you could get a
bigger bang for your buck. Have a little patience, and you will be glad you
did.

But, Leland,

You know that the TS50, FT100, DX70, and the 706s are about the same
size and weight as those single banded rigs. Might be a "tad" heavier, but
fits easili into a back pack.

Kim,

It's a given that we all have either been ridiculed OR have done the same in return. I don't pay a lot of attention to it. I was born in the South (Arkansas)
and moved to NC when I was around 7 years old. More Tar Heel than Razor-back, I guess. I never understood all the mocking of accents, or their signifi-cance as a "gauge" of one's intelligence. I always found Hollywood's pitiful
attempts at doing a "Southern" accent somewhat insulting, however. "Waal. Mistuh Sher-uff, to whaat do we owe the play-shuh of this h'yar visit? Ah do
dee-clah-uh, we sho' 'nuff ain't awah-uh of no mis-cheef arou' hee-uh." I never heard anybody talk that way in real life! Them thar yankees would be surprised to find that here in NC, one can find, at least, three different dialects:
mountain, piedmont (the 2 are close, tho), and the coastal. The folks in and
around the Outer Banks have a peculiar accent, one that "can" be difficult to
decipher until one lives there for awhile. Often called "hoi toiders", they pronounce many words in their own way. For example, "house" can be "hice" (rhyme with "mice"), or "hay-use" (spoken quickly). "Sound" can come out as "say-und", or "synd" (rhyme with "hind") "About" may be said as "aboot", or "abayt" ("a-bite"). If you have listened someone from around Richmond, Va, you have heard a version of this same dialect--Peter Jennings has a hint of this
in his speech. Moreover, their inflections and emphasis on certain syllables are
different from that of "most" southern dialects, sometimes making it almost impossible to understand what they are saying. I moved there from the Western Piedmont in the early 60s and had a hell of a time understanding my high school teachers, not to mention my classmates. Once I lived there for a few months, I was able to decipher this dialect made so difficult by multiple ways of pronouncing the same word, the different slang used, the clipped way
it was delivered, and even words I had never heard before. This dialect has its
roots in Elizabethan English because of the early colonization along the NC coast, and I soon found that those "strange" words had been carried forward all these centuries even when the rest of the country had long forgotten them.
Like the word "strumpet"--an ancient English word meaning "whore" or "harlot". Can you imagine a 15 y/o old kid (me) hearing someone say. "oi

c'nt
foind (find) me flat tape (tape measure). oi knows th' strumpet cudna got
ayten
de hice--gotta be aboot s'ummers". I learned a whole new language and never
left the state! LOL!

What about the society where every Mom and Dad began working just to get ahead, then every kid (nearly) was in daycare learning the same things, coloring the same way, eating the same foods, etc., until they got into school where it was more of the same, then the kids started rebelling (not consciously) out of frustration and started acting out in some pretty drastic ways, etc., etc.?

There are Orwellian concepts in all societies in today's world. I don't think George Orwell knew of the Taliban when he wrote the book on it. ;)

Anyone who has read here any time at all knows that those are your words, not mine, and they also know who covers his crap like a cat and who tells it like he sees it.
It takes no particular genius to see the true status of code proficiency among hams, and how seriously it has degraded since the introduction of the no code Tech license. The no-code tech, with the highest numbers of license holders, has none who have any code proficiency whatever, and with the 5wpm maximum speed, that effect only broadens drastically in scope. So it's the fault of those who point out this trend who are to blame for it. Right.

I don't think you've got any serious number of readers fooled.

No, this is NOT a "war of cultures". It is a response to an attack
by a bunch of religious fanatics. Just like many other fundamentalist
groups, they have no tolerance for those who hold beliefs in variance
with their own. We have examples of that here in the US, from Christian
fundamentalist - such as those that bomb abortion clinics or try to
murder doctors who perform abortions.

Coventry at least had some military significance. The Dresden raid, to
whatever extent it was not simply having neat planes and nothing to do with
them, was a terror attack pure and simple.

>air recently?

I hear all sorts of stuff on the air. Depending on when and where one listens,
all sorts of stuff can be heard. I have consistently found that the
best-behaved ops are on CW, though. Just my opinion.

WHY it's happening is another issue. Here are some possible causes:

- Lack of good examples
- Bad habits brought from other services
- Increasing prevalence of manufactured gear that does not require technical
expertise to make it work

>The lowering of standards to increase the numbers in ham
>radio is unacceptable to me.

The license test requirements are only the entry standards.

For something completely different, there's the truly wonderful Loudon
Wainwright III. About five years ago, he managed to surpass his well known
"Dead Skunk In The Middle Of The Road" with a new song, "I Wish I Were A
Lesbian".

Thanks! And thanks to all who recalled that one. While not strictly a "Teen
Death Song" in the tradition of "Tell Laura I love Her", "Teen Angel", or
"Patches", it deserves honorable mention.

Unfortunately it was never sung by William Shatner, Leonard Nimoy or Julie
London.

Ditto!

I heard just two lines of a song parody the other day. Remember Neil Diamond's croaking rendition of "September Morn"? Simply replace the phrase "September Morn" with the words "Internet Porn" at each occurrence in the song, modify a few other lines, and it takes on a whole new life! Rhyme scheme and meter are completley unaffected. BWAAHAAAHAAA!

Who did you debate with?

> W6RCA was my third call, a requirement of the
> FCC in those days.

That makes KG7BK your fourth call, right?

> I haven't got my paper license yet.

Takes a while. Doesn't matter, the FCC database is the authority,
anyway.

> How did you know I changed calls?

BWAAAHAAAHAAA! Mental telegraphy.

Actually, it was obvious. Your call always used to appear in your
posts somewhere - usually more than once. At the very least, it was in
your signature line.

Then all of a sudden all mention of W6RCA disappeared completely. It
was clear something was up. An occasional check of the database via
qrz.com or arrl.org took only seconds. I missed the actual event by

only a day or so. Hope you don't mind that I "outed" you.

"Everything old is new again" (from "All That Jazz")

How many years ago did you give up W5DXP? Must feel strange to use it again.

Did anyone have W5DXP before you?

I've only had 3 calls in my 34 years of hamming: WN3IYC, WA3IYC and N2EY. I'm the original owner of all of them, unless N2EY was used as a tactical call during WW2. Present call was sequentially issued in 1977 when I moved to 2-land. Would be nice to be able to use the old calls once in a while but I wouldn't want to have to use it all the time.

Jim

What about a "hands on" supplement to all of the tests? It could be
something like, build a dipole and make
an on the air contact with it, or erect one and measure the SWR. This is
pretty basic stuff. It's one thing to memorize
the questions and answers, but quite another to put them to actual use.

I realize that this would be imposing a new requirement that many previous
licensees did not have to endure.
That might be unfair, but then, there are some of us that feel it is unfair
that these new extras don't have to pass
a 20 WPM code test and now have the same privileges.

I have heard arguments that passing a particular test only verifies entry
level skills for the class.
I can go along with that for all classes of license except extra class.
IMHO, we should reserve the extra class
for those who have proven they have exceptional skills when compared to
peers. How we might do that certainly
would be controversial.

I feel we should do away with the incentive licensing system. I have never
figured out what purpose it really serves, other
than to divide the amateur radio community. Other countries have simple
licensing systems such as beginner or vhf/uhf only
and the next step is simply full fledged ham operator with all privileges. I
don't hear people from other countries arguing
about this kind of stuff. Why are we so different in this country??

If we are going to continue to support an incentive licensing system (which
I think is ridiculous), then why not make sure
the top level license is inhabited by the most skilled? As an Advanced
Class licensee who took the test before the FCC
in the early 70s, I feel I would be downgrading were I to take the current
extra class examination.

Please hold all insults because they won't influence me in any way. I am
however, ready to listen to thoughtfully prepared
responses.

You be kind to Julie. I expect more people know her as Dixie McCall from
Emergency. Over the period of that show she was married to both Jack Webb
and Bobby Troup, the latter better known for writing Route 66.

Remember when amateur radio VHF/UHF repeaters had to
be separately licensed? The licensee had to file a
pile of paperwork with the FCC comparable to that for
an FM broadcast station (ERP, HAAT, co-channel
separation, system circuit diagrams, etc)? I think
this was in the late 60's or early 70's. It was a
ton of work for anyone who wanted to put a 'machine'
on the air. But repeater groups and individual owners
complied and remained in operation.

Later, I think it was when the Reagan administration
came in and throttled back the regulatory zeal of
government agencies (including the FCC), the onerous
licensing requirements for repeaters were lifted and
interference issues passed on to the coordination groups.
Although this scaling back in licensing requirements
was universally recognized as a 'good thing' for the
ARS, there was an awful lot of grumbling from the
repeater owners about their accomplishments in getting
repeater licenses being squandered and nullified.
I was left with the distinct impression that, had
there not been an overwhelming consensus against
the regulations, many of the repeater licensees
would have preferred to keep them in place so that
their (far fewer than now) machines would stand as
monuments to their hard work and perseverance.

This episode confirmed for me once again the futility
of seeking personal status and validation from the
external symbols of an institution (FCC, university,
lodge hall, whatever). Licenses are just a necessary
evil to reassure the Government that some kind of
order will be preserved on the airwaves. The sense
of self-worth that is sought ultimately must be
derived from one's own life experiences and self-

knowledge.

>the 706 is a multi mode multi band rig. So its not just a 6 meter rig. I
>think he is looking for just a 6.

All of the rigs that have been cited by the numerous correspondents here
have been good rigs.

The REAL question to ask is the one the original poster should have asked
himself..."What do I want to accomplish on six meters..."

Any answer (including my own) is simply the opinion of what the respondent
likes...not necessarily what is "best".

(1) What do I want to accomplish? (Weak signal, FM, DX, data modes)

(2) How much can I afford?

(3) What specifications would I like?

(4) Am I really serious about this? (Do I want to commit to the
purchase?)

From there you can get an idea of what is "best" from the options
available.

>Who the hell needs 440.

I guess you don't ! =)

The funny thing about "hint"s of accents is that they all sound alike.
Peter Jennings is Canadian, from Toronto, and probably hasn't lived
much further south than New York.

I've noticed that there are some odd accents in more isolated places
along the south-east coast, however. I've heard people living on
islands along the coast of Georgia who could speak like Jamaicans
when they put their mind to it. And a friend with a boat once took
us to an island in Chesapeake Bay (I suspect it is in Maryland, though
it could be far enough south to be Virginia) where the people sounded
like they could have recently got off the boat from some odd corner
of England.

I used to work as the kitchen supervisor of a truckstop along US 24 in N.W.
Ohio.
We had a jukebox there with a cd that was a compilation of Ray Stevens
greatest hits.
One song I had never heard before was his rendition of the classig Glenn
Miller tune "In The Mood", first time I heard it I laughed my a$$ off. And
since I have a warped sense of humor and an eclectic taste in music that
became the mostr played song on the jukebox, the waitresses hated that song,
and of course once the truck drivers found that out, they played it as well
just to drive them crazy. Even the drunks who came in on weekends after the
bars closed played it. The girls all signed a petition to get that cd
removed from the jukebox, the company said no because it was the "most
popular" hence it was a money maker. It is now 2 years since I quit theree,
and that song is STILL the most played song on the jukebox.

>monuments to their hard work and perseverance.

Not to mention that machines seemed to have far greater use, too. It's disappointing to know that I can access 15-20 machines from my QTH and can caount the number of QSO's I hear in a day on my fingers.

Despite the "blossoming" number of licensees, especially in the VHF/above classes, there sure isn't a corresponding rise in activity. In the 70's, you could call "QRZ" at 5AM and get two or three responses.

My question...do we REALLY need all those repeaters...?!?!

I did read it and it said clearly "what you had to do."

QED

>My recollection of what I did was simply to point out to W5NET that "older"
>hams like myself did indeed have to meet such requirements.

...which indicates that "you had to do it."

QED

>>Minus j,
>
>Why do you make fun of people's names, LHA? That sort of thing is considered
>immature by third-graders.

Anyone who claims "mastery of the Smith Chart" and then
cannot talk about it in detail is a poseur, a fake claimant
who acts like a "third-grader." "Third-graders" get "third-
grade" response.

If N2EY wishes to be a radio cop, then he can go around
criticizing others for using immature language. There are
plenty in this newsgroup.

>>you don't grant licenses and don't regulate any part of radio.
>
>Neither do you, LHA. Does that mean I don't have the right to an opinion on
>license requirements? You seem to think so.

Wounded again? N2EY cannot stand negative criticsm in
the open.

>>Why should the FCC "make rules complex?"
>
>To serve the needs of the radio services.

Insufficient explanation, a generality.

While taken out of context, the original pertained to amateur
radio regulations. Why should the FCC make amateur
radio regulations complex?

Please use more detail in "explanations," be specific.

>>Some even claim to be "masters of the Smithc chart." :-)
>
>Not me. I just know how to use it. And how to use Morse. And a bunch of other
>ham radio stuff. They're not mutually exclusive, y'know.

N2EY has never stated enough in detail about Smith Charts
to justify one single thing of his mention of them...only said
that he was a "master" of it. Now there is the recant of he
"just knows how to use it."

Says nothing at all, is merely a claim.

>Are you "master of your own domain", yet, LHA?

Have you stopped beating your wife? (that's in the same
league as the above "question")

Why does N2EY interject common phrases that have
nothing to do with amateur radio?

To borrow from Bromley, I can work quite well in the
frequency domain, the time domain, the S domain, the
Z domain...enough to perform a design or measurement
task successfully. I do not claim to be a "master" in
such things other than not dissatisfying any employer
or an editor.

Can N2EY prove he is the "master of the Smith Chart?"

He made that claim twice. It's time to prove it.

Talk to us about N2EY's "mastership."

Or go back to some "amateur radio" subject about "old,
bad songs" currently in progress in another thread.

>the questions and answers, but quite another to put them to actual use.

If amateur radio were a professional craft/guild, the above
would be a reasonable request...except for the practicality
of setting up this new test. Neither the old FCC field offices
nor the average VEC test location had/have the area or the
capital equipment to perform "practical" tests.

This sort of massive test restructuring would add an undue
burden on the VEC. [the first letter of the acronym stands
for "volunteer"] They would have to keep test equipment,
maintain it, apply it, and know how to use it. If each test
session had an examinee's fee of a thousand dollars or so
it might be possible.

>I realize that this would be imposing a new requirement that many previous
>licensees did not have to endure.
>That might be unfair, but then, there are some of us that feel it is unfair
>that these new extras don't have to pass
>a 20 WPM code test and now have the same privileges.

That's an emotional thing which cannot be overcome by such
a massive (gargantuan?) testing environment. Technology
has always been advancing in radio...radio is only 105 years
old. No doubt there were amateurs who "knew everything
about spark transmitters" in the old days and resented the
prohibition against damped wave generation. No doubt those
old sparkies resented the hell out of "new" (for its day) tests
that had questions about vacuum tubes.

>I have heard arguments that passing a particular test only verifies entry
>level skills for the class.
>I can go along with that for all classes of license except extra class.
>IMHO, we should reserve the extra class
>for those who have proven they have exceptional skills when compared to
>peers. How we might do that certainly
>would be controversial.

Why have the emotional baggage loading of "extra" with all
the status-rank-privilege attachment PLUS this massive new
scheme for testing one particular class? Go one step further
and change "extra" to "expert" and complete the baggage cart?

What purpose does that serve what is essentially a hobby
activity?

It doesn't serve any purpose for the group, only individuals.

>I feel we should do away with the incentive licensing system. I have never
>figured out what purpose it really serves, other
>than to divide the amateur radio community.

The FCC grants licenses, not the "amateur radio community."

The FCC has extended their hand to the "amateur radio
community" as much as possible by permitting the VECs
to formulate both questions and answers and do the
license testing. The VEC examiners are amateur
licensees. To suggest a massive, "practical" test system
as proposed would place an undue burden on the VEC
and therefore on a part of the "amateur radio community."

It doesn't seem reasonable to expect the VEC to
accept a massive testing environment requirement just
for the sake of a minority group within the ARS. Especially
so when the whole purpose seems to be for extras wanting
to have some rank-status-title above and beyond others in
the "amateur radio community."

>If we are going to continue to support an incentive licensing system (which
>I think is ridiculous), then why not make sure
>the top level license is inhabited by the most skilled? As an Advanced
>Class licensee who took the test before the FCC
>in the early 70s, I feel I would be downgrading were I to take the current
>extra class examination.

There has to be some further definition of "the most skilled"
to justify a "top level license." Is "the most skilled" label
for any regulatory purpose (the real basis behind the license
of any radio operator license, amateur or commercial) or is it
some self-defined, "I am the greatest" label useful only for
waving in front of "lesser qualified" amateurs?

Is "the most skilled" level to be restricted to HF
communications? If so, why? Should it include the
spectrum above 30 MHz? If not, why not? There is far
more bandspace for amateurs above 30 MHz than
below 30 MHz, more "room" to experiment, far greater
ranges available than terrestrial DX..

Finally, what good does it do to maintain this separatist
"practically-tested" new amateur extra class? Does it serve

any purpose in attracting newcomers? Or is it just a very
personal thing among those of "higher rank" who wish a
federal subsidy program to support their personal titles?

>>My 8752 told me so and the 415's needle confirmed the
>>vizwar shown. Hand me that 3/8" wrench to tighten
>>those SMAs. Or was it the Duroid that got squashed?
>
> Wrong again....acutally your hexical jackshaft limiter relay failed
>preventing the coaxial capacilator from acutating.

...heh, heh, I just KNEW that this was coming!

An "8752" is a network analyzer from Agilent (the old H-P Test and Measurement group). Its display is in Smith Chart format. The H-P "87nn" group of analyzers are general-purpose instruments for measuring networks and components up in the VHF through microwave region (where hams are allocated a dozen bands). The displays of those instruments are in Smith Chart format.

A "415" is an old and reliable AC voltmeter specifically designed and calibrated to read VSWR (Voltage Standing Wave Ratio) on bench-top reflectometer setups (a slotted line is one of the basic "reflectometer" arrangments). The "415" is four decades old as a product and was still being sold by H-P in 1993.

An "SMA" is a common connector originally intended for semi-rigid coax lines and then made available for small flexible coax. It requires a 3/8" wrench for tightening. SMA types have better broadband performance than BNC or TNC types and better than most type N. Those are all in the same power-handling category.

"Duroid" is a trade name for a commonly-used teflon-fiberglass substrate available with copper foil of various grades. Call it a VHF-through-microwaves "PCB."

"S-sub-11" is a "scattering parameter" that indicates the input condition of a generic four-port network. "S-sub-12" is another scattering parameter that indicates the forward gain or loss of a generic four-port network. That network can be a passive or active component, a box, a whole system. Scattering parameters can be displayed on Smith Charts.

A lower-case Greek letter lambda refers to wavelength in formulas. A lower-case Greek letter epsilon refers to dielectric constant relative to air; it is common to grade stripline substrates (such as Duroid) as to their epsilon or dielectric constant.

NONE of what I wrote is gibberish...anyone who has worked in the HF to microwave region will recognize the terms, names, and jargon ("vizwar" is the common pronunciation of 'VSWR'). Except for scattering parameters, all of the terms I mentioned can easily be picked up on-the-job without requiring formal classes (either during the day or at night classes). Hewlett-Packard Test and Measurement (now Agilent) has a nice tutorial on Scattering Parameters available for free on their website. Mine is in print, used for self-study since my formal classes did not include S-parameters.

No radio amateur need be concerned with any of that for "working DX on HF with CW." They can buy their equipment and memorize sales ads in QST and pretend to be "experts at radio technology." They can also sit around in front of computers (which they know even less about) and blabber gibberish, call others names, and generally make themselves appear the damn fools they are because of a piece of paper from da gubmint.

Be thankful that some folks who worked in radio and electronics designed the ready-made radios that all the "pretend experts" use and compare (usually without knowing a damn thing about the terms they got from memorizing ad copy).

Pretend all you want. Pretense shows up on everything you write.

On a massive scale, no they wouldn't, but I don't think it would be difficult to have a prospective licensee demonstrate very basic skills such as soldering a microphone connector or troubleshooting a power supply that has a missing part...

Well, I actually feel that there shouldn't be any classes at all.I am in
favor of a much simpler scheme like Novice and General, period. I can't
speak for others, but I wouldn't mind giving up my semi-exclusive slice of
spectrum to a General..
> What purpose does that serve what is essentially a hobby
> activity?

>
Many hams today consider it just a hobby. I think they have an incorrect
perspective, it should be much more than a hobby and the rationale for
existence does not include anything that really relates to "hobby.

Many rules and regulations have been made by the government over the years
and many have been changed or overturned. We must obey them until they are
changed.
To do otherwise is simply being complacent.

>

IMHO, the FCC and the government have copped out by dumping this requirement on the ham community. Just about every other country in the world closely regulates their amateur radio services. Witness the relative ineffectiveness in enforcing rules and regulations.

Remember the Conditional Class license? It was administered by well meaning volunteers, but lot's of inequity surfaced and the whole thing had to be scraped.
Notice how many VE sessions are being questioned by the FCC these days? The government should take control of the testing, like they used to.

Again, I am in favor of getting rid of incentive licensing. I don't think there is any necessity to have an Advanced or Extra class license or separate privileges for either.

Steve, just had to add my two cents worth about who needs 440. Ah .. dumped some bucks into the house (and a ton of appliances, including a 36 in TV) so I have to wait to get back on HF. I had gone through 5 grand in only a couple of months (roof, boiler, you name it). Now the stakes are up to 10 grand. Oh well. So I'm stuck on 440 FM. HT at that! Bwaaa! I have used repeaters over 100 miles away with this HT. Through repeaters, I'm pretty well set for western and northern New York. I do have fun though. Lemme see .. no internet on the repeater (here, anyways). Nice hearing Josh, 6Y5WJ in St. Eliszabeth, Jamaca on the 19th. Had a lovely chat (full quieting, beautiful FM) with a couple of VKs in Brisbane, Australia about a month ago. Yes, Europe comes in nicely. My former neighbor in Wellsville, NY, hears me on a handheld scanner with a coathanger for an antenna. Wellsville is over 100 miles away by car (and likely 80 miles as the crow flies). Hmm ... opened a Pennsylvania repeater today on the handheld (yes, I was cheating. I was on the 22nd floor of a building which is a few hundred feet up on a cliff over the water). 2 meters is sort of crowded around here and I enjoy 440. Besides, that 10 meter port on the thing makes for interesting times (that is how come the VKs, 6Y5, and others. Ooops - nice chat last night with a 6 in Montigo bay. Forgive any spelling errors. No spell checker. Heck, can't find my logs either. Oh well ...). No, 440 is not a be-all, end-all, but it can be a lot of fun (especially if you check out what is really happening in your area).

What a mean spirited post. Of course there are others who have
volunteered. I'm very sorry that you feel the need to say such things.

Thank you. It is easy to talk on the subject about the subject.
:-)

>On a massive scale, no they wouldn't, but I don't think
>it would be difficult to have a prospective licensee demonstrate very basic
>skills such as soldering a microphone connector or troubleshooting a power
>supply that has a missing part...

That seems reasonable to me...but the testing group has
to agree on the hardware so that all the tests are
sufficiently alike. That must be a given to avoid inequity.

Stepping out of the subject loop a moment, there will no
doubt be some complaints that "it should be a key, not a
mike that is soldered" or "how many pins should there be
on the connector>" That will derail all coherent subject
discussion quickly...:-)

The black mark slobbered on the present-day testing is
the public availability of correct answers. This could be
reduced by simply making the Q&A collection larger
than the minimum. The FCC specifies only the
MINIMUM number of pool questions...doesn't say anything
about a maximum. The maximum is up to the VEC QPL.
With quick distribution through the Internet there should
be no real problem with a question pool twice as large
an now, three times, or even five times larger.

There is a point in the number of "public answers" where
only that rare person who is a mnemonic savant can
keep all the correct answers in mind. If a present test
element requires 50 questions, the question pool must
have 10 times that many. That's the minimum. Some
might be able to "just memorize" 500 questions and
correct answer pairs. I don't think so since it would be
far easier to know the subject.

If a question pool were doubled to 1000 questions, would
that satisfy the detractors? Tripling it to 1500 or going
larger to 2500 questions? The thought of trying to
"memorize" the correct answers to 2000 questions is

FAR more work than actually knowing the subject well
enough to see through distractors.

It's really up to the VEC QPL. They can generate the
questions, I'm sure. Distribution, application, and
selecting individual test questions for an individual
exam is not in question.

>Well, I actually feel that there shouldn't be any classes at all.I am in
>favor of a much simpler scheme like Novice and General, period. I can't
>speak for others, but I wouldn't mind giving up my semi-exclusive slice of
>spectrum to a General..

Is there any slice of amateur spectrum above 30 MHz
that is exclusive to extra, advanced, general, tech-
plus or tech? :-)

I don't think that is in the arguments against the
alleged "dumbing-down" of the amateur test. It seems
far more likely that the objections to today's testing is
in the personal desires of the complainants; i.e., all
have to do it like they did it. :-)

>Many hams today consider it just a hobby. I think they have an incorrect
>perspective, it should be much more than a hobby and the rationale for
>existence does not include anything that really relates to "hobby.

That may be or not be the actual case. Certain words must
exist in the regulations to justify the existance of this
particular radio activity. Without those words it is possible
to lose spectrum or even the entire radio service.

At question there is whether or not amateur radio actually
does the "service" or performs as stated in 97.1. Yes, it can
be of emergency help to a community during an emergency
but four of the five paragraphs of 97.1 are seldom brought up.
Does the amateur radio service really "provide a trained pool
of radio operators or radio experts to enhance the nation?"
Does amateur radio "contribute to international good will?"
[count the number of wars and armed conflict in recent
memory and answer that intelligently]

>> The FCC grants licenses, not the "amateur radio community."
>
>Many rules and regulations have been made by the government over the years
>and many have been changed or overturned. We must obey them until they are
>changed. To do otherwise is simply being complacent.

Another question is WHO is being "complacent?" It is not in
the Communications Act of 1934 nor the Telecommunications
Act of 1996 that the FCC act as a "teacher" of "skill improver"
of anyone in any radio service. The FCC is not chartered as
an educational institution. The FCC is tasked with regulating

United States civil radio services, all of them, not just amateur
radio.

The FCC is open for comment from any citizen on any of its
activities. That includes what individuals feel the FCC "should
do." Many of those "should dos" are not within the FCC
charter. If there "should be" a very major restructuring of all
radio laws, then it is up to Congress to change it to have the
FCC do what it "should do."

>IMHO, the FCC and the government have copped out by dumping this requirement
>on the ham community. Just about every other country in the world closely
>regulates their amateur radio services. Witness the relative ineffectiveness
>in enforcing rules and regulations.

I'll have to argue "relative ineffectiveness." Commercial radio
serivices seem unaffected by privatization of radio operators
and that includes privatized frequency coordination of
commercial radio services sharing the same band. A look at
the FCC Enforcement page and clicking on the collection of
violations will show that there are far more violations handled
in the commercial radio area. One reason is that the
commercial radio services are now much larger than amateur
radio. Another reason lies in the self-perception of "violations"
of certain radio amateurs. Are those real violations or are
they just "different" from what has come to be "proper
behavior" over the years?

That same Enforcement Bureau also lists violations done by
radio amateurs and in some cases that results in heavy
fines and loss of licenses. Its all publicly available.

>Remember the Conditional Class license? It was administered by well meaning
>volunteers, but lot's of inequity surfaced and the whole thing had to be
>scraped.

The Conditional class license came into being when there
were long distances to travel to FCC field offices and transport
was quite expensive. The "conditon" of Conditional was not in
the test itself but had to do with travel distance.

>Notice how many VE sessions are being questioned by the FCC these days? The
>government should take control of the testing, like they used to.

That's a BUDGET matter. If the FCC scraps privatization of
testing then they must do it for commercial radio as well,
ramp up lots more field offices, get more personnel for all
those field offices. There was nothing in the works before the
Attack on America to "take control of testing" as in the 80s
and there is certainly a scarcity of federal money to do it now.

Those that want the government to "take control" should get
with all those pre-1980 folks who demaned the government

"give control of amateur radio to the amateurs!" You can't
have it both ways. One or the other.

It looks to me like the "amateur radio community" got what
it was after in the 80s. The VEC do the testing. Now the
VEC QPL makes the question pools without being
constrained by a certain number of topics per written
element. The FCC does the bookkeeping and sends out
those all-important credentials. Oh, and the FCC
Enforcement Bureau still goes after violators...in ALL radio
services.

>Again, I am in favor of getting rid of incentive licensing. I don't think
>there is any necessity to have an Advanced or Extra class license or
>separate privileges for either.

Okay by me. I said the same thing on 98-143 on 13 Jan 99. :-)

Oh? How is news of two very much radio-related corporations
donating funds and equipment to a stricken area "mean?"

>Of course there are others who have volunteered.

Damn straight there were!

>I'm very sorry that you feel the need to say such things.

Oh? How so? Because I didn't hew to the mantra to
idolize amateur radio contributions and volunteerism?

Is it some kind of "dishonor" to mention that four Raytheon
employees died on those hijacked aircraft?

Motorola shipped EIGHTY-SIX TRUCKLOADS of radio
equipment to NYC and DC, employees putting in many
extra hours to deliver well ahead of normal shipping.
Do you know just how big 86 truckloads are? Let me give
you a hint: The average HRO store has about one truck
load of equipment in its back storeroom.

Did you notice that Motorola GAVE AWAY some of the
equipment?

I'm puzzled that you show "disgust" at such "odious"
mention of volunteerism by anyone not a ham in a
disaster situation. Now you go back and mumble the
sacred mantras of "CW gets through when nothing
else will" and "the cellphones all fail during a disaster."
Will that make you happy?

Oh, and "RF Design" magazine in a trade publication.
Search for it on the Internet. That will get you a web
address where you can complain directly to them
about posting such "mean spirited" news.

Keith,

I can't really comment on the intermod probs, but, in my case, it hasn't been
enough of a problem to cause me to dislike the 706 series. The only thing I
DON'T like is the squelch circuit; there is NO hysteresis at all. It is either on
or off. If you set it just on the threshold to catch weak signals, it pops in and
out; if you set it deep enough to stop the squelch, you *can* miss weak signals
or distant repeaters on FM. I hope to acquire a diagram to see if I can "soften"
the squelch a little. I haven't studied the squelch circuit in the absence of said
schematic, so I don't know if this will be difficult. Some squelch circuits can
be "softened" by increasing the value of a capacitor thereby adding a little "tail"
to the squelch and allowing the weak signals to get thru before closing.

All in all, the 706 is a great little rig because it gives one most all bands 160 thru
70 cm, general coverage receive (great for monitoring VHF emergency
services), and scanning as well.

5015. Coming Soon! Kabul International Airshow!

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-29 03:56:08 UTC
From: k4yz@aol.com
Message-ID: <20010928235608.27388.00000668@mb-fm.aol.com>
Source record: 21159

First Annual Kabul Air Show Scheduled
Kabul, Afghanistan 17:52GMT - Sept. 27, 2001

Citizens of Afghanistan are reportedly looking forward with great anticipation to reports of an international air show to be held in the skies over their nation.

An unnamed official informed us that "Now the rest of the world will look upon our beloved city with great honor just as they do Farnborough, England and Paris, France", referring to the sites of two other famous international air shows.

The exact date and time of the upcoming Kabul International Air Show has not yet been announced. It is believed that event organizers feel that such an announcement would detract from the fun of the celebration by, "spoiling the surprise".

Unlike most air shows the Kabul Air Show will feature almost no static ground displays but will have an unusually high number of aerial demonstrations and fly-bys. "We are most pleased by this feature of our air show. Instead of a lot of different kinds of airplanes just sitting around on the tarmac, the aircraft attending our show will actually be up in the air demonstrating what they do best!" we were told.

Participation will probably be heaviest by aircraft of the United States Air Force and Marine Corps. Including appearances by F-15's, F-16's, A-10's, B-52's and Apache helicopters. It is rumored that opening ceremonies will feature a tomahawk-cruise fireworks display. A few B-2's, and F-117A's may also help out in some unseen capacity.

Several other counties have expressed an interest in sending representatives. These include all nineteen nations in the NATO alliance as well as Australia. The excitement generated for this gala event has even prompted the Israeli Air Force to apply for participation.

Of course, no one is more excited than the Afghan people themselves. Great numbers of them are in the streets of Kabul looking constantly heavenward in gratitude for the historic event, which will soon take place in their skies. It has been observed that some are so concerned about missing the show that even as they bow to the East they keep snatching worried glances towards the West. Thousands, in fact, have been seen leaving the city and fleeing to the mountains carrying food and blankets - obviously anxious to get a good vantage point for the air show, and to make a picnic of it.

I don't remember that at all. The main complaint I remember was the loss of the special "WR" calls and the problems of frequency coordination.

Good point! I would state it a little differently, though. As I see it, the license is only one "data point". What one does after the license is earned is far more important.

Bob,

I'm going to take a "devil's advocate" role here. As I see it, the main problem with any change to the requirements is that there will be a group who says they are "unfair".

The FCC has made it clear, through their statements and their actions, that they want the minimum testing necessary.

It is good that you are discussing the subject here, to get various opinions and work out some sort of solution.

In article <Ty0t7.528$Le.20895@sea-read.news.verio.net>, "Bob Raymond" <braymond@iea.com> writes:

>Jim
>

>the questions and answers, but quite another to put them to actual use.

I like the idea. The problem is the implementation. What, exactly, would be an adequate test at each license level? Who gets to judge whether the test has been passed?
>
>I realize that this would be imposing a new requirement that many previous
>licensees did not have to endure.

Exactly. The last time that happened was in the 1930s.

>That might be unfair, but then, there are some of us that feel it is unfair
>that these new extras don't have to pass
>a 20 WPM code test and now have the same privileges.

For at least the past 25 years, the trend has been to make the licensing process easier for new and upgrading hams. In some ways that's good and in some ways it's not so good. Whether the overall effect is beneficial to the ARS is a matter of opinion.
>
>I have heard arguments that passing a particular test only verifies entry
>level skills for the class.
>I can go along with that for all classes of license except extra class.
>IMHO, we should reserve the extra class
>for those who have proven they have exceptional skills when compared to
>peers. How we might do that certainly

>would be controversial.

Actually, ANY pass/fail test simply shows that the person who passes it has the minimum qualifications. What you're talking about is a more comprehensive form of testing. As it is right now, a person can have huge gaps in their knowledge and still pass the test because of knowledge in other areas. That's how you get the "Extra who can't build a dipole" - that person knew enough in other (non-antenna) areas to pass the tests.

One possible way to fix this is to break up the test into subtests, or sections. For example, there could be sections on safety, regulations, operating practices and electronic theory, each marked separately. To pass, a person would have to get a certain number of questions in each section right.
>
>I feel we should do away with the incentive licensing system. I have never
>figured out what purpose it really serves, other
>than to divide the amateur radio community.

The basic idea was exactly what you are talking about: insure that the hams with all privileges have more-than-basic technical knowledge and operating skills. The idea was to reward greater knowledge and skill with more privileges - namely, more spectrum.

>Other countries have simple
>licensing systems such as beginner or vhf/uhf only
>and the next step is simply full fledged ham operator with all privileges.

That's still a form of incentive licensing.

> I
>don't hear people from other countries arguing
>about this kind of stuff. Why are we so different in this country??

I really don't know.
>
>If we are going to continue to support an incentive licensing system (which
>I think is ridiculous), then why not make sure
>the top level license is inhabited by the most skilled?

> As an Advanced
>Class licensee who took the test before the FCC
>in the early 70s, I feel I would be downgrading were I to take the current
>extra class examination.

I'm not sure what you mean. Do you think the Advanced of those days was tougher than today's Extra? If so, why?
>
>Please hold all insults because they won't influence me in any way. I am
>however, ready to listen to thoughtfully prepared
>responses.
>
I hope I have not insulted you, Bob. The main point I am trying to convey is that a lot of what we are discussing was tossed around when the recent

restructuring NPRM was going on.

5025. Amateur Radio And Emergency Communications

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-29 04:38:11 UTC
From: k4yz@aol.com
Message-ID: <20010929003811.27644.00000884@mb-fm.aol.com>
Source record: 21169

From an FCC Enforcement Letter dated 30 August 2001

"On May 9, 1997, you entered a plea of no contest to violation of Michigan Statute MCL Section 750.507(b), which makes it a misdemeanor to "prevent, interfere, obstruct or impede a public safety radio communication". "

The letter goes on to cite the recipient's conviction of interfering with RACES communications, and his subsequent grant of a 2 year renewal pending his "good conduct" for that period.

Seems that contrary to the insistance of one UN-licensed antagonist in this NG, the FCC DOES view Amateur Radio as an emergency communications asset, and that OUR service rates thier efforts (read that "time and money") to protect our ability to render EMERGENCY communications.

Please note no mode was specified. It's not germane.

Just another rant blown out of the water by facts and the FCC.

HAW! That's a good one!

It is precisely that sort of attitude that helped get us "Incentive Licensing" in the first place. The FCC thought that many hams of the '50s and early '60s simply stopped learning after passing their General or Conditional licenses. (Whether that is what really happened is another story). FCC felt that hams needed an "incentive" to learn more. But since most hams back then were already Generals or Conditionals, and those licenses gave all privileges, there were only two ways to generate an "incentive" for hams already licensed. One way was to create new privileges that did not previously exist (say, increased power or a new band) and the other was to take away existing privileges. FCC thought the former was impractical, so they did the latter.

>recognition and/or additional privileges just because the person took
>the test on a manual gearbox instead of an auto.
>
PA was slightly different "back then". There are all sorts of limitations possible on a license, such as "must wear corrective lenses" or "daylight only". One of the limitations was "automatic transmission only", and folklore had it that if you took the test in an automatic there was a chance of being limited to only automatics.

But in fact a manual trans had advantages for the test. For one thing, most of us learned on them, and we tended to use the same car for the test. Also, most of the test was slow-speed manuevering, like the "serpentine" test. Folklore of the day had it that you were supposed to go through the serpentine at a certain speed and not use the brake. With a manual trans in first gear, you could slow down by letting up on the gas.

There was also the fact that many of us were attracted to the challenge. Being able to drive anything that had four wheels and a motor was a goal of most teenagers back then - and today.

>>The popularity of manual transmissions continues, even though almost all
>cars
>>are available with automatics.

>
>Agreed!
>
>And the popularity continues even though not a single
>driver is mandated by licensing requirements to ever learn
>how to use a manual gearbox.

For a passenger car license, that's probably true. CDLs are another issue. But two points are clear:

1) The wide availability of automatic transmissions in cars and light trucks, and the lack of a test requirement for manual transmissions have not caused manual transmissions to disappear from those vehicles.

2) A driver with a certain skill set who has not learned to use a manual transmission is not as "qualified" as one with the same skill set plus manual transmission skill. But the states do not see a need to mandate or document that qualification, except in special cases.

Dang! We NEVER had such a thing! The boiler would shut down first, and we would simply freeze.

One thing the nuns would do whenever we would complain of things like classroom temperatures in the 50s (or 90s) was to tell us to "offer it up for the poor souls in purgatory". The idea was that our suffering could somehow aid the departed. This became shortened to the catch phrase "offer it up".

>the story unrealistic in that I'd fear the nun a lot more than
>my mom.
>
I remember the same story! And we all had the same reaction as you. I can still see the picture of the nun cutting the apple...

We new that, in real life:

1) No kid would try to put an apple in his pants pocket
2) All objects must obey Fudd's Second Law of Opposition: "If it goes in, it must come out".(*) Apples don't get bigger after they are picked, so the apple would come out the same way it went in
3) No kide would let a nun near him with a knife
4) No nun would be kindly in a situation like that.

Fortunately, things are better today.

Sounds like excuses to me! Nope, Larry. Not interested. I, personally, don't think I'd find a conversation with you in any mode all that much more than a yawn. I'm referring to all the other CW skeds I've noticed getting set up, then not made for one reason or another.

Wow, "~25 W. power to an indoor dipole." I wouldn't think that would be a concern at all for CW with anyone, anywhere using a practical, efficient mode of operation. Gosh, I talk all 'round the world on my 25W Radio Shack 10M radio through a Wilson 1000 antenna. Maybe you should try voice.

Ain't doing transportation fun?? I'm off today but have a six-hour church run (a racket BTW) carting a Baptist Sunday School. On both ends is a run for a temp help outfit we affectionately call Rent-a-Wino. What you get for being Reliable Jones: 5:15 AM check-ins.

As I cannot run 20, and probably would not if I could, the odds of our meeting are about nil.

From what I have read and from the recollections of USAAF air crews I have met, that's about right. The idea was to "break the spirit of the German people". It did not have that effect.

Kurt Vonnegut's "Slaughterhouse Five" is one account of the raid. Vonnegut was a POW in Dresden at the time. Ironically, he and the POWs with him survived because they were given the least-desirable air raid shelters (they were deep underground).

Remember, too, the fire raids of Tokyo.

I am a little afraid that the Kosovo caper will give someone the idea that conflicts can be settled by the flyboys. The history of bombing has not been exactly favorable. Butcher Harris nearly leveled Hamburg in 1942 but later analysis showed that it actually increased production by giving people little choice but to work in the war plants -- the saloons and theaters were gone. He did what Hitler could never do -- put the German economy on a war footing. Similar effect from the famous 1000 plane raid on Cologne. The refineries at Polesti were finally put out of action by destroying the railway and Russian occupation.

By the time LeMay did it to Tokyo firebombing was ancient history. There is even a pretty good case to be made that the Russians rolling up the Japanese Army like a cheap carpet in Manchria was more a factor in Japanese surrender than the A-bomb.

The POWs were actually imprisoned in the refrigerated (long since inoperative) section of Slaughterhouse Five. Being sealed with cork walls

is what saved them. They had been captured at the Bulge.

Which, of course, brings up items like the Navy's private war in the Pacific in which the Marines lost more men in three engagements with a lot less effect than MacArthur lost going from Darwin to Manila . When they got the torpedos to work, the submarines were the biggest single item in defeating Japan. Read Walter Krueger's book: Krueger was the 6th Army commander and the real brains behind MacArthur. As was pointed out to President Roosevelt and Admiral Nimitz at Honolulu, "Good generals do not turn in long casualty lists". That meeting was the one where Mac's ADC arranged for him to make the grand entrance in a red convertible following the fire chief's car sirens wailing; the convertible, known to everyone on the pier, was borrowed from the biggest madam on the island.

The Italian campaign was a classic case of having an Army and nothing to do with it plus Joe Stalin bitching about doing all the work. The Allies took the opportunity to give command to the biggest incompetants they had and went off to plan Normandy. We moved north as fast as the Germans let us. When we had a chance to pull off surrounding the enemy, Mark Clark wanted to take Rome. Similar situation after the break-out from Normandy.

Lots of things are possible with 20/20 hindsight but when getting your picture on the cover of Life magazine was a factor in military decisions that killed a lot of people it tends to make one both cynical and a bit ill.

Your "solution" to the problem is the CBization of the ARS. And you already know that I am not a part of that solution, so indeed I'm your problem.
ANd you keep saying that CW is no more than a novelty. Evidently you dont' know anything about the history of radiotelegraphy as a main mode of information interchange.
You're the least qualified person around to be telling newecomers anything about it.

5049. Starbucks and the NYC disaster

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-29 17:59:19 UTC
From: JJ <radiobuff@mailcity.com>
Message-ID: <3BB5FD53.9D9660E9@mailcity.com>
Source record: 21193

This is on the www.snopes.com website, a site that debunks urban
legends, but this is reported as actually happening. The next time
you want a cup of coffee at Starbucks, you might think of this.

****
My family owns an ambulance service in Brooklyn NY. Midwood
Ambulance if
anyone knows it. Anyway, my uncles were at "Ground
Zero" during the attack to
help the victims. They donated their time to help
with this crisis as many New
Yorkers did. A great deal of people were in shock
from the devastation. As many of
you know, shock victims are supposed to drink a
lot of water. My uncle went to the
Starbucks down the street to get bottles of water
for the victims he was treating.
Can you believe they actually charged him for it!!
He paid the $130 for 3 cases of
bottled water out of his own pocket. Now, I would
think that in a crisis such as this,
vendors in the area would be more than happy to
lend a little help by donating water.
Well, not Starbucks! As if this country hasn't
given them enough money! Anyway,
the point of this story wasn't to glorify my
uncle's actions but to suggest a boycott on
Starbucks. Now, I love Frappaccinos as much as
anyone, but any company that
would try to make a profit off of a crisis like
this doesn't deserve the American
public's hard earned money. Please forward this
e-mail to any one you know and
encourage them to do the same.

Thank you!

No, that's what YOU said I said, What I said is I have no more ham radio tests to take. I also said it they had came out with a Super Duper Extra Class license, I would have gotten that long ago, too. You, on the other hand, had to wait for the dumbed down Extra.

I do believe that was my pont. So how does one go about "proving" that
date at this MUCH later time? The date appearing on the license has
always been the effectivee date. I know that the FCC cuts no slack on
dates. If one lets his CSCE go just a single day beyond the 365 day
limit it is void and he must retest that element. I was questioning how
one goes about proving to the FCC that they should allow *any* time
previous to the date on the license he is using as his proof. I have
never seen or heard of a case where they ever did allow it.

For our most

I never saw any indication the the FCC would ever allow any date prior
to that appearing on the license document.

> Attack on America.

What is the purpose of this? I saw nothing in the news from the moment this tragedy happened that mentioned Hams, with the exception of ARRL bulletins. Lots of news about all the other volunteers.

What I'm trying to say is that yes, we know that hams were not the only people to volunteer. Hams were only one part of many Americans who rose to the occasion.

The entire text of my reply to your original post, minus the quote was:

What a mean spirited post. Of course there are others who have volunteered. I'm very sorry that you feel the need to say such things.

from which *you* managed to extrapolate:

> I'm puzzled that you show "disgust" at such "odious"
> mention of volunteerism by anyone not a ham in a
> disaster situation. Now you go back and mumble the
> sacred mantras of "CW gets through when nothing
> else will" and "the cellphones all fail during a disaster."
> Will that make you happy?

This is pretty interesting. There are four items in quote here:

"disgust", "odius" and "CW gets through when nothing else will" and "the cellphones all fail during a disaster".

Just in case you didn't catch what I said in my post reply to your original post, I wrote:

What a mean spirited post. Of course there are others who have volunteered. I'm very sorry that you feel the need to say such things.

And then:

> Oh, and "RF Design" magazine in a trade publication.
> Search for it on the Internet. That will get you a web
> address where you can complain directly to them
> about posting such "mean spirited" news.

Just in case you didn't catch what I said in my post reply to your original post, I wrote:

What a mean spirited post. Of course there are others who have volunteered. I'm very sorry that you feel the need to say such things.

Note that I mentioned your post, not the excerpt from R.F. Design I think it is a wonderful thing that they did.

However, that you would choose to use such a news story that makes note of Americans helping other Americans through a crisis, and try to turn it into part of whatever crusade you have in this group made my jaw drop!

And if you feel compelled to manufacture quotes to advance whatever you are trying to argue with people, it is clear that there isn't much point in discussing the matter with you, as it looks you will make up whatever is needed to advance your cause. I don't really care that much about CW, except that it is a mode, and I needed to learn it to get my license. I've only used it a little, preferring the digital modes of hamdom. So your so called quotes of me are not even how I feel, much less anything I have ever written or said.

And just so everyone, including you knows, I don't even feel disgust with you. Mostly just sadness.

Just a thought:

We ask our military personnel to take the risk of dying for our country--under fire presumably. And we hold them high as heroes.

Some people are willing to die for their country without compromise to their belief that peaceful resistance (or none at all) may be an alternative? And we belittle them?

A terrorist's "job" is easy whether fought by might or not. A terrorist doesn't think of the consequences of actions--and, indeed, actually welcomes your battle. It gives him/her higher position in the "afterlife." A terrorist doesn't care if confronted with the wrong side of a barrel or a peace sign.

Any way in which we individually or collectively choose to fight terrorism is dandy in my book. When at death's door it is not between anyone but oneself and God (whomever your God may be).

>bulletins. Lots of news about all the other volunteers.

Mike, you have to understand His Ugliness. Any time Amateur Radio is employed in the manner in which Part 97 or the ARRL suggest it should, HE has to find some reason to make light of it or suggest taht "hams" are somehow over-glorifying what's going on.

In most cases, you won't find a whole lot of "glad-handing" in the press of Amateur Radio. This is, in most cases, due to the fact that we are more interested in DOING what's necessary to support the agencies we serve.

Lennie can't stand that. He is an ugly, mean and vile person. Period.

>What I'm trying to say is that yes, we know that hams were not the only
>people to volunteer. Hams were only one part of many Americans who rose
>to the occasion.

He knows that, Mike. No one in this or any other forum is suggesting anthing of the sort (that we were the only one's involved) But he has to MAKE people think otherwise.

He thinks the more often he repeats his lies and vileness that it becomes true.

He's wrong.

>from which *you* managed to extrapolate:
>

>This is pretty interesting. There are four items in quote here:
>
>disgust", "odius" and "CW gets through when nothing else will" and
>"the cellphones all fail during a disaster".

Yes, it is interesting how His Putziness manages to interject adjectives and statements that weren't used in the first place.

He really is a creep, Mike. An ugly, disgusting creep.

Perhaps this may make you understand why I refuse to allow his posts to go unchallenged, even aggressively so.

>And just so everyone, including you knows, I don't even feel disgust
>with you. Mostly just sadness.

I'm disgusted. With the bastards who did the deed and with Lennie the Liar for trying to elevate himself on thier coat tails. One is only slighly less disgusting than the other.

I was writing from memory. It was a few years ago. The
point was that they were burdensome, unnecessary requirements.
My recollection was that the mood in the country had
swung away from the "OSHA is here to protect you from
yourself" viewpoint.

--

>>Although this scaling back in licensing requirements
>>was universally recognized as a 'good thing' for the
>>ARS, there was an awful lot of grumbling from the

> the problems of frequency coordination.

Perhaps I should have said "some grumbling". The guys
I talked to did feel the FCC made them waste a lot of
their time making the applications.

--

>>I was left with the distinct impression that, had
>>there not been an overwhelming consensus against
>>the regulations, many of the repeater licensees
>>would have preferred to keep them in place so that
>>their (far fewer than now) machines would stand as
>>monuments to their hard work and perseverance.

> I'm sure that was true in some areas. Not around
> here (Philly) though.

Probably an overgeneralization on my part -- should
have said "some" rather than "many". And, I have to
confess, it was my reading somewhat between the lines
of what they actually said (tone of voice, posture,
etc.) that led to my particular take on their feelings.

--

>> .....Licenses are just a necessary
>>evil to reassure the Government that some kind of
>>order will be preserved on the airwaves. The sense
>>of self-worth that is sought ultimately must be
>>derived from one's own life experiences and self-
>>knowledge.

> Good point! I would state it a little differently,
> though. As I see it, the license is only one "data
> point". What one does after the license is earned is
> far more important.

My economic-fundamentalist-jihad view of any interaction
with government, especially obtaining licenses, is that
it is essentially wasteful and meaningless. It siphons
off resources that could be better used to expand the
economy and enrich us all. So I regard a license not
as something to be 'earned' but rather something to screw
the government out of. How I feel about pursuing my radio
activities is my own private business -- strictly inside my
own mind. 1/2 a :-)

5063. Advice for new hams on buying used HF rigs.

Newsgroup: rec.radio.amateur.policy
Date: 2001-09-29 23:32:02 UTC
From: public@e.mail
Message-ID: <3bb65941$0$11770$45beb828@newscene.com>
Source record: 21308
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

I often get asked by new hams what is a good used HF rig to start out with.
I always tell them a Kenwood TS440 or some other rig with alot of memory
channels because I've found restructured hams appreciate these rigs more.
For example, the Kenwood TS440 has 100 memory channels, so a new
restructured ham can store all 40 CB channels and still have 60 memories
left over.

I also recommend handie-talkies for VHF/UHF to restructured hams. This way
they don't need to be near a power source whenever they was to kerchunk all
the repeaters in the area.

I'm proud to be able to do my part in supporting the ARRL in their
continuing efforts to dumb down ham radio and turn it into CB.

Elmer

"One day ham license's will be the free surprise in Cracker Jack and
cereal boxes... if we work at it hard enough."

No, that's what you said: Here is the exact interchange:
I said: A ham ticket is not a license to rest on your rosey
red laurals and stop learning.
You said: "The hell it isn't."
I couldn't believe you meant that so I asked you again:
By your quoted response to my statement, you said a ham ticket
is a license to stop learning.
You responded:
"Yep. I meant it."
It's there for all to see on Google/dejanews.

Because Jim is not a female, the 'if' part of the statement is
obviously false. If the 'if' part of an if-then statement is
false, the entire statement is true no matter what the 'then'
part of the statement says. This is a very basic rule of logic
which you will find repeated in every textbook on logic. So you
are saying that every logic textbook is flawed. Your gross
ignorance is showing again.

I have more than the average knowledge of Texas license plates, having been a ham and a plate collector for most of my life. Texas Radio Operator is a single type of plate, 6 x 12 inches, which can be assigned to automobiles or trucks. Motorcycles can not be issued a radio plate. Options there are regular private plates, dealer, personalized, and exempt. As for multiple vehicles, the computer is set up to page between a max of three vehicles with the same call. As for me, I have two Camrys with my call. It can confuse a rookie who doesn't know to page the computer.

Time to re-read the restructuring order.... Did it say those who TOOK THE TEST before those dates or those who had a license issued before those dates...? Technically, those who took the test were examined on that element that was eliminated, even if their license was issued after the date. Did the FCC forget about this case (and screw those people over)?

The Commission had a member about that time who routinely objected to the agenda on the grounds that most of it shouldn't be before the Commission at all. Such things as call sign changes for broadcast stations, etc. There was also a Senator who was firmly pissed about the FCCs refusal to censor broadcast television. When the budget got cut, a lot of strange requirements went out the window.

Ever seen or driven a Fiat "Panda?" I rented one once while stationed in the UK, 850 cc and were notoriously slow, severely limited in top speed. They're all over, and at the time comprised much of the vehicle fleet of the London Metro Police Force, used as local patrol cars. They also had "Area Cars" which were primarily 2-liter Ford Sierras, used for quick response, since the Pandas couldn't go much over 60 MPH even with your foot stuck thru the floor!

>>how to use a manual gearbox.

I obtained my CDL by taking my road test on a 30' transit bus equipped with an automatic transmission. In fact, there isn't a stick shift in the entire fleet of the transit property where I am employed. The same is certainly not true for trucks, however, and I'm sure anyone going for a Class A CDL (mine's only a Class B with Passenger and Air Brake Endorsements) must demonstrate the ability to sling gears. Auto transmissions are available for "big rig" trucks now, but don't seem to be gaining much widespread popularity, yet. I have yet to actually see a truck that has one, except for single-axle straight rigs used for local deliveries.

>For a passenger car license, that's probably true. CDLs are another issue.

>transmission skill. But the states do not see a need to mandate or document
>that qualification, except in special cases.

We must keep in mind that driver's licensing and Amateur Radio licensing are not the same thing. Admittedly, a requirement to know how to use a manual transmission does not really make sense these days, considering the ubiquity of automatic transmissions. However, when licensing Amateur Radio operators, people who are expected, if not required, to be able to provide basic backup communications under severe and austere conditions, it makes sense to require them to have a functional skill level in the Morse/CW mode. When you're

trading the effort required to accrue this skill for full amateur HF privileges, it's a very small price to pay, indeed!

My personal favorite song is "Mac Arthur Park," as sung by
Richard Harris. I just love the instrumental part, I wish it would
go on for 20 minutes! Finally found it on CD about two years ago.
The lyrics are quite amusing, actually. I dubbed it on a cassette
along with "American Pie" by Don Mc Lean and "Your Wildest
Dreams" by the Moody Blues, with a bunch of Beatles tunes
filling out the rest of the tape. One of my best "driving" tapes!

Cecil:

In fairness, the decision to charge for the H2O was probably made
by a subordinate store worker who didn't have the authority to give
it away, and didn't realize that doing so would be a particularly good
idea under the circumstances! I don't think that Starbucks deserves
to be judged in a negative light under these circumstances.

Dick:

Yep, I do the 0500 check-in bit all the time; but because I'm a particularly
low-class animal on the Amalgamated Transit Union food chain called
a "List Driver," I also get to work 12 to 14 hour days most of the week along
with the early starts. At my company's quarterly Safety Meeting next
week, I intend to ask to have the virtues of fatigued, burned out Paratransit
operators explained to me. Obviously, the Union and the Company must
see some virtue there that a lot of us low-seniority drivers do not, since
they agreed to place us in this position! All the overtime makes for nice
fat paychecks, but all work and no play makes Larry a dull boy, and I'm
getting duller by the minute! (Stop it, Cecil!)

>As I cannot run 20, and probably would not if I could, the odds of our

They sure were! And no other service had to meet those requirements.

>My recollection was that the mood in the country had
>swung away from the "OSHA is here to protect you from
>yourself" viewpoint.

The role of government in people's lives goies through a fashion cycle, like many other things. When things are perceived to be going good, people want less government. When things are perceived to be going bad, they want more. And of course the government is often out-of-phase with people's wants.

>>>Although this scaling back in licensing requirements

>own mind. 1/2 a :-)

Well, I wouldn't go THAT far!

But you can see the "fashion cycle" in FCC regs. In the '50s they made the regs
simple, like having 3 effective classes of license (Novice, Tech, everybody
else). Then they made things all complicated and "incentivized" in the late
1960s and 1970s. Then the tide turned back towards simplicity. For example,
about 2 out of 3 US hams holds either a Techncian, General or Extra Class
license, and the proportion keeps rising.

writes:

>There is no such thing as peaceful resistance when dealing with
>the likes of bin Laden and his terrorists. Try peaceful resistance
>and you're dead.

Peaceful resistance is the first step. Here are some examples of steps already
being taken:

- Freeze assets of terrorist groups and those who support them
- Cut off all "trade and aid" to countries that host terrorists
- Increase internal security in ways that help stop terrorists
- Increase border security
- Gather information about the terrorists and their supporters

So far, the USA and its anti-terrorist allies haven't done a thing that isn't
peaceful resistance. That could change at any time, of course. The Taliban and
others who harbor terrorists can take the path of peace and simply comply with
President Bush's requests.

As I recall, March 21, 1987 was the day the test changed. my earlier post was unclear on that point.

Trouble is, unless a ham saved some proof of when the test was taken, he/she may be out of luck. Obviously if one's old license has an issue date on or before that date, the test was taken before the deadline. But coming up with proof of being tested before that date after 14+ years may be kinda tough for some hams.

Of course all it really saves a Tech Plus is having to take the 35 question General exam.

The fact that you've been around long enough to start being judgmental of other people's operating practices instead of worrying about your own? Think about it. Were you this judgmental back when you first got your license?

> The lowering of standards to increase
> the numbers in ham radio is unacceptable

Actually, the problem is a "in your face" society that has been convinced that it can do anything it wants (which includes ignoring the laws and society's customs). And there isn't a license exam in the world that can change those outside influences that are now affecting ham radio.

Yep, "Peace for today, optimism for tomorrow, forget yesterday". It's
sometimes known as the Neville Chamberlain syndrome.

Well, ya gotta admit that the post is sadly funny and has a ring of truth to it. We have a few of those CB/Ham "newbies" in our area, too. You know who they are. Buy a Rad Shack HT and tie up the local repeaters for hours on end until their ni-cads go dead. You know them...they have no idea what simplex means. They are really befuddled when they get a UHF HT. You hear them ask. "whats the numbers to set up for the repeaters?" Of course they mean, "what is the offset?". Like that is high math to them....
They further add to this merriment when they say, "I'm gonna call AES and order me one of them kickers that gives me 30 watts out."
There are, of course, the rabble who buy used HF rigs and "open" them so they can use them on 11 meters. 10-4, Good Buddy? I heard that I did.
Oh...and I will NOT touch on the newbie females who find out how to use the auto patch enabled systems. That is another story for another day.

Yep, and I also challenged you to show where any licensee was ever
required to do anything whatever after his license was issued. Of course
you can't do it then or now. You always want to stir stink and that
seems to be the one skill that you have honed over your lifetime to a
fine art. What a waste of intellect. How does it feel to face your
declining years with that as your legacy?

I had a repeater in service at that time and had to go through the
silly mathematical gymnastics, too. I was pleased when someone finally
woke up and cancelled it. And I wasn't at all sorry to restore my own
callsign to it.
I never heard of anyone who lamented the demise of all that nonsense.

I cross posted this thread because much of MY message honestly applied equally to CB radio operators and scanner users (or any other person with radio experience, at any level, that is willing to volunteer his or her time to help others). Now it's nice that you've donated cash (or blood), but not all of the world's problems can be solved by getting rid of a little pocket change. People to do the work are also needed. Now, if you don't want to do that, please feel free to ignore the "drivel."

Every one of those steps is merely a small preliminary move on the big
chessboard. You forgot the full war footing deployment of massive
amounts of manpower and hardware. News accounts have SF units active in
Afganistan the past couple dfays at least.

>

That wouldn't end it, I am certain. Someone's got to pay for Sept 11.
By all accounts there are many of them ready and willing to do so.

Well, you're a troll.

But it is interesting to wonder why the manufacturers put so many
memories into HF radios. None of the memories on my FT-847 contain
HF frequencies; only a few VHF repeaters and simplex frequencies.
I don't even know how many memories it has; probably 100. My old
IC-726 had 26 or something and that was about 24 more than I needed
then too.

I know that Jerry, but look at the cost. If all you need is a 10m rig for an IF radio you don't need all the other bands, or the high power output either. In fact most of the transverters require input power on the order of a few milliwatts. The problem with using the larger rigs is how to turn down the output power enough so as not to smoke the transverter input. Along those lines the Yaesu FT-817 has proved popular with the microwave group because of the low power output. At least that was the comments from the vendors at Dayton.

I don't use the memories on my FT-847, since it's so easy to simply enter the frequency on the keypad... I do use them on my IC-706, but only as quick access to different bands, rather than spinning the tuning knob from now till Tuesday to get from 146.82 to 7.120...

Gee..it takes no large amount of genius to program HF memories into your
FT-847. Trouble is who wants to? You can put 14.313 in memory, but all that
you will hear is a Ham version of CB. Same for 3.950. Why bother? Most Hams
are rather fluid and do not adhere to any one frequency. Of course there are
those few who "park" themselves in one area and who exclude others from
their conversations. They are easily ignored and for the most part they have
little to offer the hobby.

DKW was one of the founding companies of Auto Union along with Audi, now
Volkswagen. In the days of a 1 litre racing formula the 3 banger
two-stroker was king until two guys named Cosden and Duckworth formed
Cosworth Engineering and turned the British Ford Anglia into a real beast.
The Anglia was the world's most over-square engine (2.5 x 1.5) and was
reputed to sound like an infuriated sewing machine. Smaller versions were in
SAAB and DKW, the big one was in an Auto Union which looked like a 57 Tbird
that had gone thru a hot water car wash.

Horch was another AU company. They made the tandem (not dual) rear ends
that you see on Hogan's Heros on the General's staff car.

At various times, DKW stood for Das Kleine Wunder (the little Wonder), Die
Knaben Wunsch (a bicycle, the boy's wish) and Dampkraftwagen.

You have not lived until you own a Datsun Bluebird, a Toyota Toyopet Tiara
Mk II, or one of the first 600cc Hondas capable of 9 mph in first at 14,000
rpm.

British Ford Escorts were kind of cute. Haven't encountered a worse gearbox
since the pigeon-egg on a chromed coat hanger in the Renault Caravelle.

I am not this way because I don't have the time or patience but, a true peace activist (and there are other "names" for it) meets death with peace.

You see, a true peace activist believes that in its purest form when there are no more lives left for a person, group, etc., to cause injury or death to, then they (the peace activists) have won, and their ideals were never compromised.

There is no such thing as peaceful resistance--*for you*. There is such thing as peaceful resistance for however many people believe in it.

>

I see. I thought the word "but" was a qualifier for a problem there: "I'm game if you are -- but I'm presently limited to 20-meters and ~25 W. power to an indoor dipole. However, I work TX all the time with this setup, so it should be no problem." I suppose you did say you work with TX all the time; however the end of that sentence once again sounded like a doubt.

The point of "peace activism" would be that anyone could read it any way
they wished; the point would still be that peaceful measures (those that
have not required injury, death, or destruction to people) are the only ones
deployed thusfar. And, what if it actually worked?

>
> The Taliban and

> > others who harbor terrorists can take the path of peace and simply comply with

>

Absolutely.

>
> That wouldn't end it, I am certain. Someone's got to pay for Sept 11.
> By all accounts there are many of them ready and willing to do so.
>

I am sure that many of our fine military men and women are ready and willing to defend our country. I am also sure there are many who "didn't bargain" for this when they went in and may not be as willing as you think.

The people who did the evil deed and those who support have already paid for the Sep 11 atrocity. That would, at least, be the conviction of a peace activist.

If the story of Ghandi is in any way accurate, a nation's independence was won without a shot fired. While it was different times, different "warfare", etc., it is nevertheless amazing.

I bow out now of this conversation, lest it becomes yet another long drawn out affair of "us against them" because people are out there who do believe in peaceful measures and would not choose to see a military action that involves death.

I happen to reverently respect the actions taken thusfar and believe that if sustained for the longterm, they would work and continue to work. "They" lose their ability to have influence and, more importantly, their capability to kill; and "we" get to go on enjoying life as usual.

I must have my "sort" set wrong. I came across this first in a response to it from Dick.

At any rate, Jim, I agree and I know it will probably go on to quite a long, drawn out conflict where additional innocent people will die. But, I think the incredible restraint our government/military has shown to date is so darned incredible that I can't help but be damned proud of them. I'll be just as proud of them for battle, but not without the added remorse of additional lives being lost.

I am out of the conversation now. Philosophies of peace vs. war always seem to lead to nothing but an us and them controversy. Isn't that interesting?

Why recommend a radio that has 100% failure rate? It's not a matter of if the PLL will go bad, but when. Kenwood goofed on the potting compound and it will eventually take the radio out. This used to be common knowledge.

Gee, I wonder how long my TS-440 SAT has until it turns into a
pumpkin?? Had it now for about 10 years and so far so good! There goes that
100% rating huh. Oh well, maybe I got the 1 in a million so that won't screw
up the record will it? And as far as those restructured hams go, I believe
if we all look back a little in time we will see that even we started out
with a 4 channel (or 23 or maybe even a 40 channel depending on our age)
cb that stimulated our interest enough to further our radio experiences. "It
must be lonely at the top" looking down at all those peasants.
"Porky".. "Miss Piggy's Favorite Bacon Maker down here in the
Sand Pile"! 73 there "Good Buddy" and I'm back quiet. Hi hi.

What do you mean 'if it actually worked'? Worked to find bin
Laden? well it might in that respect, but just capturing or
killing bin Laden will not stop the terrorists. These radical
fanatics (Taliban) only want one thing and that is to rid the
world of all non Muslims and particularly Americans. You will
never stop these people with peaceful means, as much as we might
wish it could be so, to think that is just wishful thinking.

You'd better call the guys on Jackson Street in Austin on that one. I'd guess that a personalized plate can not be issued which duplicates an existing number, and since it has been issued to you in the form of a radio operator plate, then it could not be issued as a personalized. Only radio operator plates can be issued to multiple vehicles, not personalized. Radio operator is not an accepted type for motorcycles.

My IC736 has around 100 memories, I think. I can't remember for sure because
I don't use them for HF. Too easy to enter the freqs on the keypad.

On the 706MKIIG I had in the truck, that was another story. Used it on 70cm
all the time and had my favorite repeaters programmed in.

My new FT817 only has ONE memory channel programmed and it too is a UHF
repeater.

Ol' Elmer Fuddy-duddy must be his name because if he was a TRUE Elmer, he'd
be reassuring NEW or RESTRUCTURED(if you will) hams and teaching them proper
operating techniques and all of the fun aspects that Amateur Radio has to
offer.

I was wondering the same thing only based on the fact that the 440's keypad fails and is no longer available.AES told me it is the only rig they will not take on a trade.

We have a variation of that here...

The newbie who shows up as fresh meat to the local ham club
is bedazzled and all revved up in the belief that ham radio is an
institution, and that all hams adhere to a chivalrous code of ethics
and brotherhood. Then the big wheel club icons get them to
buy the most expensive radios they can afford and finally screw
around with them until they sell their radios at ten cents on the
dollar to this snickering bunch of club craphounds, or simply
resign themselves to shut-up and show up at the meetings and
pay their dues like the rest of the captives who show up regularly.

What these poor newbies never find out, is that it doesn't have
to be that way. The local club meeting may only account for
2% of the local ham population because the rest don't have the
inclination to play the games of The CLUB and worship their
kingdom.

These "others" are more often better rounded and may actually
have jobs and family, and may even spend 3 out of 4 weekends
on family outings, and very probably spend more time on radio
projects or operations on their own because they enjoy the real
ham radio hobby more than club politics and pecking orders and
in general have transcended the brainwashing and NEED for
congregating at the muddy water hole.

If you want to congregate (and there are good reasons to do so)
be aware of your surroundings and keep your wits as you enjoy
the company of (some) others. Don't be like the teenage girl who
steps off the bus in the big city for the first time, right into the
arms of her new PIMP Daddy!

```

Over the past week, The Hal Turner Radio Show web site was attacked every day, causing the site to crash several times a day. We're back up now and hope to remain that way.

The following BREAKING NEWS is available at:
http://www.HalTurnerShow.com

U.S. ISSUES "DECLARATION OF EMERGENCY" FOR. . . . .
MAD COW DISEASE
Whoa. Where did THIS come from? First the Trade Center and Pentagon Attacks,
next, unbelievable beefed-up security with National Guard activation nationwide, then
police checkpoints at major traffic points. Once all that "control" is in place, we get
a government decree about slaughtering the food supply?????

ISLAM IS A PEACEFUL RELIGION????
In Peshawar, a fundamentalist stronghold barely 30 miles from the Afghanistan border,
a crowd of at least 5,000 surged through the old city, roaring "Death to America".

TALIBAN'S AFGHANISTAN DESCENDS INTO CHAOS
Troops fleeing, civilians on the move en masse

48 HOURS?
British newspapers say US, Britain and . . . . .Russia will strike Bin Laden very soon

RUSSIAN TANKS TARGET TALIBAN: Russian tanks are poised tonight to roll into Afghanistan.
NEW JERSEY VANITY LICENSE PLATES CAUSE TROUBLE FOR
MR. ABDALA
His License Plates read "OSAMA"
Get a load of this. . .

MEXICAN STREET VENDORS RAKING-IN THE MONEY SELLING
"BIN LADEN IS MY HERE" T-SHIRTS!
Our "friendly" neighbor to the south shows its true colors. More proof we should
kick these filthy third-world savages out of our country and send them back to the cesspool called Mexico

It may be tough, but they should have kept the documentation as part of their
"station records." There may not be any current requirement to keep a contact
log (historically required), but there's more to station records than contact
logs and the current license.

>Of course all it really saves a Tech Plus is having to take the 35 question
>General exam.

... Which may be a convenience especially since the person must still pay the
test/processing fee. Many study for the extra class element and take a shot at
it along with their "guarenteed" upgrade.

One of the conveniences of having 100 memories is the ability to choose
a memory channel number that is a mnemonic for the frequency. Thus I
have used the following on my HF Transceiver
66, 77, 82, 88 corresponds to most listened to broadcast stations
66 = 660 Mets games, 77 = 770 Yankees, 82 = 820 NPR, 88 = 880 All news
station
5, 10, 15 are WWV at 5, 10 or 15 MHx
6 = 28,885 6 meter DX coordination
I have a few other stored but as you see most are not for use for
transmitting.

Some states - supposedly "yes."
Other states - no.

As an example of a "no" state, California forbids it because although the two combinations will appear differently in the DMV computer network, there is a requirement that stamped plates may not have the same printed combination of numbers and/or letters as any previously issued plate.

NSA gearing up for War on Terrorism. Former
FCC employees with a prior background in Military
SIGINT who attained NSA Certified Professional
status gained during a military career, may be eligible
for several newly created positions at NSA. Former
FCC experience alone does not qualify one for these
positions. NSA Certified Professional status is a
requirement. The ideal candidate will have a background
with both NSA and FCC. Those hired will have
moving expenses paid.

Mr. Davies:

Radical elements in Islam twisted the words of the Koran for their own ends.
The Jews have radical elements within their midst who do the same with the Talmud.
Christians used the Bible Scriptures to justify The Inqusition which gave the
world the Dark Ages.
The Japanese cut-and-pasted their beliefs in WW-II to make the Emperor
into a living god, giving the world things like the Battan Death March and the
slaughter of hundreds of thousands of Mongolians. in the late 30's
In Germany, Hitler created a whole new religion under National Socialism
and the guiding "principles" of Himmler's SS and the Anneherbe Colleges.
In America the principal of "Manifest Destiny" in the 1800's was used as
justification for the genocide of Native Americans.
In Puritian America in the late 1600's, people were burned alive at the
stake for such acts as having black cats, charting the movements of
the planets or stars in the night sky, or having (now known as) mental illness.
The Balkans region has a history of so many instances of psudo-religious
pogoms, that it would take an hour to list them all in typeset.

I'm sure I missed some other examples. But you get the idea I hope....

Suffice it to say, when people cut-and-paste the documents of a religious
belief (and I mean ANY belief at all) to make a people or race or
culture the representation all that is of "bad" in the world, you will see the human
person then commit acts of atrocities that knows no bounds whatsoever
as the same it now justified as doing an act of "good" or "righteousness".

Sept 11, 2001 at the WTC was nothing new - it was just the latest chapter
in human history's ongoing sorry track record of behavor. It's not the end
either. History teaches us that.

(I hope you understood the preceeding Mr. Davies)

A good point. As far as recent history, look no further than the
Protestants and Catholics in Ireland. Amazing what people will do in the
name of religion. Unfortunately you are also very correct about this simply
being the latest and not the last.

You're still alive?

>ISLAM IS A PEACEFUL RELIGION???

Yes, pretty much. Thier extremists call thier arguments "jihads"...we
called ours "The Crusades"...

>TALIBAN'S AFGHANISTAN DESCENDS INTO CHAOS

Afghanistan has pretty much been in chaos for 500 years. That's why thier
people are so dirt poor and easily manipulated by scumbags like Bin Laden and
the Taliban.

Dwight,

BRAVO!!!!! Give Mr. Stewart a ceegar!!!

You have hit the nail right on the head. That's the problem I was trying (and
failing) to describe. I would only change one thing - replace the word
"society" with "attitude" - but that is just a minor detail.

"The problem is an "in your face" society that has been convinced that it can
do anything it wants (which includes ignoring the laws and society's customs)."

THANK YOU!!

>And there isn't a license exam in the

Larry wrote:
> Radical elements in Islam twisted the words of the Koran for their own ends.

I think this may be a misconception of the liberal-Christian mindset.

Sura 9 of the Qur'an declares the antagonism of Islam to all other religions. All but Muslims are excluded from Mecca and the rites of pilgrimage. Idolaters are threatened with slaughter and slavery. War is declared against Jews and Christians until they are humbled and pay tribute. This aura is called "the crusade chapter", and in the early campaigns was often read on the field before battle.

In matters political, Islam is a system of despotism at home and aggression abroad. The Qur'an teaches that a religious war is a sacred duty whenever there is a chance of success against the "Infidel". It further teaches that while the damnation of all infidels will be hopeless and eternal, Muslims, who, through holding the true religion, have been guilty of heinous sins, will, after expiating their crimes, be delivered from hell to Paradise, where the joys and glories are fantastic and sensual -- where each of the faithful is assigned seventy-two wives of the resplendent and ravishing girls of Paradise solely for enjoyment. (No similar thing for female Muslims on arriving in Paradise, I'm afraid.)

At home, religion and the state are not separated in Islam. Hence Islamic
jurisprudence, civil and criminal, is mainly based on the Qur'an and on the
"Traditions". Thousands of judicial decisions are attributed to Mohammed and
incorporated in the various collections of Hadith. The rights of non-Muslim subjects are of the vaguest and most limited kind. Although murder, manslaughter, and suicide are explicitly forbidden, blood revenge is allowed. False evidence is allowed to hide a Muslim's crime and to save his reputation or life. Slave-mistresses and concubines are permitted in any number. In case of unfaithfulness, the wife's evidence, either in her own defense or against her husband, is not admitted, while that of the husband invariably is. The evidence of two women, if admitted, is sometimes allowed to be worth that of one man. The man is allowed to repudiate his wife on the slightest pretext,

but the woman is not permitted even to separate herself from her husband unless it be for ill-usage, want of proper maintenance, or neglect of conjugal duty; and even then she generally loses her dowry, when she does not if divorced by her husband, unless she has been guilty of immodesty or notorious disobedience. In matters of inheritance, generally speaking, males are entitled to twice as much as females.

So?

It is clear that one of LHA's "prime directives" is that what professionals do and use is THE criteria to be applied to what amateurs do. In other words, if the pros use something, it's good, if they don't, it's bad. What amateurs do is of no consequence to LHA.

> If
(N2EY)

>were really a
>professional engaged in radio design he would not be so
>depreciating.

What does it matter WHAT I do professionally, LHA?

You are using the classic "ad hominem" attack, LHA. You attack the person because you cannot attack the message.

>But then, few seem to know what

(N2EY)

>does other than spend hours on the Internet.

"Hours on the Internet"? Not me. You're projecting again.
>
>He hasn't stated his company's name.

I don't own a company.

>(those who feel good about what they do for a living are seldom hesitant about

I feel very good about what I do professionally. But it has no bearing on amateur radio policy. The only person here whose professional activities have any bearing on amateur radio policy is Phil Kane, K2ASP.
>
>He hasn't made any technical comments on radio subjects
>other than amateur radio history or an electronic T-R switch
>supposed to be "featured" in the "Electric Radio" fanzine.
>"Electric Radio" is for vacuum tube radio fans.

There are many mistakes in the above sentence, LHA. Stay with this message and learn something.

I have made many "technical comments" in this and other newsgroups. All there in google. Normally, antenna and transmision line discussions are held in rec.radio.amateur.antennas, for example.

Here in rrap, I have had several technical discussions. For example, there was one about the necessary bandwidth of OOK Morse vs. Baudot or ASCII FSK at the

same speed. Also discussions about the compatibility of spread spectrum with "narrowband" modes on the amateur HF bands.

I have NOT discussed an electronic T-R switch at all.

The homebrew station I used in 1995, and a related story, was described in an article published in Electric Radio in that year. I've had other articles published in amateur radio publications, too. The station described is only one of several that I have designed and built.

Electric Radio is a publication devoted to several subjects of interest to hams. Among them are amateur radio history, AM, military radio, vacuum tubes, restoration of old equipment, and related technical subjects. It is not a "fanzine".

How can you tell? And what difference does it make?

A Smith Chart is a graphical form of complex
> quantity presentation.

Yeah, we KNOW, LHA.

> Complex quantities are not part of high school curricula.
>
Can you guarantee that? Even if true, how does it prove anything?

Fact is, I learned about complex numbers when I was in high school. Also had advanced placement calculus and physics in high school.

I used to do RF design professionally, by the way. Now I do other types of design professionally.

>

> "Electronics" magazine just after WW2. Its usefulness as a
> tool became universal to all who worked at radio frequencies
> worldwide...and remains today, still widespread, a factual
> standard in the electronics industry..

And the guy who developed it was a ham. Had the call 1ANB. Knew Morse code,
too.

Phil Smith invented and developed many other things. For example, he derived
the optimum diameter ratio for coaxial feedlines. Said it was the simplest
patent ever granted - just the number 1.65.
>
> "Morse code" was conceived a century before, not for radio
> but for primitive electrical landline use.

Note the derogatory description "primitive".

> Landline manual
> telegraphy was beginning to be replaced by teleprinters a
> half century after its conception.

Yup. But it took another half-century plus to complete the replacement.

Replacement of graphical methods of problem solution by computer-aided
numerical methods began at least a half-century ago.

> There are no manual
> telegraphy landlines now.

None at all? Are you sure?
And, if true, why would it matter? Discussion here are about radio, not
landwire communications.

> Morse codings on radio now
> exist only in amateur radio and a handfull of third world
> countries.

Nope. Not true. Hint: Think "automatic ID"

> The FCC does not consider morse skill to be a
> meaningful one in determining a grant for an amateur radio
> license.

Nor do they consider Smith Chart knowledge to be very meaningful in granting an amateur radio license.

Yet a morse code test still needed for all but one class of FCC amateur radio license. That will probably change in the future.

N2EY

> first got your license?

No, I didn't need to be. Back when I first started it was a "given" that you
knew your stuff. You couldn't
pass the exams unless you comprehended the material. Yes, there
were LIDS then too, but that was purely an operating issue.

> But I don't agree that the "standards" have been lowered. There have
> been changes to the entrance exams, but that does not necessarily mean
> that "standards" are lowered - only changed.

Yes, they have changed for sure. With sufficient memorization a monkey can
qualify for
a license.

> But your "solution" is not a discussion and it doesn't offer a
> resolution (the FCC isn't going to buy it).

How can you be so certain the FCC won't buy it? Simplification? OK, then
let's get rid of
incentive licensing, that would really simplify things.

> > (snip) What have you done recently to
> > clear up the division??

> For one, I've tried to be a little more realistic about the problem
> (the division) and the solution (not increasing the division).

Discussing a perceived problem and it's possible solutions should hardly be
cause for division.
There is a lot of division in ham radio but not because someone makes note
of a problem.

That's what I thought when I first entered ham radio also (the all hams "knew their stuff"). However, as my own skills caught up, I came to realize that ham radio is made up of people with a great variety of skill levels (not all "knew their stuff" and some knew much more).

By the way, let me quickly comment on a misconception you seem to have - that the license exam is there to prove that hams know their stuff. As I've said many times before, the license exam is not a graduation exam designed to prove skill or knowledge - it is instead an entrance exam designed to test basic skills needed for the operating privileges at that license level. It is after you obtain the license that you gain more skill and knowledge beyond those basics through actual use and experimentation.

I'd like to meet that monkey. Seriously, how do YOU learn without memorization? According to what I've read, memorization is the

cornerstone to all human learning (language, motor skills, general knowledge, etc). Without it, we could not perform at the intelligence level we now perform at.

So, without memorization, you could not possibly do what you do. You could not operate your radio unless you first memorized what the buttons were for (or do you look at the manual each time). Likewise, you could not tune to the proper frequency without first memorizing what frequencies were available to you (or do you look at a wall chart each time). And, likewise, you could not operate properly without first memorizing the rules and accepted procedures (or are you a lid).

Funny that you would be so opposed to memorization, especially considering how much of what you do is directly dependent on it.

>filling out the rest of the tape. One of my best "driving" tapes!

There is an excellent PBS documentary on the Moody Blues. Starts and ends with excellent music videos of "Wildest Dreams" and "I Know You're Out There Somewhere". They are a favorite of mine from the very beginning, and ya gotta love any band that will parody themselves on "The Simpsons".

Most Beatles tunes are so good that they will endure for generations. A few days ago I heard "I Will" on the radio after not hearing it for a long time. I was struck by how both the perfection and the simplicity.

They were overplayed in their time, though.
>
No driving tape is complete without at least one Meat Loaf tune ("Paradise By The Dashboard Light" is recommended) some old Springsteen ("Jungleland"), and of course a little Bob Seger ("Night Moves" and "Long Twin Silver Line" are recommended, but Seger tunes all sound so much alike that it's not too critical).

Get the book.

I decided to go with "society" because that "attitude" seems to be society wide at this point (certainly not all are like that, but way too many are). Negative attitudes have become commonplace in this society and it is slowly pushing out civilized behavior between people. Add to that an attitude that one can do anything one wants (society's laws and customs don't apply to me) and it is really amazing that ham radio is in as good of shape as it is.

But, in spite of the fact that ham radio is doing fairly well, it has most certainly not avoided the problem entirely. That "in your face" attitude, combined with the "I can do anything I want" attitude, is slowly creeping into ham radio and will continue to do so. And the only way to stop it is to sharply reduce those attitudes in the society as a whole (not something that is going to happen anytime soon).

> who pass it will follow the rules.

I really do want to agree with you on this, Jim. But I just don't think a test can have that much of an effect. Look at today's congress, college students, military personnel, business people, and so forth. In spite of the relatively heavy requirements for each of these, there are still way too many with the attitudes described above (and that percentage seems to be growing). There has to be another way, but I'll be the first to admit that I don't have a clue what it is.

> Welcome back.

Thank you. I still have things that are eating up my time at the moment (constant trips out of town that will keep me off for days at a time), so I still cannot be as active as I once was in this newsgroup. But, in another month or so, hopefully I'll have a little more free time to devote to the discussions here.

Perhaps you haven't noticed that the FT-874 is a general coverage receiver, covering the shortwave broadcast bands as well as the ham bands. Those memories are handy for storing common shortwave broadcast frequencies, as well as commonly used ham frequencies.

I also have several of my previous employer's HF frequencies programmed into memories. And, since I'm a member of the USCGAUX, I have some memories set aside for the HF marine frequencies. I also have a dozen or so memories set aside for local HF and VHF civil defense frequencies, and for VHF marine frequencies.

All of that uses about half of the memories in my FT-847.

There you go! I built a couple of dead bug pip-squeaks before
cobbling up power supplies for TCS boatanchors. The joy of
discovery! (and reverse engineering)

When I was in High School, there was a kid who actually tore up
transistor radios and junk and built up a QRP transmitter/receiver
and mounted it all with a battery pack on his bicycle. We used to
poke fun at him a bit, try to give pointers and ideas on how to
improve and elaborate on it and he'd get pissed off. A couple of
us pulled him aside and told him we were proud of him for doing it,
and only wanted to help with the project.

That was the neat thing back then, everyone had different projects, but
we could all jump in the middle and participate vicariously.

These newbies only find the joy these days after they bring it all home,
plug it in and find out they need to come up with an antenna...

Jim, AC6TK

Yeah, that may be true, but for one, I never have more than $200.00 at
all.... If being forced to buy some overly expensive multiband-does
everything-sell your first born-radio is
all that I have to choose from, guess you won't ever hear from me on HF
anyways.....

The orignal intent of the post was, look at our VHF/UHF bands and the radios
we have to choose from..... 6 meters??? about one or two rigs that I am
aware of, 220?? about the same...

>Sura 9 of the Qur'an declares the antagonism of Islam to all
>other religions.

And you obviously haven't read some passages of the Bible that pretty much doom to Hell anyone who dares consider anything but Christianity.

Not very tolerant.

>All but Muslims are excluded from Mecca and the
>rites of pilgrimage.

And you'd want to see Muslims precticing at the Wailing Wall? It's thier religion and thier Holy City. So what business do you have there if you are not Muslim?

>Idolaters are threatened with slaughter and
>slavery.

Remember the events following Moses' descent from the Mountain?

>In matters political, Islam is a system of despotism at home and
>aggression abroad.

And the Crusades...?!?!

>...where each of the faithful is assigned seventy-two wives of the
>resplendent and ravishing girls of Paradise solely for
>enjoyment

And the problem with THAT is...?!?!

>At home, religion and the state are not separated in Islam. Hence
>Islamic
>jurisprudence, civil and criminal, is mainly based on the Qur'an
>and on the
>"Traditions".

The "separation of church and state" is (for the most part) an American thing.

Also, not all Islamic countries are the despotic and evil regimes that Iraq, Afghanistan and Iran are. They are, however, prime examples of why religion SHOULD be excluded from government.

>Although murder, manslaughter, and suicide are explicitly
>forbidden, blood revenge is allowed.

And the United States' present redeployment of five CBG's is what if not
"blood revenge"...?!?!

Don't get me wrong...I think we are of right to do it and I hope someone
overthere get's the message that they cannot allow scumbags like Bin Laden to
operate from thier borders without impunity. I DO, however, take issue with
your suggestion that it is somehow a purely Islamic event.

We Christians have been doing it for centuries. You can't point a finger
at them without seeing the reflection.

>Slave-mistresses and concubines are permitted in any number.

=)

>The
>man is allowed to repudiate his wife on the slightest pretext,
>but the woman is not permitted even to separate herself from her
>husband unless it be for ill-usage, want of proper maintenance,
>or neglect of conjugal duty;

Which is just about 180 degrees out from the realities of divorce in the
United States. A woman who leaves her husband in the US for anything on almost
any pretense is celebrated, while a man who leaves is assumed to be a dead-beat
or philandering. A woman who finds solace in the arms of another man is pitied
because the mean SOB she was married to couldn't keep her happy...The Husband
is "an adulterer..." What's up with that?

>.... and even then she generally loses
>her dowry, when she does not if divorced by her husband, unless
>she has been guilty of immodesty or notorious disobedience. In
>matters of inheritance, generally speaking, males are entitled to
>twice as much as females.

Have you seen the new designer Barbie doll?

It's call "Divorced Barbie"....Comes with all of her accessories and half
of Ken's....

That coin you are flipping, Michael, has two sides. Perhaps you need to
look at both of them.

Steve in Tennessee

Yep- the 'entry level' licenses were designed to do just that. NOT the
Extra class, but that's where it has been allowed to slide.

It is after you obtain the
> license that you gain more skill and knowledge beyond those basics
> through actual use and experimentation.
>

So, one needs to know next to nothing to get to the highest level of
ham radio license, and that fact means that the highest level ham
license is considered to be near nothing. Makes sense, doesn't it?

So you are stating inversely that hams "don't know their stuff"? We can
twist
this verbiage around all day, but when an Extra has not mastered skills that
a Novice or Technician has, then I find that to be problematic, not
judgemental.

I'd like to meet that monkey. Seriously, how do YOU learn without
> memorization? According to what I've read, memorization is the
> cornerstone to all human learning (language, motor skills, general
> knowledge, etc). Without it, we could not perform at the intelligence
> level we now perform at.

I learn by reading, listening, comprehending, practicing, making mistakes
and practicing some more.
That takes time. It is after this process is complete that I commit this to
memory, not before.
Information stored to memory before this process is complete is often
faulty.
Mere memorization is NOT learning. It is part of the process, but that is
all.
If you memorized morse code, how far do you think you would get with that?
dit-dah duh.....
What if you memorized a schematic of your rig without understanding what a
resistor
is, or Kirchoff's Law or worse yet Ohms law?? Yes, you could refer to a
chart for the laws
but you need to "understand" how to apply them.
So much for the memorization theory!

>

I explained this in the above paragraph. Please don't make assumptions about
me.
I'm not a LID. Perhaps unlike you, I do occasionally look at a wall chart.
My memory is not as good as it once was.

Incorrect. :-)

The address header quoted indicates the "lightbulb" post
was done at 2:52 AM PDT on Sunday, 30 September 2001.
At that date and time I was not even close to a computer
nor logged on to any ISP nor at home. :-)

>If not him,
>it's a lonely gay ham-hater trying to score points with His Limpiness to get
>some geriatric time under his belt.
>
> Another Anonymous Coward.

Heh heh heh. Robeson's obsession is reaching psychotic
levels.

Pity that this fundamentalist cannot accept a general item of
humor that was not "addressed" to anyone specifically.

Only those who think the world revolves around them and
their viewpoints would be so sensitive as to take such a
humorous item personally.

Here's the entirety of Stu Parker's posting -

"Q. How many hams does it take to screw in a lightbulb?

A. One. He simply holds the bulb to the socket, and the
rest of the world revolves around him."

Not "thinks," knows...

The colonel was totally ignorant of the terms used in the posting, didn't know what they were and thought they were gibberish. As a result he "replied" with gibberish.

The terms I used are quite familiar to all of us who have actually worked on RF in the electronics industry. They would not be familiar to those whose only "experience" comes from reading and memorizing all the sales ads in QST.

Except for some products that are relatively new (Duroid, the newer H-P network analyzer model numbers), the terms have been around for at least three decades.

The ignorant have three courses of action: Do nothing about such postings, ignore them; seek to learn more, asking questions and studying the general scope of activity; or sit around in anger and fury, pouncing on each and every posting of an individual to attempt belittling them, insulting them, or thinking up lies to post about another.

The colonel chose the latter.

The colonel is a licensed amateur extra and thus representative of the US amateur community.

My posting was on a separate thread, the content received in
an e-mail from R.F. Design magazine that same day.

It involved radios. It involved volunteerism. It involved news
that concerned the stricken areas.

> What I'm trying to say is that yes, we know that hams were not the only
>people to volunteer. Hams were only one part of many Americans who rose
>to the occasion.

Is that what you are really trying to say, mjc5? Or are you
so overly sensitive to the subject that you took it personally?

Nowhere in my post did I mention "mjc5." :-)

Why can't you handle news of what goes on outside
of amateur radio?

Had you stopped to consider the description of goods in that original posting? Can you comprehend that EIGHTY SIX TRUCKLOADS is a lot of radio equipment? Can you?

Can you comprehend that city governments have many bands in the EM spectrum that do not communicate directly ih allocated amateur bands? Can you comprehend that New York City already had radio communications equipment and that most of it was still functional and being used after the Attack?

Can you comprehend that the WORK TASK of New York City is now involved with the clearing away of a half million tons of rubble in a 16 acre site? That work task is immediate, is in progress, it adds a tremendous burden on the entire city.

There won't be any victims still alive in the rubble of what was the World Trade Center...but clearing away that tremendous amount of rubble is going to take at least another month. NYC needs to control and coordinate all those trucks and equipment, to make sure that the city can still function normally (as much as possible) while the clean-up continues. They can use the Motorola equipment for that work.

Ask yourself the question as to whether or not the clean-up tasks, the body part identifications, and coordination of all the work crews can be performed by radio amateurs doing "emergency communications" in coordination with the Salvation Army? Or the American Red Cross?

Get real. The amateur radio communications done on day 9-11 and afterwards was good and true but it did not serve the "emergency communications" needs of NYC. It did serve to help the Red Cross and the Salvation Army and thus was truly in the "health and welfare" communications category. But...it did not make any real dent in true emergency communications for the city of New York. NYC did its best with what they had in a situation that dwarfed the imaginations of everyone.

<let's cut to the chase to get to your tagline...>

> And just so everyone, including you knows, I don't even feel disgust
>with you. Mostly just sadness.
>
> - mike -

What "sadness," mjc5? Sadness that I didn't laud amateur radio to the skies for "emergency communications" during an evil, monstrous event? Did you want me to ignore the true emergency radio communications that went on just to wave some banners about ham radio and live in some fantasy world dreaming of heroic rescues of the past? Are you like some others in here who do that?

Get real. Real emergency/disaster organizations exist and function throughout the country. If you have a need to get involved, you have to accept integration into the existing groups and go with their direction. Amateur radio is not going to "save the day" by sitting on the sideline as a separate group thinking they "know it all" about communications.

Put things in perspective, not in pipe dreams or petty, little personally-offended nonsense.

> Had you stopped to consider the description of goods in that
> original posting? Can you comprehend that EIGHTY SIX
> TRUCKLOADS is a lot of radio equipment? Can you?

What fucking crock of shit Anderson. Don't you know the difference between a truck and a truckload?? Granted you are a load, but here's the quote

To date, Motorola has delivered at least 86 trucks with communications equipment to field teams and customers in the New York City area, Virginia and Maryland. In addition, seven planes carried Motorola equipment into the affected areas at the height of these disasters.

TRUCKS PECKERHEAD..NOT TRUCKLOADS...big difference You make it sound like they're packed with stuff and in reality (which you fail to live in) they are communications trucks with gear. What a fucking ass you are Lennie

Additionally, three major communications systems were delivered, including a 900 MHz trailer radio system and an 800 MHz trailer radio system in New York City, and an 800 MHz trailer system which is being used at the plane crash site in Pennsylvania. A fourth major system, an 800 MHz, 15-channel communications system, was delivered to New York to provide back-up communications for emergency services. Motorola workers produced the system, which typically takes about three weeks to assemble, in 30 hours for shipment to the emergency areas.

Approximately 9,500 of our portable radios, 16,000 batteries and 3,000 chargers have been delivered so far. Further, about 120 base stations, and nearly 5,000 pieces of miscellaneous accessories, such as cabling and antennae equipment, have been delivered. Motorola has also delivered 700 Iridium satellite telephones to emergency agencies in the New York City area. We also provided 1,000 cellular phones to a major insurance company for its policyholders in the affected areas.

Motorola has also donated 10,000 iDEN multi-function phones to various federal, state and local government agencies, plus about 88,000 batteries, chargers and other accessories. Nextel will provide the phone service.

> pass the exams unless you comprehended the material.

When did you start, Bob?

One thing to remember is that in the past a ham had to have a certain degree of technical know-how to even get on the air. Until about 25 or so years ago, almost all beginners started out on HF CW, with a station consisting of a receiver, a transmitter, an antenna, some sort of TR system, and a bunch of accessories. Just hooking it all up and getting it to radiate a signal took some doing, and things like ready-made coax cable assemblies were all but unknown. Many new hams started out as SWLs, so things like how to tune a receiver and make/put up an HF antenna were not foreign to them.

The situation today is totally different. So it's understandable that some of the learning that was required by the circumstances of different technologies no longer happens. Instead, other learning goes on.

> Yes, there were LIDS then too, but that was purely an operating issue.

I think the issue of bad operating practices is of major importance today, much more so than when I started out in the mid 1960s. Ham radio, on any band, frequency or mode, was suitable for all audiences.
>
> > But I don't agree that the "standards" have been lowered. There have
> > been changes to the entrance exams, but that does not necessarily mean
> > that "standards" are lowered - only changed.

I would say they have been lowered. Not only have the code tests been drastically reduced, but the writtens as well. Before April 15, 2000, getting an Extra required passing 5 separate written tests totalling 190 questions. Today it takes only 3 separate written tests totalling 120 questions - and the content of the Q&A pools is not substantially

different. That's a lowering of entry standards for the top license.
>
> Yes, they have changed for sure. With sufficient memorization a monkey can
> qualify for a license.

No offense, Bob, but I don't think a monkey could pass any of the
tests.
>
> > But your "solution" is not a discussion and it doesn't offer a
> > resolution (the FCC isn't going to buy it).
>
> How can you be so certain the FCC won't buy it?

Their policies, words and actions over the past decade or so. FCC's
focus today is more on simplification of the regs and increased
emphasis on enforcement. That's a GOOD thing.

Check out the FCC enforcement letters for an example. (ARRL website is
one source). It's a shame such things are needed, but Riley & Co.'s
work is welcome and long overdue.

> Simplification? OK, then let's get rid of
> incentive licensing, that would really simplify things.

The restructuring cut the number of "active" (open to new applicant)
license classes from 6 to 3, the number of code tests from 3 to 1 and
the number of written tests from 5 to 3. It's clear the remaining 5
wpm code test will only be retained until the treaty changes.

How, exactly, would you "get rid of incentive licensing"? What would
happen to holders of existing licenses? What would be required of new
licenses?

> > > (snip) What have you done recently to
> > > clear up the division??
>
> > For one, I've tried to be a little more realistic about the problem

>
> Discussing a perceived problem and it's possible solutions should hardly be
> cause for division.
> There is a lot of division in ham radio but not because someone makes note
> of a problem.

I agree 100% on both counts. Discussion is one way to fix the
problems.

Bob, for a look at how all of this developed over time, you might want
to check Google for a series of posts here in rrap on "50 Years of
Amateur Radio Licensing". Gives a quick but detailed look at how the
license structure of 1999 came to be, and the proposals to restructure
it.

Oddly enough, back before 1951 there were just three classes of ham license, and two of them were the same except for how the tests were given (by mail vs. FCC office). One code test for everyone, and two written tests. Simple. We're heading that way again.

Everyhting old is new again.

Steve probably has CSMA/CDs that won't play .mp3s. The following table
summarizes the specifications for
Ethernet architecture. However, retransmission takes time, and will be
ubable to intercept it. Clyde
has other factors to consider before making a decision. The point was
relatively simple, the employees
would arrive at work to find the telephone system not working. The clouds
are intended to convey the idea
that this is an ever-changing situation. 802.3 has been installed and
configured. This way, only a small amount
of data can be transmitted, making it relatively easy for Stu to error.
Many, if not all, plan to recover a network. Some kind of exchange could
easily infect all the computers is also on the rise.
This is often accompanied each time a new disk is inserted.

I started out as a CBer in the late 50s (KBI2294). For various reasons I did
not actually
get my first ham license until 1968, as a Conditional and upgraded to
Advanced in 1973.

I would reduce the number of licenses even further to VHF/UHF only and
those that had all privileges. Those with VHF/UHF licenses would have no
code requirement and a simpler technical exam. Those with full privileges
would
be required to pass a SEND and RECEIVE code test at whatever the
international
requirement were at the time. I would impose a written exam that demanded
comprehension
of the material rather than mere memorization.
As to how to integrate current licensees into this, that would be difficult.

I can only state that from my personal perspective I would not be against
just grandfathering say
all of those that hold General licenses and above.
I think this would go a long way toward eliminating the current division
that exists in ham radio.

In article <20011001000309.26366.00000224@nso-mj.aol.com>, n2ey@aol.com (The Master of the Smith Chart) writes:

>I know what I'm talking about, LHA.

...N2EY keeps saying that...and offers no conclusive proof. :-)

>Nope. You are mistaken, LHA.

Saying that in every post is still no qualifier, N2EY. :-)

>I first encountered the Smith Chart in the pages of QST, more than 30 years
>ago. First learned how to use it from an excellent explanation in the ARRL
>Antenna Book.

...and from that N2EY has become a "master of the Smith Chart?!?" :-)

>It is clear that one of LHA's "prime directives" is that what professionals do
>and use is THE criteria to be applied to what amateurs do. In other words, if
>the pros use something, it's good, if they don't, it's bad. What amateurs do
>is of no consequence to LHA.

Really?!? :-)

What is so wrong about applying professional techniques and experience to what is essentially a hobby activity?

>What does it matter WHAT I do professionally, LHA?

It creates some basis, some bona fides for N2EY's claims such as being a "master of the Smith Chart."

>You are using the classic "ad hominem" attack, LHA. You attack the person
>because you cannot attack the message.

I'm only challenging the claim of N2EY being a "master of the Smith Chart." :-)

>>He hasn't stated his company's name.
>
>I don't own a company.

Why not? With all those credentials plus radio ham experience it should be "easy." :-)

Why is N2EY not proud of the company he works for?

>I feel very good about what I do professionally. But it has no bearing on
>amateur radio policy. The only person here whose professional activities have
>any bearing on amateur radio policy is Phil Kane, K2ASP.

Is anyone "attacking" N2EY's "professional" activities?

How can anyone "attack" something that is a mystery,
an unstated, unverified claim? :-)

>>He hasn't made any technical comments on radio subjects
>>other than amateur radio history or an electronic T-R switch
>>supposed to be "featured" in the "Electric Radio" fanzine.
>>"Electric Radio" is for vacuum tube radio fans.
>
>There are many mistakes in the above sentence, LHA. Stay with this message
>and learn something.
>
>I have made many "technical comments" in this and other newsgroups. All there
>in google. Normally, antenna and transmision line discussions are held in
>rec.radio.amateur.antennas, for example.
>
>Here in rrap, I have had several technical discussions. For example, there
>was
>one about the necessary bandwidth of OOK Morse vs. Baudot or ASCII FSK at the
>same speed. Also discussions about the compatibility of spread spectrum with
>"narrowband" modes on the amateur HF bands.
>
>I have NOT discussed an electronic T-R switch at all.

No? :-) Go back a bit to a very early "discussion" in
which there is mention of an electronic transmit-receive
circuit in use in a home-built transmitter-receiver that
allows the user to hear the other station in between
transmissions. That was claimed to be an article in
"Electric Radio" magazine.

>The homebrew station I used in 1995, and a related story, was described in an
>article published in Electric Radio in that year. I've had other articles
>published in amateur radio publications, too. The station described is only
>one of several that I have designed and built.
>
>Electric Radio is a publication devoted to several subjects of interest to
>hams. Among them are amateur radio history, AM, military radio, vacuum tubes,
>restoration of old equipment, and related technical subjects. It is not a
>"fanzine".

Is "Electric Radio" available on the newsstands? At any
periodical vendor? Just a question...don't be so touchy. :-)

"Electric Radio" does have a website. A fanzine is a specific
magazine devoted to fans (enthusiasts) of the magazine's
central topics. There is nothing wrong about fanzines or their
existance. Hundreds, perhaps thousands of different fanzines

are published in this country, covering a variety of subjects.

I know a fanzine editor-publisher. Why do you insult him by
making "fanzine" a negative word?

>What's the matter, LHA? Can't you take a "mild tweak?" ;-)

Yes, but in context...and it should be worded as such rather
than being enclosed in a body of text that is definitely not
complementary. See what follows, verbatim...

>>>> PGMTT - what's that stand for? Professional Geezers Matching Tall Tales?
>>>;-)
>>
>> Professional Group on Microwave Theory and Techniques.
>
>Same thing ;-)

That isn't complementary to a professional organization, is it?

Why do you insult the Institute of Electrical and Electronic
Engineers' professional group involved in microwave work?

>Nonsense. All I've ever claimed is to know a little radio. That seems to
>bother the heck out of you.

No, but the above is inconsistent with claims in the same message,
such as "it was easy" (to design and build your own rigs). It would
only be "easy" if you knew a lot of radio, not just a "little."

>I used to do RF design professionally, by the way. Now I do other types of
>design professionally.

Where and when?

>All of what I wrote is true.

...because you claim it. :-)

>And the guy who developed it was a ham. Had the call 1ANB. Knew Morse code,
>too.

That's not mentioned in "Electronic Applications of the Smith
Chart," by Phillip H. Smith, McGraw-Hill Book Co., 1969. Is
that somehow a "credential" for the remarkable innovation that
Smith made? The 1969 book carries the description as
"Member of the Technical Staff, Bell Telephone Laboratories."

>Phil Smith invented and developed many other things. For example, he derived
>the optimum diameter ratio for coaxial feedlines. Said it was the simplest
>patent ever granted - just the number 1.65.

That's nice trivia but departing from the subject. The back
flyleaf (of the dustcover) on my book lists 20 patents granted
to Smith. Anyone can quote from flyleafs. It is the subject

between the covers that matters.

Speaking of the subject, what else does N2EY offer readers
as bona fides for his claim as "master of the Smith Chart?"

>> "Morse code" was conceived a century before, not for radio
>> but for primitive electrical landline use.
>
>Note the derogatory description "primitive".

There is NO way that one can describe a switch, a pair of
wires, an electromagnet, and a battery as "high technology"
by today's standards or the standards of technology of a
half century ago. :-)

Note the extreme sensitivity of morse enthusiasts getting
angry over the "technology" of morse code methods.

>> Landline manual
>> telegraphy was beginning to be replaced by teleprinters a
>> half century after its conception.
>
>Yup. But it took another half-century plus to complete the replacement.

It took less than a quarter century for the majority of the
manual telegraphy lines to be replaced...but replaced they
were.

>> There are no manual telegraphy landlines now.
>
>None at all? Are you sure?

Yes. Yes. :-)

>And, if true, why would it matter? Discussion here are about radio, not
>landwire communications.

Morse code was devised for manual telegraphy on land. It was
applied to early radio because the primitive radio technology of
the previous turn of the century could not accept other modes.

The Smith Chart was devised by Smith to aid his work on
landline transmission lines while at Bell Labs. Why didn't
N2EY make that a reason to discount Smith Chart use in
radio? :-).

>> Morse codings on radio now
>> exist only in amateur radio and a handfull of third world
>> countries.
>
>Nope. Not true. Hint: Think "automatic ID"

...and that is for communications?!? :-)

Note the extreme reach to highlight morse code as "needed."
:-)

>Nor do they consider Smith Chart knowledge to be very meaningful in granting
>an amateur radio license.

Not correct. The FCC approves the VEC question pool
but the VEC QPL included questions on the Smith Chart.
The VEC QPL is composed of licensed radio amateurs.

>Yet a morse code test still needed for all but one class of FCC amateur radio
>license. That will probably change in the future.

Incorrect again. Passing a morse code test is REQUIRED
by US amateur radio regulations for "all but one class of
license." No pass the morse test, no get HF privileges.
Absolute requirement, not a "need."

Does passing a morse code test make one a "master of
the Smith Chart?" :-)

50 years of fun for me. I memorized Morse code when I was in

the cub scouts. You seem to have a different definition of
"memorize" than I do. Here's mine direct from the dictionary:
"memorize - to commit to memory" i.e. anything committed to
memory is memorizing. I fail to comprehend how someone can
receive Morse code without committing anything to memory.

If you memorized morse code then you commited mere dashes and dots
to memory.
Had you practiced this sufficiently, which I am sure you have, then you
would
have commited to memory a relationship between dashes and dots to a sound,
which later
would relate to a letter of the alphabet. When practiced to an even greater
extent you commit to memory words
that are comprised of sounds. Memory without practical application is
useless other
than for pure reference. Memorization is the first step in learning, not the
only step.
As an example, I could attempt to memorize the Russian language. Perhaps I
could recall the words at will,
but that does not mean I could pronounce them, put them together in a
grammatically correct sequence or even
begin to understand their meaning.

Bob, my dictionary says that is "memorizing", pure and simple.
Committing sounds to memory *IS* memorizing. Committing anything
to memory is memorizing, according to the dictionary.

Yes, commiting sounds to memory *IS* memory, but you didn't get there by
memorizing dots
and dashes. There are Savants who can memorize entire books, recall phrases
at will but when
questioned as to what the book was about, they are clueless.

The question was for Texas though. He can have multiple copies of the same plate on different vehicles, not to exceed three. I still have a new spare set here. They sent an extra set by error for a vehicle long since sold.

California will issue amateur radio call plates for one and
only one vehicle of any type that the licensee is a registered
owner of, and a "Call plus numeral" personalized plate for additional
vehicles.

They will not issue an amateur call sign on a personalized special-
series plate even if the applicant is the licensee and is willing to
pay the extra charge but they will issue any other non-call-sign-appearing
alpha-numeric combo on request. Quentin Kopp, the then-chairman of
the state senate transportation committee, and I went round and
round with DMV on this three years ago - it's their antiquated hard
coded computer system that blocks it, allowing an amateur call sign
combo only on an amateur call regular-series plate and Quent's
committee could not spring the half-million bucks to upgrade that
module at that time.

Through the efforts of yours truly, DMV will not issue a
personalized any-series plate with a call-sign-appearing
alpha-numeric combo to someone who does not hold that call sign.
Unfortunately they would not apply the same blocking for non-FCC
(foreign) call signs.

Isn't that what the Blues Brothers called their nun - "The Penguin"?
Even as adults they had to sit in those tiny desks. I forget the name
of their church, but I think George Carlin went the Our Lady of
Perpetual Motion. :-)

Hehe. I end up using NT/98 on the desktop due to apps.,
but there's no question you've got to be halfway nuts to
use a Microsoft server (deliberately made non-compatible
and non-standard) when you can get NetBSD/Linux/FreeBSD
to do the same job with less overhead and at essentially
no cost.

Where I work, they've dropped NT print servers and gone to
Linux. Since the switch-over, the system has suddenly become
100% stable -- which it never was before.

P.S.: Guess what Microsoft uses to host their FTP site?

In the early days when VW started to sell in the US, the jolly boys at Renault sold three models in the US, the 2CV now called Charleston that must be seen to be believed, the Dauphine which was supposed to be the bug killer, and the Caravelle that was aimed at the Karmann Ghia. Might have been a few 4 CVs but they made your DKW stylish by comparison.

The Dauphine was equipped with a 3-speed floor shift because Americans wouldn't know how to drive a four-speed, right. Small engines and 3 speeds produced fiascos. The Caravelle had a rear engine, and a four-speed with linkage that would have to have shaped up a lot to be called 'vague' coupled to a shift rod that looked like a chromed coat hanger wire terminated in a pigeon egg. Driving one was an experience: wind out in first, clutch, row around in a sea of Jello trying to find second, slow down, try to grind into a non-synched first, blow off that idea, find second, lurch off.

The Escort I drove in England was fwd but the linkage was right out of a Caravelle. Steam into Bath from the west and you go down a hill that as close to straight down as rubber tires will hold. The guy I was with tells me that while stirring up the Jello to find a lower gear, I let out a noise resembling Goofy's ya-hooowie.

Riding the tour bus in Bath you get to go up the hills and listen to the driver downshift until you are not doing walking speed at 2500 rpm. Grandma I have used but this bus's grandmas stretched back to Nefertiti.

The Escort engine could not get by US pollution rules so was never imported. Allah be praised.

No, you don't "fail" to comprehend, you refuse. You know very well that memorization alone is not learning. Memorization is only one component part of learning and cannot on its own constitute learning. Youi can memorize any number of things without absorbing any knowledge whatever of the subject matter.
You could memorize the entire Morse code alphabet table without being able to recognize a single character by its sound, which is the way it is used.

And that is quite apart from learning. I am quite sure that your Cub
Scout experience of memorizing a code table on paper would do little
good at operating radiotelegraphy on the air.

I seriously doubt that, Dick. I've seen nothing that would suggest the Extra exam was designed with a different intent than the other license exams. And the material covered is certainly rather basic compared to what should be covered to demonstrate "extra" level knowledge and skill when it comes to radio.

> > It is after you obtain the license that you

> Makes sense, doesn't it?

That is stretching it a bit, Dick. However, if you want professional accreditation for your radio skills, there are other FCC exams for that purpose. The ham license exams were simply not designed to do that. The ham license exams are only designed to demonstrate the basic skills needed to enter the various levels of this hobby radio service.

However, that does not suggest for a moment that the Extra license means "next to nothing." That license does establish that the person probably knows more about radio than perhaps 98 percent of the

population. And that is certainly far more than nothing.

I'm stating exactly what I said, Bob. Not some perversion of that to fit your agenda.

> I learn by reading, listening, comprehending,
> practicing, making mistakes and practicing
> some more. That takes time. It is after this
> process is complete that I commit this to
> memory, not before.

Then you are truly a very unique individual - perhaps the only one on this planet that can do what you claim. Most would find it nearly impossible to so completely control the memory process - to only commit something to memory after a long series of steps, not during those steps.

> Mere memorization is NOT learning. It is part
> of the process, but that is all. If you
> memorized morse code, how far do you think
> you would get with that? dit-dah duh.....

So how did you learn Morse code without memorizing the groups of sound associated with the various letters of the alphabet? You had to commit those sounds to memory, or you could not possibly remember them the next time you heard them. That is memorization, my friend.

> What if you memorized a schematic of your
> rig without understanding what a resistor
> is, or Kirchoff's Law or worse yet Ohms
> law??

Why would I memorize a schematic if I didn't understand how it worked? That seems like a complete waste of time. By the way, the last time I checked, how each of these (a resister, Kirchoff's Law, and Ohms law) work are covered in the license exams.

> I explained this in the above paragraph.
> Please don't make assumptions about
> me. (snip)

I'm not making any assumption about you personally. I'm only making an assumption about our understanding of the human memory process. Of course, since you claim to not fit the norm when it comes to that,

then obviously what I've written doesn't apply to you. Of course, the FCC designs the license exams for most human beings, not unique individuals such as yourself.

Dick, perhaps you need to be a little more clear on what you're trying to say. According to my understanding, learning is impossible without memorization - it is impossible to do one without the other. In other words, the two are directly linked - you learn what you memorize and memorize what you learn.

> You could memorize the entire Morse
> code alphabet table without being
> able to recognize a single character
> by its sound, which is the way it
> is used.

But you could not possibly learn to use Morse code without memorizing the sounds associated with the letters of the alphabet. Again, memorization is a necessary and inescapable component of learning Morse code. And, once memorization of those sounds as they relate to the various letters is complete, you have learned Morse code. What else is required?

In April 2000, getting a Extra required four written exams, Jim. The Technician, General, Advanced, and Extra. And it was a total of 155 questions, not 190. But, again, a change in the entrance requirements does not mean the "standards" were lowered.

Today, you won't see anything to suggest other than the Extra is just another memory job to be accomplished, and among the majority of new Extras you sure won't find much in the way of technical talent.

And the material covered is certainly rather basic
> compared to what should be covered to demonstrate "extra" level
> knowledge and skill when it comes to radio.
>

It was not always so. That is the main objection to some of the changes made in recent years. And no, no ham radio license was ever intended to be a comprehensive test in electronic knowledge, no engineering level exam, just a test of the licesee's level of advancement in the art and practice of ham radio. Today, successful applicants may, or more commonly may not, be able to find their butt with both hands.

Surely you know better than that- Ever hear of rote memorization?
Things memorized just to be regurgitated with no other intent, and no
particular gain of knowledge intended? Some people have photographic
memories and can recall every detail of anything they read or see, but
they may or may not be interested enough to learn the details and learn
to understand it. Memorization is an integral component of learning but
it definitely is NOT equivalent to the total process, which is what
you're saying.

That's right - *a component*. Not the total process.

And, once memorization of those sounds as they
> relate to the various letters is complete, you have learned Morse
> code. What else is required?

No wonder you have so much trouble with it. You don't know the
difference.

Clue: Study, thought, repetition and PRACTICE. And not just for the
Morse code.

Only if you leave out the old Novice written.

> But, again, a change in the entrance requirements
> does not mean the "standards" were lowered.
>
True. But since the restructuring both reduced the number of questions
and the number of tests without any real change in the question pools
or the test methods, it sure looks like a lowering of test standards
to me.

Consider just the step from General to Extra. Used to require the 50
question Advanced test and the 40 question Extra test. (We're only
discussing written tests, of course). Now it takes just one 50
question test, drawn from a combined pool.

> It involved radios. It involved volunteerism. It involved news
> that concerned the stricken areas.

And you re-labeled it into a new thread intended to do nothing but incite
anger and denigrate almost 3/4 of a million Americans.

You are a scumbag. Period.

>Why can't you handle news of what goes on outside of amateur radio?

It wasn't about "what goes on outside of Amateur Radio. It was about your
sadistic attempt to once again elevate yourself.

As usual, it backfired, but not without pissing off a lot of GOOD people.

>Can you comprehend that New York
>City already had radio communications equipment and that
>most of it was still functional and being used after the Attack?

I notice you always refer to Amateur Radio in lower case, but you
capitalize "Attack". Freud gotya again, Your Scuminess.

>There won't be any victims still alive in the rubble of what was
>the World Trade Center...but clearing away that tremendous
>amount of rubble is going to take at least another month. NYC
>needs to control and coordinate all those trucks and equipment,
>to make sure that the city can still function normally (as much
>as possible) while the clean-up continues. They can use the
>Motorola equipment for that work.

All of it absolutely correct. However it's not germane to the services
that were provided by ARES and RACES in the immediate aftermath of the attack.

Amateur Radio, once again, did exactly what it is expected to do...provide
immediate and interim communications facilities to the public in times of
disaster until the communications infrastructure is restored

This they did in grand style.

>Ask yourself the question as to whether or not the clean-up
>tasks, the body part identifications, and coordination of all the
>work crews can be performed by radio amateurs doing
>"emergency communications" in coordination with the

>Salvation Army? Or the American Red Cross?

Sure they can, Your Gayness. Prove to me (and the rest of the world) that they couldn't, if need be.....

>Get real. The amateur radio communications done on day
>9-11 and afterwards was good and true but it did not serve the
>"emergency communications" needs of NYC.

Another lie by someone who shouold know better...but doesn't.

>It did serve to
>help the Red Cross and the Salvation Army and thus was
>truly in the "health and welfare" communications category.

Among other things, yes. But it DID serve the emergency role, no matter how many times YOU say it didn't.

>What "sadness," mjc5? Sadness that I didn't laud amateur radio
>to the skies for "emergency communications" during an evil,
>monstrous event?

Only a sadistic, self-centered, callous fool like you would have thought that comment was about you, Anderscum.

What a putz.

>Amateur radio is not going
>to "save the day" by sitting on the sideline as a separate group
>thinking they "know it all" about communications.

And once again Lennie Anderscum proves that he has absolutely NO idea of what he's ranting about.

Amateur Radio does NOT "sit on the sideline as a seperate group".

Only YOU think that, Mr. Foolhearty. IF (and that's a BIG "if") you were an active, participating and CONTRIBUTING member of the Amateur community, you'd know better.

But youa re not...so you don't...

>Put things in perspective, not in pipe dreams or petty, little
>personally-offended nonsense.

Words you should live by, Your Emptiness. Words YOU should live by.

5229. DX Cluster via Internet

Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,aus.radio.scanner,rec.radio.amateur.policy

Greetings,

The recent widespread DX cluster abuse has been brought about by a like minded individual making us, at LPWS HQ, aware of Internet to DX cluster access.

There are several programs, but we have favoured DX-Telnet, copies of which are available for free download from our club web site at
http://www.laughingpoliceman.com
Go to either the DX cluster listings or the free downloads pages.

Please note that to change your victims call sign you need to go to Configuration/Personal Info as the program starts up with the last call used.

Have fun, just use ann/full before your words of wisdom etc. Bulletins can be sent as well as personal messages, for instructions type ? when connected.

G8ASO

Touche'. You certainly found a flaw in my logic.
The key is a long series of steps for which you are absolutely correct.
What I should have said is that " After this process is complete I will gain
understanding and comprehension"
I'm wrong, you're right.

I believe you're describing rote memorization more than actual learning.
I am not an educator or a scientist so I cannot argue from that standpoint.
While I certainly would have to commit sounds and dit-dahs to memory
at some point, they are useless to me until I am able to memorize them in
some applicable form.

Why would anyone memorize a test if they didn't understand how it worked?
I think that is just as much a waste of time.

I'm not making any assumption about you personally. I'm only making
> an assumption about our understanding of the human memory process. Of

I never claimed anything like that, it's just your play on my words.
You should give me an opportunity to admit I'm wrong before making
patronizing comments.

I believe you've reached the proper conclusion, Jim. Cecil sets up scenarios in which he plays definition games in order to be the "winner". He has on several occasions admitted that what he posts cannot be taken seriously. He is simply a guy who chooses to spend his large amount of idle time by wasting the free time of others.

It was pretty successful at inciting people, Steve. I suspect that someone is pretty proud of themselves. Bummer!

I'm happy to be of help when I can. the ARS isn't the focal point of my life, it's just a hobby where i can have fun and be of service to my fellow citizens when needed - civil emergencies or just plain old helping at public service functions, of which i do as many a year as our club does. When i'm done helping, i bet i feel a lot better than if i spent my time trying to belittle hams or other people.

ARS is good, volunteering is good!

> objection to some of the changes made in
> recent years.

Perhaps you can fill me in on exactly when that was, because I just don't see a fundamental change in the material covered today as opposed to the material covered in the past. In fact, I see some material covered today that was not covered in the not so distant past (RF exposure limits, for example).

> (snip) no ham radio license was ever
> intended to be a comprehensive test in
> electronic knowledge, no engineering
> level exam, just a test of the licesee's
> level of advancement in the art and
> practice of ham radio. (snip)

And there is the dispute. You see the license as evidence of a person's "advancement in the art and practice of ham radio," while I see it as evidence of a person's understanding of the basic knowledge needed for the various operating levels within ham radio. I have no official source to back up my contention. Do you?

Lacking that official word, we can only go off the evidence in front of us. And I think the absence of any test of the person's actual ability to operate a radio is sufficient proof that the exams are not designed to be evidence of "advancement in the art and practice of ham radio." How can it be evidence of "advancement in the art and practice" when it tests neither of those beyond the very basic fundamentals? And I have seen nothing that would suggest the license exams of the past were any more comprehensive. Those exams have always tested only the basic skills needed for the various operating levels.

I thought we were talking about the regular learning process used by normal people. You seem to be suggesting that recent Extras simply rote memorized the several hundred questions necessary to pass each exam on their way to getting that license, which does not at all seem likely (that would be a pretty amazing feat). And if they didn't rote memorize the questions, then they had to have learned something about the material while studying those questions to have passed the exams. By the way, I also don't think many of those Extras have photographic memories either.

> Clue: Study, thought, repetition
> and PRACTICE.

That's right - all of those can be used for learning. But that does not mean that a person has to do each of those before they can learn something. For example, a person can learn about history without practice. Likewise, people learn things every day without study (look at how much kids pick up just by watching television).

The only "Lennie" that exists is in this poor soul's mind, a name
that represents all who are "against them."

Paranoia is demonstrated by statements of "conspiracy" against
their thoughts-actions-deeds, grouping all those who oppose him
under a convenient name-label, usually derogatory. Feelings of
paranoia and associated perceived persecution feelings cannot be
satisfied with any sort of argument against that mindset, serious
or humorous or in-between. QED.

I see it as evidence that a person has possibly barely met the bare
minimum requirements for the associated privileges. Knowing that
someone passed an exam doesn't tell you if he/she is brilliant
or dumb as a stump.

Perhaps no fun, no entertainment, but there is no honor in anyone lacking
grace. I think that honor
among men is important. When I accepted a commission as an officer in
service to our country
I made sure I understood the meaning of "an officer and a gentleman".
To capitalize upon another's mistake is truly without honor.
It is not below me to admit a mistake or to apologize for a wrong doing.

I presumed you were asking a question. (The question mark at the end of your sentence was a big clue.) That's why I answered with "I don't consider the fact that faster-than-light particles routinely travel through media which is denser than vacuum to be problematic."

Do you not understand that this isn't a relativity problem? Light travels at the speed of light no matter how fast the observer (or the reference frame) travels, and light does not travel at the same speed in a dense media as it does in a vacuum. At the instant of the Big Bang, what was the index of refraction of space? If it was greater than one, it is expected that particles would indeed travel faster than light through the media. The problem becomes even more complex when one considers that space itself was expanding at a relativistic velocity.

String theory makes no less bizarre predictions about the beginning of the Universe. Fact is, they have only just begun looking at some of it's predictions.

Texas has issued a number of special purpose plates, normally with 5 digits. One of the newest ones is quite colorful (I regret I don't remember the type/purpose) but uses the series WB1BB and up. Obviously they weren't really thinking things out.

> Theory of Relativity?"

The article in "Science News" states that the early faster-
than-light inflation rate gives the Theory of Relativity
a problem. It's not my claim.

I sure did. Please note the context in which the question was asked. I said that faster than light is not necessary a problem for Relativity, and I gave an example. To which you responded snidely. My example was perfectly valid.

Tht's right, and that is exactly the point. No learning, knowledge nor expertise needed. Just download the pools and have a go.

If you want respect, you'll not get it from simply
> possessing a license. Respect must be *earned*.

You already know where you can stuff your "respect". We already know your position on all this. Back in the days when the Extra class ticket stood for something you wre too busy chasing that "one his $hit" to be concerned with much else.

Can I do a change of address online? If not, could someone post a link to the exact web page for this form and let me know what fields need to be filled out. I was given a packet of forms by someone for an address change and this included all types of land and mobile and marine communication, but nothing that specifically mentioned Amateur Radio address change.
Thanks 73

Exterminated, yes, but not compromised.
>
>There is no such thing as peaceful resistance--*for you*. There is such
>thing as peaceful resistance for however many people believe in it.
>
I believe in it up to a point. Let's look at a classic case - Ghandi.

Ghandi wanted an independent India. He wanted the British to turn over the government of India to the Indian people. He didn't hate the British at all, he just didn't want them in charge of his homeland. He was actually very "selfish" in that he wanted HIS vision of India's future to become reality.

He organized all sorts of nonviolent resistance acts against the Brits. They eventually realized that they had two options:

1) Leave India to the Indian people
2) Create a totalitarian state that would require large numbers of non-Indian people, harsh laws and harsher enforcement to maintain British rule.

The Brits were simply too decent and too depleted by WW2 to do 2), so they did 1). Ghandi counted on the fact that the Brits were too good at heart to sanction the drastic measures needed for them to continue to rule India. He knew that the Brits didn't hate the Indian people, they just didn't understand them. Ghandi's peaceful resistance won out because he knew how the British saw themselves.

The situation with terrorists is totally different. Their response to peaceful resistance is to simply kill the resisters. Heck, they do public executions in a soccer stadium for crimes like adultery. See

http://www.salon.com

for some examples.

Besides - how does one peacefully resist the kind of terrorism we have already seen?

>isn't
>> peaceful resistance. That could change at any time, of course.
>
> Ah, that wouldn't be the reading of a former military guy.

I'm not sure what you mean, Dick. What I'm trying to say is that the USA and
its allies are giving the terrorists and those who support them good

opportunities to avoid more violence. If war does come, it will be because the terrorists brought it on themselves.
>
> The Taliban and
>> others who harbor terrorists can take the path of peace and simply comply
>with
>> President Bush's requests.
>
> That wouldn't end it, I am certain.

Sure it will. As I recall, all President Bush requires is three things:

1) All terrorists to be in custody so they can't do more terrorism.
2) All organizations, training facilities and safe havens for terrorists to be dismantled and shut down.
3) Those responsible for the attacks on the USA brought to justice.

Simple. By all accounts, the organizations responsible are not very large - probably less than the number of innocent people killed already.

>Someone's got to pay for Sept 11.

There must be a way to seize the assets of the terror organizations and use them for cleanup, compensation and rebuilding.

>By all accounts there are many of them ready and willing to do so.
>
That's up to them, not us.

Yep. You should read what you write, sometime.

>What is so wrong about applying professional techniques and
>experience to what is essentially a hobby activity?

That's not the subject under discussion. And amateur radio is more than a "hobby activity".

You apply the practices of "professionals" as the SOLE criteria of judging what amateurs do. What amateurs do has no bearing on the issue, in your judgement. That just doesn't make sense.
>
>>What does it matter WHAT I do professionally, LHA?
>
>It creates some basis, some bona fides for N2EY's claims
>such as being a "master of the Smith Chart."

I never made such a claim. Produce the post where I claim to be "master of the Smith Chart"

>>"narrowband" modes on the amateur HF bands.
>>
>>I have NOT discussed an electronic T-R switch at all.
>
>No? :-)

Nope. I DID describe the definition of QSK. And I did mention a homebrew station I built more than 25 years ago that had an electronic TR switch. But that station is long gone, and it never appeared in any magazine.

You stated:

(N2EY)

"hasn't made any technical comments on radio subjects other than amateur radio history or an electronic T-R switch supposed to be "featured" in the "Electric Radio" fanzine."

You are wrong on at least two counts in that sentence.

1) I have made technical comments on subjects other than amateur radio history and an electronic TR switch
2) My 1995 station was in the magazine described - and it does not have an electronic TR switch.

>Go back a bit to a very early "discussion" in
>which there is mention of an electronic transmit-receive
>circuit in use in a home-built transmitter-receiver that
>allows the user to hear the other station in between
>transmissions.

Produce the post, then.

>That was claimed to be an article in "Electric Radio" magazine.

Not by me.

Your claim is that I have made no other technical comments. That's simply not true.

>>The homebrew station I used in 1995, and a related story, was described in
>an
>>article published in Electric Radio in that year. I've had other articles

Can't they take a "mild tweak"? Didn't you see the ;-)?
>
>Why do you insult the Institute of Electrical and Electronic
>Engineers' professional group involved in microwave work?

No insult. Just a "mild tweak". Why are you so officious and humorless on the subject? ;-)

Why is it OK for you to make fun of other people's names and professions, but a "mild tweak" by someone else is perceived as an insult? ;-)

Looks like a classic case of the double standard. One standard for LHA, another for everybody else. Don't do as LHA does, just do as he says.
>

It was. I did it, I should know.

>It would
>only be "easy" if you knew a lot of radio, not just a "little."

Saying I know "a lot of radio" would be bragging.

Seems like LHA wants to "mystify" radio design and construction by fostering the idea that a person needs to know "a lot of radio" to build their own equipment.

But I think what REALLY bugs LHA about me is that I not only design, restore, repair, build, align and OPERATE ham gear, but that I've been doing so for a very long time. My very first transmitter was a homemade one, which I built and operated at the age of 13.

In LHA's reply comments to the FCC, he recommended that there be a MINIMUM AGE LIMIT for ALL classes of amateur radio license. He expressed shock and outrage that young children were being licensed, even though there have been young hams for many years, and NO recorded problems due to the youth of the licensees. The MINIMUM AGE LIMIT LHA recommended was 14 years old. Yet he did not give a single example of a case where a young ham caused a problem that was relkated to the age of the licensee. Fortunately, the FCC completely ignored his recommendation.

>
>Not correct. The FCC approves the VEC question pool
>but the VEC QPL included questions on the Smith Chart.

A few questions out of thousands. And a prospective ham could get all of the Smith Chart questions wrong and still pass the test easily. Most ham exams probably don't include any Smith Chart questions at all.

That means they don't think it's very meaningful.

>Yet it is true. There is obviously no "proof" that would satisfy LHA.

Facts are irrelevant to him and his own misconduct ignored. No wonder he couldn't keep a job.

>Yep. You should read what you write, sometime.

One does wonder. How can someone with his alleged education spew the lies, misinformation and other antagonist BS he does in the face of reams of facts to the contrary?

Just proves to me that Masochism DOES exist, I guess.

>>What is so wrong about applying professional techniques and
>>experience to what is essentially a hobby activity?
>
>That's not the subject under discussion. And amateur radio is more than a
>"hobby activity".

Yes, it is. If he was a particpating member of it, he might know that, but like the rogue spacecraft "V'ger" In the original Star Trek movie, he self-destroys his ability to receive the facts.

>>It creates some basis, some bona fides for N2EY's claims
>>such as being a "master of the Smith Chart."
>
>I never made such a claim. Produce the post where I claim to be "master of
>the
>Smith Chart"

Lennie loves to put things in quotation marks as if the other party said it, yet was never uttered. To me, that is a lie. Where's Cecil's arguments on attributes now...?!?!?

>>I'm only challenging the claim of N2EY being a "master of
>>the Smith Chart." :-)
>
>Then produce the post where I wrote that I was "master of the Smith Chart".
>Since you used quotes, you are referring to an exact phrase.

And you expect this Putz to answer, Jim...!?!?! Hope you aren't holding your breath on this one.....

>Your claim is that I have made no other technical comments. That's simply not
>true.

The truth is not one of Leonard H. Anderscum's strengths.

>Why is it OK for you to make fun of other people's names and professions, but
>a
>"mild tweak" by someone else is perceived as an insult?

Quoted your comment, Jim, but deleted the "smiley"....Because I AM
insulting him...He makes it so easy to do.....

>Looks like a classic case of the double standard. One standard for LHA,
>another
>for everybody else. Don't do as LHA does, just do as he says.

Hmmmm....who else in this forum has been saying exactly that...?!?!
(Jeopardy 60 second jingle playing........)

>In LHA's reply comments to the FCC, he recommended that there be a MINIMUM
>AGE
>LIMIT for ALL classes of amateur radio license. He expressed shock and
>outrage
>that young children were being licensed, even though there have been young
>hams
>for many years, and NO recorded problems due to the youth of the licensees.

As a matter of fact, the recent spate of serious offenders (Flippo,
Burton) are in Lennie's generation...maybe an UPPER age limit...?!?!

Yeah..THAT'S the ticket! Then the Licenseless One will be off the hook
for getting that "Extra Lite out of the box" he said he would but has cowered
out of.....

>Where do I say Morse code is "needed" in that post? C'mon, produce some
>actual
>posts instead of misquoting.

You are being generous, Jim...That's why you are a far more gracious
gentleman than I....The scumbag is outright lying. No "PC" here....

Lighten up, Bob. Again, you're taking all this way too seriously.
All of us make mistakes and most of us apologize for them. Didn't you
see where I had to apologize to Jim for a mistake I made last night.
It is no big deal and, other than in jest (did you really eat crow),
nobody beyond a lowlife is ever going to hold it against you. However,
spouting crap about "honor," and "capitalizing upon another's
mistake," over a friendly newsgroup discussion, is certain to reduce
any respect I may have for you. And if a simple jest is enough for you
to declare a person as one "without honor, than I truly believe you
have no concept of what honor really is.

And the same applies to exams other than those for ham radio.
Watching some of the kids at the local college is evidence of that. I
see some of the kids pass exams when I'm absolutely certain they
haven't got a clue about what they're being tested on.

Now wait a minute, Cecil. That is beginning to sound too much like me. My memory is slowly melting, melting, mmmmeeeellllttttiiinnnnggg. At this rate, I'm fairly certain I won't remember my own name in a couple of years (that's why I had to put my name below in the signature block, so I can keep reminding myself who I am). And I'm not that old, so I can't blame it on age yet.

Each month, on the last Sunday, the old prospector, Lennie H Anderson would ride his old mule, CW, into town to pick up supplies. Since both the mule and Lennie were really old, they took their time and this caused a great deal of traffic to develop as they tottered down Main St together. Old Lennie would tie up his mule and go off to buy his monthly supplies, then get on his old mule and totter off back into the hills.

This went on for months. THEN, one Sunday, Old Lennie came out of the store to find that his mule was gone. Well, Old Lennie put up such a yell, "my mule", he ranted, "It be gone. Someone stoled my mule". Old Lennie went and reported it to the police. Lacking any pictures, Old Lennie proceeded to give the police a description of an ordinary old mule. The police asked if the mule had any special features that may identify it as Old Lennie's mule.

"Well", said Old Lennie, "CW has a big penis" "A big penis?", exclaimed the policeman. How do you know that?

Old Lennie replied, "Because every time I come into town, people point at us and yell......

LOOK AT THE FUCKING BIG DICK ON THAT MULE!!!!!!!!

Yup. Lots of good commentary on that site.

If the terrorists can turn us into a country of conformists, then they have won, in a way. One of the things they hate the most about the USA is our secular, pluralistic, open society, where almost any idea can be expressed, challenged and discussed. Freedom scares the heck out of them.

Ahh - good point! My mistake, equating entry requirements with the
much broader term "standards".

Then let me rephrase:

Were the license test standards lowered? Sure seems like it to me.

And you, in your oblique way and evidently without even knowing what
you say, therby endorse tests which allow the examinee to pass without
knowing anything about the material being covered.

A very classic example of what is wrong with ham radio, and indeed much
of our society today.

Which they are sworn to do, and from their training films which have
been displayed and described on various media, they are well into a
"holy war" with the West, oarticularly the USA and a few other major
nations. An interview with a Mullah in Pakistan he stated that the USA
doesn't desreve to survive, and it is the duty of every Muslim to do his
part to see that it does not survive. That's poerful stuff to a culture
where 70% of males are illiterate and thus depend on their religious
leaders for almost all their direction, and the situation is even worse
for women. They believe they have the duty to die in their quest to
protect Islam from the decadence of the West.

> > The Taliban and
> >> others who harbor terrorists can take the path of peace and simply comply
> >with
> >> President Bush's requests.

Either you or I have misunderstood his remarks. He said we're at war,
and it is a war on terrorism and terrorists, and it won't be won till
there are none of them remaining. To merely put it on hold yet again, so
that they can restart it all over again once the current flurry settles
down will be only playing into their hands yet again, and that is not
what I got from either the P{redidents nor those of anyone else's
remarks who is in a position of authority. Britishs Prime mInister Tony
Blair was particularly to the point. He essentially said it's either
them or us.

That wouldn't end it, I am certain.

>
> Sure it will.

Jim, don't you keep up with these things? I fear all too many Americans
do not. This is just an escalation of a movement that has been underway
for many years, and is just now getting serious to the point that it is
considered by the majority of us to be anything more than just a nutty
splinte group. it is NOT. There are thousands of them living among us,
unknown to most of us. These opeople are deterrmined to wipe us out, or
be themselves obliterated in the effort. They believe, and are
constantly told by their clerics, that the way to Paradise is to kill
the infidel. That's us, in their minds. And no tall of them are
illiterate, many well educated are centerally located within their
ranks. I think they hate us for our human successes, a sort of "If we
can't have it you can't either" syndrome.

As I recall, all President Bush requires is three things:
>
> 1) All terrorists to be in custody so they can't do more terrorism.

> 2) All organizations, training facilities and safe havens for terrorists to be
> dismantled and shut down.
> 3) Those responsible for the attacks on the USA brought to justice.
>

And how will we know when "all terrorists" are in custody? Answer: we
cannot possibly know. There are many thousdands already trained in camps
across the Middle East and more in training as we speak. TV coiverage
shows women and small children cheering and celebrating at the news of
the WTC collapse. That makes the bulk of a whole culture our enemie,
across numerous borders including even our own. You think we can round
up and incarcerate all of them?

> Simple. By all accounts, the organizations responsible are not very large -
> probably less than the number of innocent people killed already.

Not by any stretch of the imagination.

>
> >Someone's got to pay for Sept 11.

> them for cleanup, compensation and rebuilding.
>
> >By all accounts there are many of them ready and willing to do so.

> >
> That's up to them, not us.

Sept 11 was up to them, not us. The aftermath, and what to do to
prevent further episodes is up to us. If we let them set the agenda they
will be more than glad to do so, and we can have this convesation all
over again in the (probably near) future.

Your answer above assumes the ham can first
find them on sale someplace for six for $1.50 (60 watts max)
Hams are incredibly cheap you know. Four per a dollar
at the Dollar Express is even too much to pay.
Anything above 60 watts will cost more to operate, he needs the extra
electric to operate his Alpha or SB-220 at full power
so he can talk to his pals on 75 meters who are all within
100 miles of each other....

(you naysayers tell me if i'm wrong....I didn't think so...click.)

You started out at or near the peak of the "incentive licensing" era.
I remember those days well.

I got my Novice in 1967 (age 13), Tech and Advanced in 1968 and Extra
in 1970. Would've had the Extra much sooner but for that danged 2 year
experience requirement.

Thanks. There are all sorts of related issues, too. For example, back
then the cost of ham gear in real dollars was much higher than today,
unless one had the time, know how and ingenuity to do a lot of
building and salvaging.

A typical basic '60s Novice station with all accessories cost $100 to
$250, depending on a bunch of factors. One could spend a lot more, of
course, and some of us managed on a lot less, but the typical Novice
spent about that much to get started. Compare that to what the same
money (allowing for 30-40 years of inflation) buys today.

> I guess I have forgotten that all one needs to
> do is plug it in to
> get on the air today.

In many cases, yes. Oddly enough, there are more and more hams who
want to go beyond being "appliance operators".

> requirement were at the time. I would impose a written exam that demanded
> comprehension
> of the material rather than mere memorization.

I'm gonna do the "devil's advocate" thing here for a bit.

OK, lets see what that would look like. Let's call the two classes
"Basic" and "Full".

The first question I have is, what privileges would "Basic" licensees
have besides being limited to VHF/UHF?

If they have all privileges, then why is a more involved written test
needed to access HF? Sure, the rules and regs and maybe some
propagation stuff, but why is more theory learning needed to operate
on 14.250 than is required for 145.200?

Second question - what happens if/when the code test goes away? There
is no speed requirement in the treaty, but 5 wpm has been the de facto
standard for half a century. FCC has made it clear that the ONLY
reason we still have a code test is because the treaty requires it.

Third question - how do we design a written exam that demands
comprehension rather than pure rote memorization if we are limited to
the multiple-choice format and wide open Q&A pools?

> As to how to integrate current licensees into this, that would be difficult.
> I can only state that from my personal perspective I would not be against

> just grandfathering say
> all of those that hold General licenses and above.

I think you mean that all Generals, Advanceds and Extras would simply
get "Full" licenses, and everybody else would get "Basic" licenses.

First problem is that there are at least 130,000 hams with either Tech
Plus or Novice licenses who would lose their HF privs.

Second problem is that about 220,000 Generals and Advanceds would get
free upgrades to "Full", which would not sit well with some of those
who had passed tests to get full privileges.

> I think this would go a long way toward eliminating the current division
> that exists in ham radio.

When the FCC did a similar thing in late 1952, there were a lot of
hard feelings about it. One guy went so far as to call a selective CQ
that specified "no kids, no lids, no space cadets, Class A operators
only".

We don't need more of THAT!

"The bulk"??? Dick, your paranoia is showing again.
The *bulk* of those cultures are worrying about
everyday things just like we do. How many Moslems
are there? What percentage are terrorists? I don't
mean to minimize our risk but you are acting like
the terrorists and painting with the flip side of
that same broad brush that they are using. It's
like saying the bulk of US Southerners sympathize
with the KKK.

As far as those forms go, you were given the correct set. Many license types
now use the same set of forms.

Please produce the posting where I said, "Ham radio is nothing

but trivial". On the contrary, I have said ham radio really
earns its keep during certain emergencies. You continue to suffer
from your mental confusion between ham radio functions (after
licensing) and ham radio testing (before licensing).

There would be no need for a more involved written test. Only a written
test that was designed to support full privileges, whatever that might be.

>

When that happens, all the "basic" licensee would need do is take and pass
the "full" licensee written exam.

> Third question - how do we design a written exam that demands
> comprehension rather than pure rote memorization if we are limited to
> the multiple-choice format and wide open Q&A pools?

That would require reinstating some of the procedures used years ago..
get rid of the Q&A pools, require demonstration of simple skills, a
performance
or hands-on test, if you will, perhaps drawing a schematic, etc.

> > As to how to integrate current licensees into this, that would be
difficult.
> > I can only state that from my personal perspective I would not be

That would be correct; however, if the current Tech Plus were to take and
pass the "full" written, then they would get full HF privileges.
Current Novice would only need pass the "full" test.
Current Tech w/o code would remain "basic" licensees, unless they take the
5 WPM
code and "full" written test.
Once the code requirement were eliminated(which it will be)..then the taking
of the "full" written will be all that is required.
A "basic" licensee would then be required to do nothing but pass a "full"
written test.

>

It's quite likely that sometime in the future the Advanced license will be
abolished and
they will be grandfathered in as Extras. Yep, some will complain.
As to the Generals getting free upgrades, you just can't please everyone.

What I have explained here is the way it works in MOST countries today. It
works
for them, it should work for us.

Correct, we don't, but that was a personality disorder. We can't regulate
that :)

If Clinton or Gore were in office, they'd think exactly like you. They'd
mull themselves to death and nothing would be done. Bush seems like a no
nonsense guy whose rhetoric's been excellent. I'm worried that it's all
rhetoric because he will not push the button. Remember that millions of us,
not I, voted for GW because he PROMISED a better military. Millions voted
for him by knowing that Colin Powell would be there. So now that the
military has taken THE dominant role in our society, let's go GW. If Powell
is restraining him, then toss his ass out and put in Norman Schwartzkopf who
is as good a statesman and a better officer.

If all you want to do is to change the address and the license is
not within 90 days of expiration, log onto the ULS and do an
Administrative Update.

ULS = <www.fcc.gov/wtb/uls>

DO NOT do a Modification - it will only screw up the works.

I agree. But while it's not true that an attack on the KKK is an attack on all
Southerners, Muslims feel that an attack on any Muslim is an attack on all of Islam. I heard one moderate Pakistani gentleman this morning on the news saying that the life of one Muslim is worth more than the lives of all Americans. Unfortunately, Arab Muslims in general apparently don't think as highly of us as we do of them. I think it may help them get through the day to blame their lot in life on Westerners. But that's just my speculation.

> Third question - how do we design a written exam that demands
> comprehension rather than pure rote memorization if we are limited to
> the multiple-choice format and wide open Q&A pools?
>

There are ways to do this. There was a discussion here earlier about one approach:
Simple example: Rather then list 3 questions on basic Ohm's Law calculations with the numbers already plugged in. Change it to something like:
What is the voltage of a circuit if resistance equals x and current equals y.
Have a long list (say 20) of pairs of x and y.
Do this similarly for questions solving for I and R.

Now, if someone wants to memorize 60 numbers rather then 1 formula, god bless his pea brain.

A similar approach could be used for all of the other theory questions.

Since the band assignments, regs, etc. are nothing more then memorization (with a fair amount of common sense for many of the regs), they can remain unchanged.

Not in THIS country, Amigo. The civil government STILL runs the Armed Forces. As "hawkish" as I am, I would be very, VERY worried if it were the other way around.

>If Powell
>is restraining him, then toss his ass out and put in Norman Schwartzkopf who
>is as good a statesman and a better officer.

I would not care to try and "rate" either on their "statesmanship"...I don't think you know of Powell's "civil" experience, either. Many, MANY yers in the White House as a "White House Fellow".....I DID vote for GW, but CP would have made a great president.

As for "holding anyone back", I think any restraint on CP, GW, or anyone else's part until a DEFINITE target is defined is prudent and wise. We'd look foolish blowing up empty caves or tents.

Powell and Stormin' Norman both deserved a fifth star and a Medal Of Honor

But the problem is not the tests, Dick. They appear very similar to the tests I took years ago. The difference lies in the students and their desire to learn. It appears today's students don't have the drive, the desire for knowledge, that students had just a couple of decades ago. Happily, I can say today's students do seem to have more drive to learn then students did just a few years ago. So perhaps we're seeing a slow reverse in the widespread aversion to education and knowledge in this country. Sadly, that trend is very subtle and slow (which means that is can be reversed easily by just a few extra, well hyped, movies and television shows directed towards kids featuring morons as the hero).

I don't remember Cecil, or myself, ever saying anything of the kind about ham radio, Dick. However, as far as these newsgroup discussions are concerned, the words here are certainly not the Declaration of Independence, Gettysburg Address, or the Emancipation Proclamation. They're simply an exchange of words typed on a computer by a bunch of guys and gals with similar interests. Lets not try to make this anything more than that by demanding satisfaction whenever "honor" is violated.

Why would you insist on calling the VHF/UHF license "Basic?" The Technicians who currently use VHF/UHF have full operating privileges, using all available modes, on every ham band above 50 Mhz (hardly "basic" privileges). And the only reason those frequencies were selected, as opposed to some other group of frequencies, is because an international treaty restricts the use of frequencies below that without knowledge of Morse code. Why would a treaty, or a lack of code, or no use of HF, automatically define a class of operators as "basic?"

Lowered from where to what? I just don't see a major change in the
standards. Virtually all of the same material is covered by the exams.
The intent of the exams remains the same (to cover the basics needed
for entry into the various levels of ham radio). The goal of the exams
remains the same (to cover rules, procedures, safety, and basic
skills). And the result of the exams appears to be the same (I've seen
no great change in the people receiving new licenses or upgrading -
most seem fairly decent to me). Where do you see evidence of lowered standards?

And that is exactly my point. Thanks, Jim, for the accurate
elaboration.

Of course no majority of Muslims are currently terrorists. But just as
certain is the fact that a majority are sympathetic to a Muslim
initiative against a non-Moslem entity. That is a part of their religous
makeup, as you said. I see no way to ignore that without increasing our
exposure.

It isn't rocket science, Dwight. People respond to demands or challenges. When there was a code test, it wasn't a problem to learn code and take the code test. When there was a test over technical material, and you knew that you had to learn enoughtheroy to figure out what the question was asking and how to correctly answer it, you prepared yourself. Now people respond to the challenges as they exist. Evidently they don't stimulate much in the way of action responses, do they?

I hope that is no surprise to anyone. We were taught this when we were in
school in my 'lil 'ol hometown in NY. They've been "well into a holy war"
for many years with the west. Technology allows them extra measures, extra
reach, etc.

As your opinions are your own, so are the opinions of the extremist you
quote above. He *says* it is the "duty of every Muslim to do his part to
see that it [America] does not survive." I am sure there are Muslim
extremists who believe him, and I am just as sure there are many more than
that [Muslims] who do not believe him. It does not take education to decide
right from wrong.

>
> They believe they have the duty to die in their quest to

>

And, what *IF* the impact of non-violent measures causes a behavioral
difference that equates to the absence of terrorist acts? Sure, it is
highly unlikely. But, let's not debate from the "highly unlikely" aspect.
Dick, if the terrorists would subside with their activities, or were
rendered incapable of doing violent acts; and if the measures taken could be
sustained longterm; would that satisfy you that there were "no more
terrorists"? It would me.

>

Terrorism is eternal. Love is eternal. Conflict is eternal. Peace is
eternal. It just depends on "what side of the fence" you happen to be born
on. "We" will always have to deal with extremists who act out through
terror in one way or another. It is a fact of life.

>

I think to the contrary. It is just being realized by many more of us that this is not a "nutty" splinter group. There are many of us who've never believed these types of people were nutty. The point is that I am not willing to give up much freedom, much civil right, much in the way of anything, to comply with the demands of these people. In my opinion, to do so is to admit to them that they won the day they killed thousands at, and destroyed, the World Trade Center in NYC.

>
> There are thousands of them living among us,
> unknown to most of us.
>

That sounds near hysterical, Dick. Once again, I don't mean to minimize a point that we all need to be just a little more aware of our surroundings, etc. BUT, there are thousands of *who* exactly? Muslims? Sure there are. Terrorists? I doubt it--unless you want to count the KKK, the Posse Comatatus (sp?), the Nazi-whatever this-or-that, and on and on. There are thousands of "them" meaning what?

>

> can't have it you can't either" syndrome.
>

They "hate" us because those who are able to be convinced want to hate someone, anywhere, anytime--doesn't matter who. The message could just as clearly be to them to hate all space aliens that land in green machines during the month of January. The message they listen to is from a group of people who are able to convince others to think just like them, to act just like them, and to act on behalf of them. You didn't see Usama in a plane himself, did you? His followers, who have been told to hate America because Usama decided sometime along his life that *he* hates America, have simply been brought to the brink of action by a very convincing person.

It scares me that you say the "bulk of a whole culture" is made to be our enemy. Dick, please think about it. Don't you think that if the bulk of a whole culture was our enemy that we'd been in a whole lot more trouble a whole lot longer ago? These folks are the minority, I can nearly assure you. It is just that they are very clever, very resourceful, and very dangerous. They make themselves look like many, but they are few.

>

>

In my opinion, with the way "we" are acting in this country, they have already set the agenda. I can't think of a person I know that has not altered their life in some way in response to the actions of these creeps. I will not walk in our underground tunnels in the city I work in, I will not fly, not ride a bus, not ride a train, not travel right now, not go very far from home at all (if I am going to die it is going to be at home). Many, many of us are doing things in reaction to what happened. Many of us are "agreeing to" and practically begging our government to just "do whatever you have to do" to take care of this for us. If that isn't meeting the agenda, I don't know what is.

Hey, like I said, I do not have the capability to be a pacifist. However, my point is that there are those (EXTREME) pacifists out there who believe that the idea is that, OK, if they all die--then there is no one left but those doing the killing.

I daresay that pacifists are generally also the people that believe in Karma and life after death--leaving them to inherit the peaceful Earth they believe they will return to when it is all over (or maybe that's Heaven). But, you get what I mean.

By that same "interpretation" of words, N2EY is not a "master
of morse code." :-)

Sorry, but that kind of semantical silliness doesn't prove anything.
Here is what N2EY wrote:

==========

Subject: Re: A Challenge to the NCTA
From: n2ey@aol.com (N2EY)
Date: 22 Sep 2001 16:03:49 GMT

In article <3BAB8678.8080704@IEEE.org>, CAM <Cecil.A.Moore@IEEE.org> writes:

>There are thousands of hams who passed a Morse
>code test and vowed never to use Morse code again.

There are thousands of hams who mastered the Smithc chart and vowed never to
use it again, either.

Modern simulation programs eliminate the need to use tools like the Smith
chart.

73 de Jim, N2EY (who hasmastered, and uses, both Morse and the Smith chart)

==========

N2EY made a claim. He has not provided any verification
of that claim.

N2EY has not provided a single name-callsign of a single one
of the "thousands" of hams who had mastered the Smith
Chart and "vowed never to use it again."

N2EY has not provided a single program name or source
of the "modern simulation programs" that "eliminate the
need to use a Smith Chart."

N2EY was being fascetious in the beginning, of course,
but continues one of his never-ending stories on trying to
prove he was "right" while others were "wrong." :-)

>>>It is clear that one of LHA's "prime directives" is that what professionals
>>>do and use is THE criteria to be applied to what amateurs do. In other
words,
>>>if the pros use something, it's good, if they don't, it's bad. What amateurs
>>>do is of no consequence to LHA.
>>
>>Really?!? :-)
>>
>Yep. You should read what you write, sometime.

Wrong. To "prove" the above assertion requires demonstrated,
documented proof of telepathic powers...and...

N2EY should read the entire texts of what others are doing,
have done, especially in the modern era.

Please supply the model number and manufacturer of a
professional network analyzer that does NOT use a Smith
Chart format display on its front panel.

>>What is so wrong about applying professional techniques and
>>experience to what is essentially a hobby activity?
>
>That's not the subject under discussion. And amateur radio is more than a
>"hobby activity".

Hmmm? The subject here WAS "mastership of the Smith
Chart." It also seems to be one of the marathon postings of

N2EY trying to disprove things he said in public. :-)

So, amateur radio is "more" than a hobby activity. How much
is "more?" 0.1%? 0.01%? Is the "more" a long discussion
about old "bad" songs? Is the "more" another long discussion
on world politics, US foreign policy, or political ideology?

>You apply the practices of "professionals" as the SOLE criteria of judging
>what amateurs do.

Sorry, that is an out and out LIE. LIE. :-)

>What amateurs do has no bearing on the issue, in your judgement.

The only way N2EY's sentence could be close to "truth"
would be that radio physics of amateur radio are different
than every other radio service. That's obviously untrue.

Radio amateurs use radios and electronic test equipment.
In some cases the more affluent radio amateurs have the
same test equipment as are used by professionals. In
other cases their test equipment is simpler, such as the
"noise bridge" (a wideband-source admittance measuring
bridge circuit) used commonly with transmission lines. A
noise bridge and a pocket calculator can quickly yield the
plot points for a Smith Chart to determine antenna-line
impedance, VSWR, bandwidth, and in what direction to
begin matching a mismatch for maximum power transfer.
Total cost is less than a tenth of professional equipment.
[good articles are found in HR on CD from the ARRL]

>>>What does it matter WHAT I do professionally, LHA?
>>
>>It creates some basis, some bona fides for N2EY's claims
>>such as being a "master of the Smith Chart."
>
>I never made such a claim. Produce the post where I claim to be "master of
>the Smith Chart"

I just did. But...note the misdirection. N2EY avoided a
direct answer to his profession, where he works, what he
does in detail other than a very, very general statement.

>Then produce the post where I wrote that I was "master of the Smith Chart".
>Since you used quotes, you are referring to an exact phrase.

No, I use quote marks to distinguish them from ordinary
words. The newsgroup text doesn't allow full transmission
of italics, bold-face, underlining, or font changes at every
ISP.

I already quoted the first posting of N2EY, verbatim. He will
argue and argue and argue that his words didn't mean what
he wrote...and then make outrageous claims of others'

writings. :-)

>All my posts are in google/deja.

AOL allows storage and retrieval of the last 30 days' messages.
This is 3 Oct 01 and a date of 22 Sep 01 is easily within that
30 day window.

Is N2EY going to make another neverending story about the
AOL storage being "false?" :-)

>Easier to do what one is best at. In my case that's electrical engineering,
>not managing a company.
>>
>>Why is N2EY not proud of the company he works for?
>
>I am very proud of the company I work for.

That's nice. Proud enough to name it? Or are we all on
some kind of "honor system" where N2EY's claim is
"valid" if he says so?

>>Is anyone "attacking" N2EY's "professional" activities?
>
>Not yet. But you will, given the chance. I've seen you do it plenty of times.

Ah, so I "will" do that! Let's add prescience to the telepathic
powers. Please show credentials of fortune telling and
telepathy or license for same... :-)

>What claims have I made that are based on my work experience? C'mon, produce
>some posts.

How? Where does N2EY work? What does N2EY do in detail?
:-)

>It is interesting that LHA does not mention my academic achivements.

Oh? I've acknowledged the grant of a US Amateur Extra class
amateur radio license. Isn't that an academic achievement?
Other amateurs have said such a thing IS an academic
achievement. :-)

How does a BSEE with/without an MSEE equate with an
amateur radio license? Are they equal? In what regard?

A few in here who are big on BS but don't have a BSEE
like to denigrate and depreciate those who have a bachelor
of science degree but no amateur radio license. I don't do
that. Does N2EY?

I won't take up the "T-R" (or break-in) comments made
about three years ago and default on everything but a

few of N2EY's comments. This endless misdirection of
having to go back a year or more to "prove" something
is not about the subject but of the challenger's wounded
ego. Supply your own bandages.

>>Is "Electric Radio" available on the newsstands? At any
>>periodical vendor?
>
>Nope. It's by subscription only. So what?
>>
>>"Electric Radio" does have a website. A fanzine is a specific
>>magazine devoted to fans (enthusiasts) of the magazine's
>>central topics. There is nothing wrong about fanzines or their
>>existance. Hundreds, perhaps thousands of different fanzines
>>are published in this country, covering a variety of subjects.
>
>Like "Proceedings of the IEEE" ;-)

Is N2EY saying that the IEEE publishes fanzines?!?

That's like saying the NEJM or JAMA only carry articles
about first aid.

Tsk, tsk, tsk, tsk.

>It was. I did it, I should know.
>
>>It would
>>only be "easy" if you knew a lot of radio, not just a "little."
>
>Saying I know "a lot of radio" would be bragging.

It is...and you do...without providing any proof.

>Seems like LHA wants to "mystify" radio design and construction by fostering
>the idea that a person needs to know "a lot of radio" to build their own
>equipment.

Nobody needs a "lot of radio [knowledge]" to build their own
electronic equipment. There are many kits of all kinds. All
that is required is asembly skill. With enough ARRL
Handbooks and QST editions, anyone with assembly skills
can MAKE their own amateur radios...designed by others.

DESIGNING one's own equipment, including making it work,
is quite another story.

>But I think what REALLY bugs LHA about me is that I not only design, restore,
>repair, build, align and OPERATE ham gear, but that I've been doing so for a
>very long time. My very first transmitter was a homemade one, which I built
>and operated at the age of 13.

Doesn't bother me a bit. :-)

I converted two ARC-5 sets to 115 VAC primary power in 1947,
got them working. I was 15. (N2EY didn't exist then) Sold
both of them for a fair amount of profit (in those days and as
a teen-ager). Built a number of other things. At age 21 I
was "working" at a military radio station where there were
36 HFand 7 VHF transmitters operating 24/7...later on...well,
you know what will happen if I post a "CV" in here, don't you? :-)

>In LHA's reply comments to the FCC, he recommended that there be a MINIMUM
>AGE LIMIT for ALL classes of amateur radio license.

Still do. Most young teenagers don't develop the responsibility
necessary to operate unattended...in my opinion. Sub-teens
even less so. But...what has THAT got to do with the code-
nocode test subject?!?

>He expressed shock and outrage
>that young children were being licensed, even though there have been young
>hams for many years, and NO recorded problems due to the youth of the
>licensees.

"Shock and outrage?!?" Oh, my, how N2EY does exaggerate!
:-)

Let's hear it for the responsible 4-year-olds who can legally
operate a transmitter! Let's hear it for the VEs who passed
4-year-olds' written test elements! 4-year-olds can read
with full comprehension of the the text material!

>>>I used to do RF design professionally, by the way. Now I do other types of
>>>design professionally.
>>

>Nope. Because it happened.

Heh. NaN again, this time at minus infinity. Claim only. Fish
story by the sound of it..

>Show us where I claimed to be a "master of the Smith Chart".

Already did.

>>Not correct. The FCC approves the VEC question pool
>>but the VEC QPL included questions on the Smith Chart.

>
>A few questions out of thousands. And a prospective ham could get all of the
>Smith Chart questions wrong and still pass the test easily. Most ham exams
>probably don't include any Smith Chart questions at all.
>
>That means they don't think it's very meaningful.

All of this isn't about a Smith Chart at all. It is all about N2EY
and his viewpoint of amateur radio testing and why everyone
who doesn't think like him is "wrong." :-)

The VEC QPL make up all the written test questions and
answers. The FCC approves the pool. The FCC grants
licenses. The FCC will determine what is meaningful for
their regulatory task...but the FCC does listen to its
citizens...ALL of them.

So far, the morseodists haven't proved their case well
enough to convince the FCC to retain all those levels of
morse code testing. The FCC hasn't thought that morse
code skill was worthwhile proof towards amateur radio
license granting since 1990. The FCC hasn't changed
their minds. Neither have the morseodists. :-)

5330. Re: Extra Class - Not without experience

Newsgroup: rec.radio.amateur.policy

>Do this similarly for questions solving for I and R.
>
>Now, if someone wants to memorize 60 numbers rather then 1 formula, god
>bless his pea brain.

That seems to be a reasonable test format to me. It might
be a problem in whatever grading format is in use by the
VEC. There's nothing that appears to violate any regulations
in doing that.

>A similar approach could be used for all of the other theory questions.
>
>Since the band assignments, regs, etc. are nothing more then memorization
>(with a fair amount of common sense for many of the regs), they can remain
>unchanged.

The FCC regulations presently require a question pool with a
minimum of 10 times the number of required written element
qustions. That's a minimum. There is no maximum limit.
The Question Pool Committee could generate 20 or 30 or 40
times the required number and it would be quite within
regulations. As it is today the QPC can specify the KIND of
questions as well (not so before April 15 last year). There
could be 40 times as many questions on a specific topic
(such as Ohm's Law) and still retain 4 possible answers for
each question. That would not upset any grading grids.

There would be a lot more work for the QPC to generate a
larger question pool but each element's pool is changed
every two years. That's at least 6 months to work out one
pool content plus getting approval from the FCC.

If the pool becomes large enough, the "memorization" effort becomes huge and even the gifted mnemoic-talented test takers would have trouble. It would be much, much easier to learn the topics as a subject rather than a memory exercise...and that seems to be the outward complaint of those long-timers who passed their last tests long ago.

The Question Pool Committee should be open to suggestion. They could be sounded out on improvements.

writes:

>
>Q. How many hams does it take to screw in a lightbulb?
>
>A. One. He simply holds the bulb to the socket, and the
>rest of the world revolves around him.

As it happens, I screwed in a lightbulb just this afternoon. However,
I didn't wait for the world to revolve around me, or it would have taken
24 hours to get the job done! Moreover, since I was standing on a
stepstool instead of a revolving platform, in reality, I would have
revolved around with the world, instead of the world revolving around
me. Thus, it still would have been impossible to get the job done.
I had to resort to the old-fashioned method of spinning the bulb into
the socket with my hand, until it was snugly in place.

Now, I'll admit that since I'm a Pre-Restructuring Extra-class ham, it
was only natural for me to choose the correct method for changing this
light bulb. I even made a more enlightened choice of the bulb itself,
one of those high-output, low-energy consumption flourescent jobs,
with the coiled flourescent tube instead of the traditional bulb. So,
now I'm getting more light than a 75-watt bulb, and only burning
20 watts in the process!

So, to answer the question, yes, it does take only one ham to
install a light bulb. But that ham must be a Real Ham in order to
do the job right!

Oh, by the way, I'll also add that their numbers *don't* mount to much of anything, Dick. Their *numbers* don't. Do you happen to know the estimate on the cost it took these few to accomplish this act in NYC? $200,000!!! I don't know if that estimate has changed, but that is one figure I heard relayed from a Pentagon official to one of the reporters.

You're the one out there looking for some huge number of "enemy" to infiltrate and change your life. You're the one out there implying that we must be suspicious of "many thousands" of them who are among us. You're the one who apparently can't recognize that it doesn't take those "thousands" your delusional mind has come up with, to do what happened or to do it again.

If I'm taken out, and you're enlightened? I'll stay with taken out. I at least have a good understanding of the "enemy."

>Isn't that what the Blues Brothers called their nun - "The Penguin"?

Yep. None of that was an exaggeration, by the way.

"Penguins at two o'clock low!" was a typical warning of my school days.

>Even as adults they had to sit in those tiny desks. I forget the name
>of their church, but I think George Carlin went the Our Lady of
>Perpetual Motion. :-)
>
Garrison Keillor refers to "Our Lady Of Perpetual Responsibility" and it was Cheech and Chong who referred to "Our Lady Of Perpetual Motion" in the same sketch that gave us "Sister Mary Elephant" (derived from Oliphant) and "Sister Rosetta Stone"

Big Daddy Graham does a song about nuns - the line I recall is "They're what the dinosaurs feared".

5340. 10 Secret Rules of RRAP

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-04 17:15:16 UTC
From: k0hb@qwest.net
Message-ID: <b7c5262e.0110040915.5241c724@posting.google.com>
Source record: 21584

Top Ten Hidden Secrets of r.r.a.p.:

10. K4YZ doesn't understand simple logic. Never has, never will.

9. Lennie wants a pony but, due to a secret deal between Dave Sumner and Riley Hollingsworth, he'll never get it.

8. Phil Kane is our resident legal advisor. W1RFI is our manners cop. Neither have any jurisdiction outside their own imagination.

7. Cecil provides millions of hams with delightful entertainment just like so many of the shows on the QVC and K1MAN networks.

6. W5TIT is rumored not to have any.

5. Ignore W2ILP. All of us do.

4. If you jiggle the handle on the r.r.a.p Executive Washroom you can get in there sometimes. Just be sure and do it after hours because if you get caught sneaking in you'll have to ride next to K3LT on the team bus on the trip to Dayton while he explains the advantages of CW.

3. We're actually all very nice here. We only flame the clueless and/or annoying.

2. OK, so we do flame some other people. But the dump hucks had it coming.

1. RRAP Speed Limit: 5WPM (Farnsworth format 18/5).

With all kind wishes,

de Hans, K0HB

Your argument isn't with me, Cecil. He's considered by his community to
be moderate in his views. Moderate is a relavtive thing. I'm certainly
not going to argue about the similarity between moderate Nazis and
moderate fundmentalist Muslims.

> international treaty restricts the use of frequencies below that
> without knowledge of Morse code. Why would a treaty, or a lack of
> code, or no use of HF, automatically define a class of operators as "basic?"

Let's back up a second.

In an earlier post, Bob, W7RJR, said we should get rid of Incentive
Licensing. I asked him what sort of license structure we should have
instead. He outlined a two-class structure: a VHF/UHF-only license
with no code test and a simple written test, and an all-privileges
license with both sending and receiving code tests and a more advanced
and detailed written test. That's why the names "Basic" and "Full"
seemed appropriate.

I asked Bob how the existing licenses would transfer into his proposed
structure, and he saw the "Basic" as being the same as the current
Tech. (Correct me if I'm wrong on this, Bob). So his proposed VHF/UHF
licnese would have full privileges above 30 MHz.

The question then becomes - if the VHF/UHF-only licensees can use all
legal modes and full power on all legal VHF/UHF ham freqs, why do they
need another, more detailed written test to operate HF/MF? The only
things that would absolutely have to be on such a test are the

HF/MF-specific rules and regs, plus some HF/MF specific propagation and operating stuff. Yet as I read Bob's idea, it seems that he would put a lot more than that into the "Full" written.

See what I mean?

If you don't like the name, we'll change it.

The radical ones, yes. But Islam is not a monollithic religion. Are
all Christians like those in the KKK? (They burn crosses, the symbol
of Christianity).

And how do we explain the Gulf War, where Christian/Western countries
made an alliance with Muslim Saudi Arabia and other Muslim countries
to free Muslim Kuwait from Muslim Iraq?

What about Muslim Iraq's long war with Muslim Iran?

A war which THEY started and which THEY can end at any time. Of course
I don't think they will just give up.

What I'm trying to say is that Bush & Co. have not gone off and simply
attacked Afghanistan or some other place. They have not unleashed
retaliation or revenge. Instead, they have set up the goal of ending
terrorism. The Taliban and others can cooperate with that goal or face
the consequences - but it's THEIR choice.

However, before the reduction in the code requirement, there was also the added knowledge that code was a necessary radio communications mode as an extra incentive to learn it. That necessity is is much less today, so the incentive to learn code is also much less today.

Dwight Stewart (W5NET)

5350. NY/NJ/PA "Radio" Octoberfest this Saturday

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-05 01:55:37 UTC
From: k3bu@aol.com
Message-ID: <20011004215537.08376.00001076@mb-ch.aol.com>
Source record: 21594

Reminder.
NY/NJ/PA "Radio" Octoberfest this Saturday

You are all invited to (Radio) Octoberfest at Verkhovyna Mountainview Resort in Glen Spey, NY (NY,NJ,PA tri-state area) hosted by the Tesla Radioclub and Ukrainian-American Cultural Foundation - UACF on October 6, 2001, starting at noon till ???

Come and have fun meeting other hams, DXers, contesters, while having good time and drinking Octoberfest beer. Enjoy Ukrainian and German food, listen or dance to endless polka's. Wear your badge, hat or shirt with callsign proud and meet other radio aficionados around the "radio" table.

140 acre Verkhovyna resort is the new home to Tesla Radioclub N2EE station. Join the semi-serious discussion of how many towers do we need to put up there. Come, join the club and get a free beer.

Directions:
Take Hwy. 84 to Port Jervis, NY exit 1; follow Rt. 6 through Port Jervis to traffic light with Rt. 97/42 signs, go through and follow Rt. 97 west for 10.8 miles to Pond Eddy (motel on right, bridge on left), turn right onto High Rd. (Rt. 41), go up the steep hill for 1.7 miles, Verkhovyna is on the left. Plenty of parking.
Maps and sattellite view of the resort are at www.UACF.net home page under directions.

See you all there and join us yodeling in Morse code :-)
Nazdorovya, Ein Prosit!

Yuri, K3BU
pres. Tesla Radioclub

>>>existance. Hundreds, perhaps thousands of different fanzines
>>>are published in this country, covering a variety of subjects.
>>
>>Like "Proceedings of the IEEE" ;-)
>
>Is N2EY saying that the IEEE publishes fanzines?!?

By YOUR definition, that's what they are:

"A fanzine is a specific magazine devoted to fans (enthusiasts) of the magazine's central topics." That's an EXACT quote of YOUR words.

Is "Proceedings" available on the newstands? Not any that I know of.
>
>That's like saying the NEJM or JAMA only carry articles
>about first aid.

How? Nothing in the definition YOU gave specifies the level of the articles.
>
>Tsk, tsk, tsk, tsk.

"There is nothing wrong about fanzines or their existance. Hundreds, perhaps thousands of different fanzines are published in this country, covering a variety of subjects." Another EXACT quote of YOUR words.

>>It was. I did it, I should know.
>>
>>>It would
>>>only be "easy" if you knew a lot of radio, not just a "little."
>>
>>Saying I know "a lot of radio" would be bragging.

>

>>But I think what REALLY bugs LHA about me is that I not only design,
>restore,
>>repair, build, align and OPERATE ham gear, but that I've been doing so for a
>>very long time. My very first transmitter was a homemade one, which I built
>>and operated at the age of 13.
>
>Doesn't bother me a bit. :-)

It sure seems to. You would have denied me, and many other young hams, a
license at that age.
>
>I converted two ARC-5 sets to 115 VAC primary power in 1947,
>got them working. I was 15.

So? Converting ARC-5s was old hat to me by age 15. All one had to do to the
receivers was a little rewiring of the heaters, add a gain pot, headphone jack
and a BFO switch, and connect to a power supply. Doesn't even require "assembly
skills".

The transmitters are a little more work, but not much.

> (N2EY didn't exist then)

So? All that means is that you are older than me. I had more ham radio
operating experience at age 15 than you have now. Infinitely more.

>Sold both of them for a fair amount of profit (in those days and as
>a teen-ager).

Ah yes, the professional angle again. QED.

> Built a number of other things.

Uh huh. Did you DESIGN them?

>At age 21 I
>was "working" at a military radio station where there were
>36 HFand 7 VHF transmitters operating 24/7.

Sure - the Army sent you to radio school, and then you got to stand watches on
equipment designed, built and installed by others. That doesn't even take
"assembly skills". ;-)

>..later on...well,
>you know what will happen if I post a "CV" in here, don't you? :-)
>
You post it so often that nobody reads it anymore.....;-)
>
>>In LHA's reply comments to the FCC, he recommended that there be a MINIMUM
>>AGE LIMIT for ALL classes of amateur radio license.
>
>Still do.

Ageism.

> Most young teenagers don't develop the responsibility
>necessary to operate unattended...in my opinion.

It's an opinion based on prejudice, bigotry and bias. In my opinion, ;-)

>Sub-teens even less so.

It's an opinion based on prejudice, bigotry and bias. In my opinion, ;-)

Name some amateur radio problems caused by licensed hams under the age of 14.
C'mon, if they are so irresponsible, there should be plenty of problems and
enforcement actions to report.

> But...what has THAT got to do with the code-
>nocode test subject?!?

Why are you so stuck in the past? The code test issue is a dead duck, as I have
said many times.
>
>>He expressed shock and outrage
>>that young children were being licensed, even though there have been young
>>hams for many years, and NO recorded problems due to the youth of the
>>licensees.
>

>"Shock and outrage?!?" Oh, my, how N2EY does exaggerate!
> :-)
Not at all. I read all of your "reply comments", some of which were not replies at all. Reply comments are ONLY supposed to be about subjects commented on by others.

>Let's hear it for the responsible 4-year-olds who can legally
>operate a transmitter!

Do you KNOW the 4 year olds in question?

And there is a whole decade of development between 4 and your proposed age limit of 14.

>Let's hear it for the VEs who passed 4-year-olds' written test elements!

Are you saying they broke the rules? That's serious stuff. Where is your evidence? Are YOU a VE?

> 4-year-olds can read with full comprehension of the the text material!

Full comprehension is not required to pass the tests.

Your reading comprehension is certainly not "full" ;-)

The FCC issued the licenses and has no problem with the licensees. You have provided NO evidence of problems caused by licensing young children.

Sounds like you are saying YOU didn't do it, and you don't want others to do it, either.
>

That is what I meant. I would not however agree that I intended to put more
into
the full written than what would be required by today's General. I feel that
if you
are qualified to operate on one segment of a band, you should be qualified
to operate
on the "whole" band.

>get rid of the Q&A pools, require demonstration of simple skills, a
>performance
>or hands-on test, if you will, perhaps drawing a schematic, etc.

This is a real problem from a practical standpoint. First, the FCC has been
using only multiple-choice Q&A for about 40 years. They will need to be

convinced that there is some sort of problem with that method of testing.

Public Q&A pools are a necessity of the VEC system. The FCC doesn't want the job of testing and they also don't want the job of making up the Q&A. The current system is 18 years old and it will be a tough go to convince them to go back to an old system.

If we try to make them secret again, another Dick Bash will very probably make them public again.

>Once the code requirement were eliminated(which it will be)..then the taking
>of the "full" written will be all that is required.
>A "basic" licensee would then be required to do nothing but pass a "full"
>written test.

Some folks would say that such a system would still be an incentive system. They want just one test and one license.

>> Second problem is that about 220,000 Generals and Advanceds would get
>> free upgrades to "Full", which would not sit well with some of those
>> who had passed tests to get full privileges.
>>
>It's quite likely that sometime in the future the Advanced license will be
>abolished and
>they will be grandfathered in as Extras. Yep, some will complain.
>As to the Generals getting free upgrades, you just can't please everyone.

We'll see what the FCC does. The ARRL and others proposed grandfathering all existing Novices and Tech Pluses to General as part of the recent restructuring, but the FCC did not go for it.
>
>What I have explained here is the way it works in MOST countries today. It
>works
>for them, it should work for us.

Most countries do not have large ham populations as a percentage of the total population. And many countries do indeed have classes of license. Look at Japan - four classes of license. Great Britain has five classes.

>>

Ah, OK, Bob. Thanks for checking my post.

This means you would lower the requirements for all privileges to the
equivalent of today's General. That's what the FCC did in late 1952.

>I feel that
>if you
>are qualified to operate on one segment of a band, you should be qualified
>to operate
>on the "whole" band.
>
OK - fine. But by the same logic, if you are qualified to operate on one band,
why not on all of them? If a ham has the technical and regulatory smarts to run
full power using any legal mode on 2 meters, why is that ham not qualified to
do the same on 20 meters?

I don't recall if I mentioned it before, but you may enjoy reading "The Past 50 Years of Amateur Radio Licensing" which was posted here back in 1999. Just surf over to:

http://www.deja.com

and search on " Past 50 Years Amateur Radio Licensing N2EY"

and it should pop right up. It's in four parts.

5360. How big is the amateur radio industry?

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-05 15:31:06 UTC

Some questions:

1. How much money in revenues and profits does the amateur radio industry earn each year in the United States and around the world?
2. How much in revenues and profits do Yaesu, Icom, and Kenwood earn from amateur radio?
3. How many Yaesu FT-100s and Icom 706s sell each year?
4. What are the sales and profit figures for MFJ Enterprises?
5. What are the sales figures for the most popular MFJ products like the MFJ-259B antenna analyzer, MFJ-941E tuner, and MFJ-949E tuner?
6. What are the sales figures for the most popular antennas (G5RVs, Hamsticks, Hustlers, Screwdrivers, etc.)?

Is there any web page where I can find sales figures on amateur radio companies and products?

Actually, Dick and I are going to be taking turns driving the bus, and will be providing continuous lectures on the benefits and advantages of CW throughout the course of the trip. The bus will be equipped with an HF transceiver, a "screwdriver" antenna, a Bencher keyer wired in parallel with a J-38, but no microphone! All 2-meter rigs, CB rigs, cell phones, PDA's, and other such communication devices will be confiscated prior to boarding. If the bus encounters any kind of emergency situation on the road, all radio communications will be strictly in CW.

Jason Hsu writes:

>Is there any web page where I can find sales figures on amateur radio
>companies and products?

Probably not. Outside of the "big three", most amateur radio equipment vendors like MFJ, High Sierra, etc., are small privately held companies so are not likely to publicly report their revenues and earnings.

In the case of the "big three", amateur radio sales are a sideline to their larger business. You might be able to find an "annual report" for Icom or Kenwood or whoever, but they probably don't report their amateur radio business as a separate item from their mainstream business lines.

> 1. How much money in revenues and profits does the amateur radio
> industry earn each year in the United States and around the world?

Since the list of vendors consists of many, many scattered small private companies, I doubt you could come up with anything more than a very rough SWAG.

In any case, the number is probably not very impressive. Taking the US for an example, there are around 650,000 licensees. Let's suppose that 50% of them are active in the hobby. That estimate says there are 325,000 US hams spending money on the hobby. Let's further guesstimate that each of these folks spends an average of $500.00 on the hobby each year. That puts yearly revenue for *all* vendors (in the US market) at a measly $16.25 million.

Two or three of your local Burger King franchises combined probably have that much yearly revenue.

With all kind wishes,

de Hans, K0HB

Well, if one test and one license would work, then I would not be opposed to
it,
but again, that is just an opinion.
It would certainly simplify things, end a lot of division and make life
easier for
the VEs?? Then we could concentrate on unity and promoting ham radio instead
of destroying it from within.

>

I must admit that I am not familiar with their licensing system. Maybe their
classes
make sense to them. Most of the squabbling I hear seems to come from US
licensees.

Operating on HF/MF requires additional/different requirements. You have to
understand propagation, international
treaties, different operating practices, etc. An earlier post you made that
said all they need do is satisfy the
HF/MF requirements hits the nail on the head.

Thanks Jim

AMATEUR RADIO NEWSLINE(tm) REPORT #1260 - OCT. 5, 2001

Amateur Radio Newsline report number 1260 with a release date of Friday, October 5th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A big week for ham radio in space as A-O 40 proves G-P-S works in space and P C Sat goes into orbit. These stories are first on Amateur Radio Newsline report number 1260 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: GPS EXPERIMENT COULD REVOLUTIONIZE SPACE TRAVEL

AMSAT reports another success with its AO 40 satellite that holds the promise of changing the way men travel into space. This, with word that that the on board Global Positioning System -- or G-P-S experiment has now undergone successful testing. Roy Neal, K6DUE, has the details:

--

ABOUT 20 YEARS AGO THE AIR FORCE PUT A RING OF SATELLITES IN ORBIT CALLED THE GLOBAL POSITIONING SYSTEM, “G-P-S”. THEY WERE DESIGNED TO SHOW WHERE IN THE WORLD YOU ARE, WITH PINPOINT ACCURACY. THE AIR FORCE USED THEM TO GUIDE MISSILES AND MILITARY AIRCRAFT.

THE SYSTEM WAS MADE AVAILABLE FOR PUBLIC USE A FEW YEARS LATER AND HAS BECAME A MAINSTAY FOR NAVIGATING AIRLINERS, SHIPS AT SEA, TRUCKS AND CARS ON THE HIGHWAYS AND EVEN HIKERS . NASA WANTED TO KNOW IF GPS ALSO COULD BE USED TO PROVIDE POSITIONAL DATA OUTSIDE ITS RING OF SATELLITES. THE SPACE AGENCY TURNED TO AMATEUR RADIO’S AMSAT CORPORATION TO HELP WITH AN EXPERIMENT.

NASA PROVIDED TWO G-P-S RECEIVERS WHICH WERE INSTALLED ON THE A0-40 SATELLITE. THE “A” RECEIVER TO TUNE IN AT APOGEE, THE HIGHEST POINT IN ORBIT., THE “B” RECEIVER WOULD LISTEN AT PERIGEE, THE LOW POINT.

JIM WHITE, WD0E, THE AMSAT COORDINATOR AND CHIEF OPERATOR, HAS JUST MADE HIS FIRST REPORT ON THE ACTIVITY. HE SAID ”WE RECEIVED A SIGNAL FROM ABOUT 52 THOUSAND KILOMETERS OUT WITH GOOD SIGNAL LEVELS. FURTHER DATE IS BEING GATHERED AND THOSE DOWNLOADED SO FAR ARE BEING ANALYZED.”

THEY WERE DOWNLINKED THROUGH THE A0-40 S-BAND TRANSMITTER. AMSAT VICE PRESIDENT FRANK BAUER, KA3HDO, WHO WAS INSTRUMENTAL IN SETTING UP THE EXPERIMENT, SAID IT WILL REVOLUTIONIZE THE WAY GPS IS USED IN SPACE. BAUER SAID MANY FUTURE HIGH EARTH ORBITING SATELLITES WILL BE ABLE TO TAKE

ADVANTAGE OF GPS FOR AUTONOMOUS NAVIGATION AND STATIONKEEPING

FOR THE AMATEUR RADIO NEWSLINE…ROY NEAL, K6DUE.

--

The bottom line. It now looks as if a ham radio satellite may help change the way men and machines travel to and from space. (AMSAT, K6DUE)

**

HAM RADIO IN SPACE: KODIAK STAR ORBITS PCSAT

The long awaited Kodiak Star launch, carrying the P C SAT ham radio satellite into orbit is a success. According to the AMSAT News Service, the launch took place from Kodiak Alaska at 02:40 UTC on Sunday morning September 30th.

Initial Information indicates that all satellites were successfully deployed, and that the amateur radio satellites have been heard by hams in many countries. One of the first reports came from Derek Studholme ZL1AKJ of AMSAT-New Zealand. Derek said that stations down-under heard good telemetry signals from P C Sat's first two passes over New Zealand

The launch of the Kodiak Star had been delayed several times due to weather conditions and Solar Flares. On board the launch vehicle were the P C Sat, Sapphire and Starshine satellites. P C Sat is a Naval Academy Amateur Radio satellite. The Sapphire satellite also has Naval Academy involvement in a joint venture with Washington University. Starshine was the primary NASA payload. (AMSAT Remailer, VHF Reflector, ZL1AKJ)

**

ATTACK ON AMERICA: TWO MORE HAMS MISSING AT WTC

Amateur radio operations have now wound down but there is more sad news from what's become known as 'Ground Zero' in New York City. It now appears that two more hams may have lost their lives in the terrorist attack on the World Trade Center.

The ARRL Letter says that Rod Coppola, KA2KET, was the transmitter engineer on duty for Public Broadcasting station WNET, channel 13 at the time the attack occurred. Coppola is 46 and lives in New York City.

Also missing is Winston Grant, KA2DRF. Grant is a computer technician with Empire Blue Cross - Blue Shield. He is 59 and lives in West Hempstead, New York. Neither man has been seen since the twin towers collapsed after being hit by hijacked jetliners on September 11th. (ARRL)

**

ATTACK ON AMERICA: FINANCIAL ASSISTANCE FOR MISSING ENGINEERS FAMILIES

In a related development, the Portland Chapter of the Society of Broadcast Engineers and the ARRL both report that a fund has been established to assist the families of broadcast engineers still missing at the collapsed World Trade

Center. Checks can be sent to the Ennes Educational Foundation Trust % The Society of Broadcast Engineers Inc, 9247 N Meridian St., Suite 305, Indianapolis, Indiana. The Zipcode is 46260. Please mark your envelope to the attention of the “Broadcast Engineer Relief Fund.” (ARRL, Portland SBE)

**

AMERICA UNDER ATTACK: INDIANA HAMS SET UP COMMS AT GROUND ZERO

Ham radio operators from Indiana were among those who made the trek to New York City to aid in rescue efforts after the September 11th terrorist attack. Their job was communications. Amateur News Weekly’s Jack Parker, W8ISH, has more:

--

Thirty-six hours after the first airplane crashed into the World Trade Center Indiana's Task Force One was standing at the ground zero. Among the 62 members of this elite Search and Rescue team were two Indianapolis amateur radio operators.

Veteran firefighter Jim Curseaden, KB9ZFF and Ed Elrod, W9PTO made the 14 hour road trip to help with disaster efforts. Both men make up the communications arm of this search and rescue team.

The moment they arrived each man began setting up a UHF communications link from the ground zero to their staging point several miles away at the Javis convention center. According to Jim Curseaden, getting UHF signals through the concrete canyon of New York City was a major challenge.

Ed Elrod said they first installed a repeater on a nearby building and directed a
Yagi antenna at the mountain of rubble. The Javis convention center posed another radio obstacle. Hand held radios could not reach the repeater.

To fix this problem, Elrod wired a up a remote base on the roof of the convention
center. This new link made it possible to communicate with the Indiana search and rescue personnel above and below the world trade center ruins. Ed Elrods most inspirational moment came during his second trip out of the devastation.

All week hundreds of people had been lining the streets, cheering and showing signs of support. When heavy rains began dousing New York the crowds disappeared...He said the contrast was amazing. The streets were nearly empty; except for one lonely figure standing in the rain. It was an elderly woman, holding a sign that read: “Thank You.”

Reporting from Indianapolis, this is Jack Parker, W8ISH

--

The hams from Indianapolis were not the only ones who traveled to New York City to help in relief efforts. We plan to profile others in future Amateur Radio Newsline reports. (ARN, W8ISH)

**

BREAK 1

This is one of many voices from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Arkansas Radio Emergency Services Net serving Little Rock Arkansas.

(5 sec pause here)

**

ATTACK ON AMERICA: DOD WILL NOT GIVE UP ESSENTIAL SPECTRUM

In the wake of the September 11th terrorist attacks on New York City and the Pentagon, the Defense Department has renewed support for its view that it shouldn't give up its spectrum to make room for consumer wireless products. Congressional auditors say that the proposed changes now could pose a further threat to national security. Amateur Radio Newsline's Norm Seeley, KI7UP, has more

--

Supporters of the mobile communications industry still say that transfer of some current military spectrum to the private sector is essential to fill the high demand for such services as the next generation of mobile phones and wireless Internet access. But Congresses' General Accounting Office says that if the Defense Department makes room for new wireless consumer products before more research is conducted, it could endanger the nation because of potential interference with Pentagon operations.

And it goes even further. Defense Department officials say that besides creating interference, moving all defense systems out of the current spectrum would take until 2017. That, says the DoD, would cost billions of dollars to orbit new satellites and otherwise accommodate military needs.

In the meantime, the Federal Communications Commission announced on September 24th that it will expand the possible uses of the 2500 to 2690 MHz band. That spectrum is currently used for fixed wireless services. New rues may eventually include a mobile component so that the spectrum can be used for 3 G services such as high-speed Internet access or music and video downloads.

The FCC says that it had considered reallocating the 2500 to 2690 band as a primary allocation to new 3 G wireless service. Because of the outcry against taking the spectrum from schools and other incumbent users it instead voted to create a possible shared allocation instead.

The FCC says that the flexible allocation would allow some portable data applications to be offered under existing service rules and could provide flexibility for offering other new advanced fixed and mobile services in the future. But it added that it would have to explore service rules that would apply to allow mobile operations in the band in a separate future rule-making proceeding.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

A September 2002 deadline by Congress for an auction of new spectrum licenses for wireless services might be delayed because of the Pentagon's resistance to any allocation change. (Published news reports, FCC actions)

**

AMERICA UNDER ATTACK: HAM RADIO TRACKS THE RUN FOR AMERICA

They did it to show support to the firefighters, law enforcement agents and all Americans involved in the effort to rescue the victims of the recent act of terrorism. This, as Navy Ensigns Daniel Campos and Christine Fix, coordinated a relay run to carry our national flag from Virginia to New York City.

The goal was to carry the Stars and Stripes from the Pentagon to the World Trade Center. The run began on Friday September 28th and continued overnight until they arrived about 1800 UTC Saturday. Their route was tracked using the Global Positioning System capability of the United States Naval Academy’s Ham Radio club. Computer generated maps were able to show live the progress of the runners along the way. (VHF Reflector)

**

ATTACK ON AMERICA: MOROCCO CQWW CONTEST STATION CANCELS

The September 11th terrorist attack is now having an effect in the world of ham radio contesting. This, as Al Crespo, NH7A, tells the Ohio Penn DX news that his CN2AC CQ World Wide SSB Contest operation from Morocco has been canceled. Al says that he will instead operate from Maui using his NH7A callsign. (OPDX)

**

HAM RADIO HELPING HAND: IHS NEEDS OPERATORS FOR HONDURAS

International Health Services says that it needs ham radio operators to accompany medical and dental teams to villages in Honduras. According to an Internet posting by John Kirckof, KB0UUP, most of these villages I-H-S visits have no electricity or phones. Kickof says that IHS is often are the only medical care these local people will ever see:

--
In-Q: Honduras is the...
Out-Q:...each mission in February.

--

Kirckof, who is the Communications Director for I-H-S says the group will provide High Frequency gear for any operator who does not have his or her own portable rig. Both men an women are welcome to apply. Sign-up is now until about mid October. For some basic information, visit www.ihsofmn.org or contact John by e-mail to jmkkek@runestone.net. (KB0UUP, ARNewsline(tm))

**

SURVEY: CELL PHONE CURBS FAVORED WHILE DRIVING

Three out of four adults in the United States favor laws to curb the use of cellular telephones while driving. This, according to a survey released by a highway safety group. And its a survey that has some ham radio operators concerned as well. Amateur Radio Newsline's Don Wilbanks, KC5MFA filed this report:

--

The poll of 1,001 adults was carried out July 1st to the 19th by the Louis Harris organization for Advocates for Highway and Auto Safety. This is a coalition of consumer, health, safety and insurance groups who say that they are working to make U.S. roads safer. The results are almost startling.

Though nearly two out of three people surveyed report owning a cellular phone, the poll found a lopsided 76 percent backed restricting their use by drivers in motion except in emergencies. In fact, the poll found that mobile cellular phone use in vehicles topped the list of concerns that people wanted addressed. Cell phone use was closely followed by drunk driving and improving safety at intersections.

This poll and others like it are of concern to radio amateurs and operators of other mobile two-way radio gear. Currently, no federal law bars the use of cell phones while driving but several states
prohibit phones being held by hand while driving except in emergencies. Two-way radio users fear that any across the board federal ban on using a cellular phone while driving might also be
applied to other radio services as well.

Meantime, another report from the National Conference of State Legislatures says that laws suggesting bans on drivers using hand-held cell phones have now been proposed in 40 states. As previously reported, a measure in New York is recently won approval and at least a dozen municipalities have also established mobile cellular telephone bans.

For the Amateur Radio Newsline. I'm Don Wilbanks, KC5MFA, reporting from New Orleans.

--

The survey also says that all of these enacted and proposed laws appear to have widespread public support. (From media releases and published news reports)

**

SERVICES TO HAM RADIO: LOGBOOK TO THE WORLD UPDATE

Project Manager Wayne Mills, N7NG, says that access to the ARRL's proposed Logbook to the World will be for everyone. Bill Pasternak, WA6ITF, reports:

--

In a note to Pete Smith, N4ZR, and posted to the VHF reflector, Wayne Mills says that the only charge will be for usage. Mills explains that there will be a charge when utilizing a QSO record for a specific award such as the DXCC, Islands On The Air, Worked All Zones and the like.

Mills says this means that users will only pay for what he calls usable "QSL's. You will not have to pay for attempts to get a QSL as you currently do when you send them via mail -- whether direct or via a bureau. Mills believes should result in a dramatic saving as compared to tradition methods of obtaining QSLs.

Mills also notes that five years is about as far back as Logbook of the World will probably ever go. Initially says Mills, it won't go back even that far. This he says will be an attempt to manage the initial data in-rush.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

In addition to his work on Logbook to the World, Wayne Mills, N7NG, is the Membership Services Manager for the American Radio Relay League. (VHF Reflector)

ARNEWSLINE FUND REPORT: THANKING OUR AUGUST SUPPORTERS

Ladies and gentlemen, with the August listener appreciation list, here is Amateur Radio Newsline support fund administrator Andy Jarema, N6TCQ.

--
In the month of August we heard from:

Mt. Beacon ARC of Wappingers Falls, NY; Benton Bonney of Orlando; Hiram's Hams Amateur Radio Society of Miami.

A BIG thank you to Roy Blanchard, N5YHS of New Orleans; Mike King, W5PY of Slidell, LA; Daryl Stout, N5VLZ of Little Rock, AR; Robert Guidas, KB4ABF of Maynardville, TN; Radio Amateur Club of Knoxville, TN; Richard Wolf, WI8X also of Knoxville.

Monthly contributor Frank Hemko of Harrods Creek KY; Robert Majkrzak, KA8WQL and Cheryl Turner, KB8YKA of Berea, OH and Wally Willhard, W7MVK of Bountiful, UT.

From California, William Walters of San Jose; Daniel Hart, KE6UHG from Bakersfield; Robert Vitzelio, W6AEJ of Downey; our friends at the Pasadena Radio Club, W6KA and our old friend and star of last month's QST Magazine, Dave Bell, W6AQ of Hollywood.

Andy Jarema, N6TCQ. Thank you for your support.

--

More with Andy and the support fund in future newscasts. (ARNewsline Support Fund)

**

INTERNATIONAL - GUATEMALA: A BIG UHF WIN FOR HAM RADIO

A big win for ham radio in Guatemala. The Club de Radioaficionados de Guatemala says that nations spectrum regulators are returning the 430 to 440 MHz band to Amateur Radio use. Amateur Radio Newsline's Bill Burnett, KT4SB, reports from Miami.

--

It was five years ago, back in 1996, when the Guatemalan government suddenly banned hams from access that spectrum. Guatemala then auctioned those frequencies to commercial operations.

But reports out of Guatemala soon said that the reallocation was not working they way the government had envisioned. No reasons were given. Now comes word through AMSAT that these new users will be moved elsewhere and the 430 to 440 MHz band will be returned to its former use in Amateur Radio operations.

And in the hope of preventing this kind of an arbitrary reallocation from ever taking place again, the Guatemalan national Amateur Radio society says that it will ask the International Telecommunications Union to add a footnote to its table of allocations at the World Radiocommunication Conference 2003. One that will give the Amateur Radio service primary status from 430 to 440 MHz in that country.

From Miami, I'm Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

The Club de Radioaficionados de Guatemala had petitioned the Guatemalan government to reverse its decision removing ham radio operations from the 70 centimeter band. (ARRL, AMSAT, Q-News, CRG, others)

**

INTERNATIONAL: BIG VK SITE FEES WIN

Hams down-under in V-K land are also celebrating after surviving a threat. This, to their use of several key repeater sites. Q-News Graham Kemp, VK4BB, has the details from Melbourne Australia:

--

Rob VK2MT reports on APC News that local clubs were faced with annual site bills of up to $3000. A lot of "e" and snail-mail correspondence was generated plus a couple of visits to Members of Parliament, both at the State & Federal level. What became obvious after about a month, was that the "softly-softly" approach -- while still holding a big stick -- was perhaps the

way to go.

Well, just over 3 months later and the dust has settled. Illawarra have been officially informed that there will be a maximum figure of $300.00 attached to each existing Amateur Club that has equipment at a TransGrid site. Also, they won't be charged per antenna -- as was going to be the case, all existing and documented by TransGrid antennas will be part of the deal.

For Q-News Australia, Im Graham Kemp, VKBB, reporting for the Amateur Radio Newsline.

--

Clubs will have to satisfy several provisos, such as insurance, priority of commercial users and the like. Overall though it is a satisfactory outcome for amateurs and clubs, who could have faced fees ten times as much. (Q-News)

**

INTERNATIONAL - JAPAN: WRTC-2002 AT HAM FAIR 2001

According to a recent WRTC press release, Yaesu will be the principle radio equipment supplier for WRTC 2002. This as WRTC representatives Martti Lane, OH2BH and Dennis Motschenbacher, K7BV sign a major sponsoring agreement with Jun Hasegawa, president of Vertex Standard Co.Ltd. Vertex Standard manufactures the Yaesu line of ham radio gear.

Lane and Motschenbacher signed the agreement while in Japan to represent WRTC 2002 at the recent "Ham Fair" in Yokohama. While at Ham Fair they invited Tack Kumagai, JE1CKA to act as the WRTC 2002 representative in Japan. Kumagai has accepted the post. (WRTC-2002 Press Release)

**

DX

In DX, yet another successful super low frequency report across the Pacific. Jeramy Boot, G4NJH, has more:

--

Low frequency signals have crossed the Pacific for the second time. During the Autumn equinox on the 21st of September, a number of New Zealand and Australian stations sent extremely slow Morse on their 165 to 190kHz LF band. Part of the signal from ZL6QH was received by VE7SL in south-west Canada just before his dawn, fading out some three minutes after sunrise. The path length is estimated to be 11,709 kilometres.

Radiated power was estimated to be 5 watts and the antenna was a long wire at the Quartz Hill club station, which is run by the Wellington Amateur Radio Club. Reception of a complete callsign is the next challenge. The short duration of the opening means that a faster mode must be used, but this is likely to worsen an already marginal signal to noise ratio. Permission is also being sought for ZL6QH to operate in the 136kHz band
--

Because of the extremely slow speed of the contact there is no audio to share with you. In fact, reception requires a computer and a special decoding program. Our thanks to Bob Vernall, ZL2CA, for much of the information on this historic radio event. (ZL2CA, RSGB)

**

THE FINAL ITEM: BANDPLANS ARE IMPORTANT TO THE FCC - PART 2

And finally this week, we take another look at the FCC's position on voluntary bandplans in the Amateur Radio service. According to the Special Counsel for Amateur Radio Riley Hollingsworth there are two kinds of problems the FCC sees. The first is the operator who simply does not know that a specific bandplan exists:

--

"Now, in the first case, not knowing about the bandplan. Thats more understandable than you might think at first. Unless an oprator really keeps up with Amateur publications including League publications, they wont know about the bandplans."

"Now, a lot of operators have a list of frequencies on which they are authorized to operate and they keep it right at the operating desk. I'd recommend having a second sheet with that frequency list that describes the bandplan for each band. In some ways the bandplans are more complex than the frequency list, but in fact they don't really inconvenience anyone and they really do enhance Amateur Radio and make it a lot more interesting -- and make it possible to do a lot more experimenting."

--

But what about that small but vocal group of hams who simply refuse to abide by bandplans by claiming its their right not to. For these people, Hollingsworth has some words as well:

--

"That attitude is very destructive, and they just can't stand it that there just might be an area where they just should not go because of a bandplan."

"Now, they do not stop to think that QRP or PSK-31 could not exist without bandplans. The fact that they have about 3,850 other desecrate frequencies, and don't have to bother the folks in the bandplan set-aside segments -- for example on 160 meters in the CW bandplan recommended segment -- that never occurs to them."

"And of coarse if they were adhering to a bandplan and someone bothered them, they would be the first to knock on the FCC's door."

--

As Hollingsworth stated last week, these are hams who are totally focused on rights and could care less about responsibilities. They do not care about the damage that they do to Amateur Radio and do not have a clue as to how much pressure is on our frequencies from entities that would like to see them taken

away. (RAIN)

5366. Re: Extra Class - Not without experience

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-05 19:45:35 UTC
From: mike coslo <mjc5@psu.edu>
Message-ID: <3BBE0DE0.E35D7BE7@psu.edu>
Source record: 21611

As someone who is working on their upgrade to Extra right now, Maybe I can add some perspective.

First my background is that of a former electronic technician. I became involved with hamdom after re-finding my love for electronics. So I know a good bit of the material, but am a tad rough on some of the math.

The Question pool.

If a person reviews the question pool, and is of any intelligence, they will retain the needed knowledge.

Memorization is really a non-issue. It would be much more difficult to memorize the question pool letter answers than to actually learn the material. Note: i would issue a caveat in the case of some children in the case of the technician pool questions. But especially for the Extra license, memorization of the specific question, as opposed to "knowing the material" is mostly out. If you can memorize that the answer to question E5A15 is D, you can learn the material. In addition, memorizing the letter answers to several hundred questions in order to answer 50 would be certifiably stupid.

Has anyone done this? Hey, I've been around long enough to see plenty of stupidity, so it's possible.

In the end, when a large question pool is used, the pool becomes no more a "cheat sheet" than does a textbook or a reference manual. The answers are in there too!

Second, the question pool contains relevant questions. If the prospective Extra prepares for the exam, they will be worthy of the extra privileges.

I suggest that a person who believes that the test has been "dumbed down", suggest new questions to the VEC.

Now for the general difficulty of the test.

Is the test too easy?

I had much much more difficulty learning Morse Code than any other element of the tests. That of course doesn't mean much except as individual differences, as other people I know have the opposite problem. But I have sat down with the test pool, reference books and a calculator, and spent some serious time on it.

By the time I am finished, I suspect I'll have spend a couple weeks or so studying for the Extra. It's about what I would expect with my

background. Someone who came in cold would have a lot more studying to do.

I spent well over a year on the Morse code portion, including six months of multi-daily practice sessions. Drove me to distraction, but hey, I did it.

The test is just about right for the extra privileges it confers. I suggest that the critics download the question pools and go through them. Then if there are additions that would be good to make suggest them.

Then lets have some discussion about exactly why a new Extra, which I would be, would be considered an "Extra lite". With real data points, like what knowledge was discarded (with examples please) or just why the antagonism?

In article <20011005000345.02205.00000407@nso-cc.aol.com>, n2ey@aol.com (N2EY) writes:

>No prescience. Just common sense. For example, you have repeatedly called a >highly qualified emergency medical person "Nursie", which was not very >complimentary.

The term "nursie" was in the US military colloquia of the 1950s. At that time nurses were almost always female and almost always commissioned officers. That may have been male chauvinism by today's standards but it existed as a general term of affection then.

"Highly qualified?!?" :-)

Here's an example of what this "highly qulified emergency medical person wrote on 4 October 2001:

" Guess Mrs. Brokeslob is rationing the good times in Minnesota again, and WE are going to have to suffer HIS rath....."

Tsk, tsk, tsk, a "highly qualified" person who can't spell "wrath." :-)

N2EY doesn't think this "highly qualified emergency medical person" is uncomplimentary?!? :-)

Or perhaps is really complementary since it fills out the remainder of morseodism; i.e., the tested ability at high morse code rates carries with it the implicit ability to be sociopathic when the need arises? :-)

Does N2EY need more examples of uncomplimentary behavior from "highly qualified emergency medical persons?" :-)

5369. Pride

:-) See some of the following -

>>Or are we all on
>>some kind of "honor system" where N2EY's claim is
>>"valid" if he says so?
>>
>Why not?

Then N2EY is being the hypocrite...or having delusions of
grandeur.

A stated claim of knowledge without anything presented to
show some knowledge can be considered a "fish-story"
(colloquialism for tall tale that may range from exaggeration
to out-and-out lie).

Example: Comparing a Smith Chart to an NEC-based
antenna analysis program as if that shows knowledge of
the Smith Chart or as an example of a program (one of
many claimed) that "replaces a Smith Chart."

N2EY has been asked who his employer is and what he
does there. N2EY replies only in vague generalities on
what he does ("electrical engineering") but has not yet
named his employer. While that isn't necessary, he
should not have to require such specifics of others in order
to back up his claims...or attempt to dimish others'
statements by claiming knowledge of their work.

>>>>Is anyone "attacking" N2EY's "professional" activities?
>>>
>>>Not yet. But you will, given the chance. I've seen you do it plenty of

I can't possibly "attack" something that isn't known. :-)

>I'm smart enough to know that no matter what my qualifications and
>employment, it would not be satisfactory to you.

...that sure sounds like a claim of prescience to me... :-)

>>DESIGNING one's own equipment, including making it work,
>>is quite another story.
>
>I know - I've done it. Many times.

:-) Of course you have. Let's not let the lack of details mess
up general claims. :-)

>>I converted two ARC-5 sets to 115 VAC primary power in 1947,
>>got them working. I was 15.
>
>So? Converting ARC-5s was old hat to me by age 15.

Of course it would be "old hat." :-) When N2EY was 15 the
WW2 surplus era was already a quarter-century old and the
ham publications had many articles already published on
such conversions.

>All one had to do to the
>receivers was a little rewiring of the heaters, add a gain pot, headphone
>jack and a BFO switch, and connect to a power supply. Doesn't even require
>"assembly skills".
>
>The transmitters are a little more work, but not much.

Heh, all that is easy to claim after a quarter-century period of
published information on the subject. N2EY isn't gracious
enough to acknowledge that the 1947 time-frame knowledge
of conversion consisted of a photocopy of a schematic (extra
cost) and some word-of-mouth advice (some of it erroneous).

I look at my beginnings in radio-electronics as a personal
learning experience. It was fun. Others seem to use it as
some kind of "superiority symbol" as shown following -

>So? All that means is that you are older than me. I had more ham radio
>operating experience at age 15 than you have now. Infinitely more.

Heh. Is this all about possession of an amateur license grant?

I guess so. Professional activities seem to be a pejorative
to N2EY. See -

>>Sold both of them for a fair amount of profit (in those days and as
>>a teen-ager).
>
>Ah yes, the professional angle again. QED.

As a 15 or 16 year old?!? :-) :-) :-)

>> Built a number of other things.
>
>Uh huh. Did you DESIGN them?

Yes, two of them. :-) They would not have brought
applause to either amateurs or professionals at that time
but were done to satisfy myself. No credentials or
certificates needed to wave in the air like a banner...

>Sure - the Army sent you to radio school, and then you got to stand watches
>on equipment designed, built and installed by others. That doesn't even take
>"assembly skills". ;-)

My signal school training was on radar fundamentals and
general radio relay equipment familiarization using multi-
channel equipment that was scheduled for replacement,
scheduling interrupted by other Korean War priorities. The
assignment was to work on/with/maintain fixed station
transmitters and VHF/UHF radio relay equipment that was
NOT part of the (then) MOS 1419 curriculum.

The US Army does not "stand watches." I never saw a
watch stand in the US Army or the USAF between 1952
and 1989. Soldiers wore watches on their wrists or looked
at wall clocks in buildings if they were available.

Field radio training in the US Army of the Korean War era
did NOT include fixed-station equipment so those assigned
from field radio school had to do the same thing as us from
microwave training: Learn on the job, NOW. We did.
Morse code skills weren't needed in fixed-station work,
wasn't used.

Yes, the equipment was indeed designed and built by
commercial companies. It still is. Those companies
include General Dynamics (Fort Lauderdale Division),
Collins Radio Division of Rockwell International, and
Motorola. None of those make amateur radio equipment
now. Back a half century ago the communications
companies manufacturing for the US military included
Western Electric and Lewyt Vacuum Cleaner Co. (!)
who both made high-power transmitters.

Sorry, but "assembly skills" are indeed needed to maintain
all of them. That's covered in TMs as much today as it was
a half century ago.

>> No proof presented, no validation.
>
>There is none you would accept.

I cannot accept fish-stories as true. I cannot accept unsubstantiated
claims. No one should.

5370. Never-ending Comments on 98-143

>>>In LHA's reply comments to the FCC, he recommended that there be a MINIMUM
>>>AGE LIMIT for ALL classes of amateur radio license.
>>
>>Still do.
>
>Ageism.

Then "ageism" is behind all the other laws and regulations that
forbid certain activities by those under a stated age...such as
driving a vehicle, drinking, being able to vote to name three
examples.

>> Most young teenagers don't develop the responsibility
>>necessary to operate unattended...in my opinion.
>
>It's an opinion based on prejudice, bigotry and bias. In my opinion, ;-)
>
>>Sub-teens even less so.
>
>It's an opinion based on prejudice, bigotry and bias. In my opinion, ;-)

In that case the entire adult world (with the sole exception of
US amateur radio) has a group opinion based on prejudice,
bigotry, and bias.

>Name some amateur radio problems caused by licensed hams under the
>age of 14.
>C'mon, if they are so irresponsible, there should be plenty of problems and
>enforcement actions to report.

Responsibility or lack of responsibility due to immaturity have
been in humanity's laws for centuries.

In some regulations of the federal government of the US there is
no requirement to show ages for certain permits and licenses.

N2EY is being idiotic on the assumption that very young
licensees (as young as four years old) are responsible and
can therefore be granted a federal license.

>Why are you so stuck in the past? The code test issue is a dead duck, as I
>have said many times.

Test element 1 passing is still a regulation requirement for a
US amateur radio license grant of extra or general class.

S25.5 is still the same in the ITU-R Recommendations.

The FCC International Bureau's Informal Working Group 6
has NOT yet adopted any draft on Item 1.7 (which includes
ITU-R S25.5). IWG-6 keeps tabling that item.

The code test issue is NOT a "dead duck" except to those
who have long since passed such a test. They have no
worry about ever having to pass such a test again. They
also like to reply to code test issue remarks with the
immature attitude of "I've got mine, nyah, nyah, nyah."

>>Let's hear it for the responsible 4-year-olds who can legally
>>operate a transmitter!
>
>Do you KNOW the 4 year olds in question?

Does N2EY?

The FCC amateur radio regulations do not make special
dispensation for alleged child-geniuses. While the FCC
regulations stress responsibility, there are rather explicit
examples (expecially in rec.radio.amateur.misc) of legal,
licensed radio amateurs who are quite immature,
irresponsible, and cannot play well with others both on-
the-air and off.

The FCC Enforcement Bureau notices have many
examples of violations of the radio regulations...but the
ages of such violators are not given nor is age information
given in the amateur radio license database.

>And there is a whole decade of development between 4 and your proposed age
>limit of 14.

Irrelevant. What is at question is the responsibility of
children in operating transmitters that can reach across
the entire world, transmitters that may be the cause of
interference to public safety services.

While all the long-timers are reciting their coming-of-age
in radio as teeners and spreading the myths of glory-
through-saving-mankind (etc.), they seem quite silent on
their own teen behavior. Were they all perfect in
responsibility? Of course they were according to all the
claims!

>>Let's hear it for the VEs who passed 4-year-olds' written test elements!
>

>Are you saying they broke the rules? That's serious stuff. Where is your
>evidence? Are YOU a VE?

Do I have some charges that would stand up in a court of law?

No. I've seen the story in the ARRL letter along with a cute
picture of two four-year-olds along with one of their examiners.

I have a long experience in observing children, their behavior,
their ability to be responsible...plus input from teachers along
with advice from my wife (who has two Masters degrees from
the University of Illinois, one in Education, and has been a
high school history teacher plus teaching kindergarten and
pre-schoolers).

I've been long exposed to parents whose children are supposed
geniuses, can never do anything wrong, are always responsible
even when they've been caught red-handed in some act of
irresponsibility.

Let's just say that I have a lot of skepticsm on the complete
honesty of the Volunteer Examiners who passed those two
children.

>> 4-year-olds can read with full comprehension of the the text material!
>
>Full comprehension is not required to pass the tests.

Approximately 70 percent passing is required for passing
the US amateur radio examination written test elements.

Is N2EY saying that four-year-olds all have such precocious
genius-style reading ability? Only part of all the four-year-olds?
Or are they able to read and understand the questions because
of some metaphysical aura surrounds anything about amateur
radio?

Is N2EY saying that all VEs are honest and true, never make
a mistake, are never influenced by any parent of an examinee?

I don't think so.

>Your reading comprehension is certainly not "full" ;-)

>Yes, it is. You just don't want to discuss it because you know I have the
>facts.

Discussion is difficult with those such as N2EY who are
demonstrated purveyors of unsubstantiated claims.

>>The FCC will determine what is meaningful for
>>their regulatory task...but the FCC does listen to its
>>citizens...ALL of them.
>
>Good thing they didn't listen to you.

N2EY does not know this.

Up to the January 15, 1999, NPRM Comment cut-off date,
nearly 2000 documents had been received on 98-143.
All who responded on or before the cut-off date were listed
in an appendix to Report and Order 99-412.

Whether or not anyone was "listened to" is immaterial to any
discussion. What matters is that citizens are able to
communicate with their government, to make their views
under the guarantee of the First Amendment. I was able to
do this and complied with the requested number of copies
and a disk. There is NO guarantee that anyone's comments
are accepted or rejected, are read or not read.

>Yep. I claim to have mastered both the Smith Chart and Morse code. Not to be
>"a master of the Smith Chart".
>
>>He has not provided any verification of that claim.
>
>So?

N2EY's "signature" line says he has mastered the Smith Chart
and morse code. He does not clarify use of the past tense by
the word "has."

Is this "mastership" still present? On both topics or just one?

True mastership is evidenciary by demonstration of knowledge.

Such mastership is NOT demonstrated by fish-story claims.

>>N2EY has not provided a single name-callsign of a single one
>>of the "thousands" of hams who had mastered the Smith
>>Chart and "vowed never to use it again."
>>
>Why should I do that?

To avoid being tagged as a fish-story braggart.

If there are "thousands" of such hams, then it should be a
trivial task to mention just one name. N2EY has not
supplied that information.

>>N2EY has not provided a single program name or source
>>of the "modern simulation programs" that "eliminate the
>>need to use a Smith Chart."
>
>How about EZNEC?

Bad, bad analogy! Roy Lewallen is author of EZNEC which
is based on the "NEC" or Numerical Electromagnetic
formulas and algorithms developed under USN funding. (the
source code is free to use, not copyrighted)

The NEC-based programs are for analysis of antenna
electromagnetic field patterns.

The NEC-based programs are NOT Smith Charts in any form.

The NEC-based programs derive the impedance/admittance
of antennas at their feed-point as part of the overall
Numerical Electromagnetic calculations and present that
data as part of the analyzed antenna characteristics.

A Smith Chart may be used with antenna analysis data to
solve problems of matching, to gain insight into broad- or
narrowband performance.

A Smith Chart does NOT show antenna electromagnetic
field characteristics.

N2EY may "reply" by saying "we know that," but attempting
the foolish analogy that he did shows only that he has NOT
demonstrated any knowledge on the subject.

>True mastership is evidenciary by demonstration of knowledge

And YOUR demonstration is...?!?!

>Such mastership is NOT demonstrated by fish-story claims.

Jim has done nothing of the kind. Where do you GET such tripe?

>To avoid being tagged as a fish-story braggart.

Like YOU, Oh Licenseless One...?!?!

Trying to redirect everyone away from YOUR misconduct is really pretty foolish. We now see your misdeeds obfuscated by your cheap shots at Jim.

Jimis all the things you REALLY hate about Amateur Radio. He's respected (something YOU will never enjoy), accomplished AND knowlegeable.

>N2EY has not
>supplied that information.

As opposed to all the information YOU have yet to supply...?!? Puh-leeze!

>N2EY may "reply" by saying "we know that," but attempting
>the foolish analogy that he did shows only that he has NOT
>demonstrated any knowledge on the subject.

As opposed to all the knowledge you have YET to show, I think any error Jim might make (which he has yet to do, as far as I can tell, other than to treat you with more civility than you have he....) is pretty miniscule.

Guess Hansie isn't the only Geezer being deprived of matrimonial priviledges these days......

>The code test issue is NOT a "dead duck" except to those
>who have long since passed such a test.

Yes, it is. However you like to keep flogging it...I imagine it's not all
you flog these days...However it's all you ahve to live for, I guess....

>They
>also like to reply to code test issue remarks with the
>immature attitude of "I've got mine, nyah, nyah, nyah."

Please quote the author of those comments, Your Lyingness.

>The FCC amateur radio regulations do not make special
>dispensation for alleged child-geniuses.

Nor do they make dispensations for alleged electronics engineers who seek
licensure simply by saying "I wanna I wanna I wanna", such as yourself.

You won't be happy until there is NO licensure requirement. Then you
won't have to humble yourself by having had to meet the same requirements as
every other citizen in the United States (and many foreign countries too, I
might add....)

>While the FCC
>regulations stress responsibility, there are rather explicit
>examples (expecially in rec.radio.amateur.misc) of legal,
>licensed radio amateurs who are quite immature,
>irresponsible, and cannot play well with others both on-
>the-air and off.

Off the air, you can quote from USENET, however that's NOT Amateur Radio,
now is it?

On the air, you have no way of knowing. You are not licensed, nor do you
participate in any organized Amateur programs or activities. Ergo your
"analogy" is not only inappropriate, but foolish to boot.

>The FCC Enforcement Bureau notices have many
>examples of violations of the radio regulations...but the
>ages of such violators are not given nor is age information
>given in the amateur radio license database.

Oh...?!?!

Damn, Lennnie...WHY do you insist on demonstrating your COMPLETE ignorance of Amateur Radio..?!?! ESPECIALLY a "database" that anyone with a Commodore 64 could access...?!?!

>Irrelevant. What is at question is the responsibility of
>children in operating transmitters that can reach across
>the entire world, transmitters that may be the cause of
>interference to public safety services.

What's irrelevant is your suggestion that a 14 year old cannot operate that radio appropriately.

They can. They do. YOU can't. You don't have a license.

>.... they seem quite silent on
>their own teen behavior. Were they all perfect in
>responsibility?

Are we still licensed? Can you find any reference to any FCC NAL's, warning letters, etc involving ANY of us in this forum...???

>Of course they were according to all the
>claims!

Quotes, please.

>I have a long experience in observing children,...(SNIP)

No, Lennnie, you have a long history of ACTING like a child.

Evidence Google.

>Let's just say that I have a lot of skepticsm on the complete
>honesty of the Volunteer Examiners who passed those two
>children.

>Whether or not anyone was "listened to" is immaterial to any
>discussion.

Especially where you are involved.

>...plus input from teachers along
>with advice from my wife (who has two Masters degrees from
>the University of Illinois, one in Education, and has been a
>high school history teacher plus teaching kindergarten and
>pre-schoolers).

And what of the kids YOU raised, Lennie? How many are Nobel laureates? Had an audience with the Pope? Been recognised in any secondary education honor's program? Have an Amateur license?

Too bad your Wifey wasted that education, Lennie...She obviously was never able to teach YOU anything...

>I have a long experience in observing children, their behavior,
>their ability to be responsible..

Me too....Like watching my seven year old help her father do CPR on her sister. Watching that now 9 year old master Morse Code and the Technician Class Amateur Class examination material...Like watching the 22 cadets in my CAP unit master communications, navigation, extrication and first aid skills normally associated with "professional" rescue squads. Like the Explorer Scouts who work "OJT" with law enforcement, health care and the business sector....

Yeah...real irresponsible kids out there...Guess they all shoulda been drafted into the 1950's Army and sent overseas to work on KW RTTY nets...THAT would have taught them some responsibility!

Oooops..almost forgot...My CAP cadets can operate HF and VHF radio stations, too...something YOU can't do at the moment, Lennie.

>I've been long exposed to parents whose children are supposed
>geniuses, can never do anything wrong, are always responsible
>even when they've been caught red-handed in some act of
>irresponsibility.

And YOU, of course, were without sin....

Lennie, you get MORE foolish by the post!

Hans, my guess is that you may well be close. When I got into amateur radio (1962), there were a number of amateur radio manufacturers (and a number of local retailers). Yes, Heathkit, Collins, Hallicrafters, Hammerlund ... it might be a nice trip down memory lane for some people to add to that short list. There were DSB transmitters (low end - no carrier, but both sidebands) ... That seemed to have ended in the late 60s and early 70s. Now there are a few retailers (none local to most folk - well, Radio Shack, I suppose, but none other than that). It is probably a real tough business to try and break into for starting a retail business since the pie is pretty small and there are a few big players you probably couldn't touch as far as price. I have heard rumors of markups as small as 3 to 5%, but cannot verify that. Once you take a couple of percent out of that for the credit card, it doesn't leave much left. I remember one store opened here in Rochester, NY, back in the late 70s. They didn't last two years.

It is very clear that those alliances with the West, as well as those
currently being formed, are shakey and tentative at best, giventhat
large portions of the populace of the Arab countries sympatiize with
Binb Laden & co. The Saudies and Kuwaitis had little choice but to ally
with us, or face our common enemy alone. And their need for help in
protecting their turf extends to today. But there are many commoners in
most Moslem countries who would gleefully take out the current rulers,
and giv it all to the Jihad against the West.

> What about Muslim Iraq's long war with Muslim Iran?

No news there. More strife and infighting within the ranks of the
Faithful. They would gladly team up against us when circumstnces change
to make that a more attractive option.

So if a few terrorist leaders surrender, this is all over?? I don't
think so, in fact I'm sure of it.

Of course
> I don't think they will just give up.
>

THose who are so well indoctrinated as to make themselves instruments
of death, and who are eager to die themselves for their cause do not
give up. The Kamikazis of Japan showed that, as have many more recent
models.

> What I'm trying to say is that Bush & Co. have not gone off and simply

Yes, and I as well as most others applaud their use of intelligence and
restraint as opposed tothe previous administration who concluded that
the proepr response to terrorist bombing was to lob a dozen ccruse
missiles into the empty desert and get on with business as usual. Such
an attidtde results in Sept 11.

> The Taliban and others can cooperate with that goal or face
> the consequences - but it's THEIR choice.

Actually, they don't have a choice under their own doctrine.

And which we have NOT had in anything near adequate quantities for many
years.
And you don't quickly correct for decades of ambivalance, especially
when there are so many who still don't seem to understand what this is
all about. Our very survival is at stake, at least our survival as a
free people. And perhaps seven as a national entity. It doesn't always
take a bigger, better equipped army to win a war, you know.

There are all sorts of numbers out there, but they run much much higher
than that. Today one ranking officer said there have been upwards of
10,000 terrorists trained by the terrorist training camps in Afghanistan
and other places that we know of. How many of they have emgrated to the
USA over the years we can only speculate. Our leaky borders have
allowed thousands of persons of every stripe in without any effective
resistance for decades. We do know that many who ARE here enjoy
community support within enclaves of Islamic immigrants here. That is
certainly not to say that all Islamics are terrorist supporters, but
there are enough to keep the network alive and very viable, and laying
their patient plans......

The danger is that they will appear to 'agree' while merely buying
time for their elements still hidden underground. Then we impatient
Americans can go on with business as usual, thinking the problem has
been solved, while it is not.

>
> Remember Pearl Harbor - and remember how that story ended.

I do, and I'm sure that the terrorist enemy does, too. One can only
wonder if they will learn the right lessons from it, and whether or not
we did, or will. With little more effort the Japanese could have made
that attack far more damaging than it turned out to be. Just a little
better preplanning. Lessons learned by whom?????

Every time I go by 3915 West Broadway in Council Bluffs IA (across the
Misery from Omaha) I see not the present tenant (the Salvation Army) but
World Radio Labs, home of the Globe King, Globe Scout, Globe Chief and, yes,
several DSB and controlled-carrier AM rigs.

Leo Myerson W&#65533;GFQ made his bux selling crystals to Sam during WW2 and is BTW
still with us -- a fixture at the QCWA I am told. He was licensed when Iowa
was nine-land.

We all "hear" the same damned media stories, Dick. The translation comes from which color glasses we wear when we listen. Rose colored or other. Then a little bit of the "is the glass half full or half empty" and you've got all the news that's fit to translate.

You run along and have fun being so, well...I guess I'd say paranoid. Ta ta.

>electromagnetic field patterns.
>
We KNOW, Len. Various versions have been around for years. The Windows version (EZNEC2000) is pretty slick.

>The NEC-based programs are NOT Smith Charts in any form.

We know that, too.

The challenge was to come up with a modern simulation program that eliminates the need to use a Smith Chart. If EZNEC was simply a form of Smith Chart, it would not meet that challenge. So EZNEC is a GOOD example of a modern simulation program that eliminates the need to use a Smith Chart.

(Actually, EZNEC2000 includes a choice of Smith Chart options, but the user doesn't have to use tha feature to design antenna/transmission line systems).
>
>The NEC-based programs derive the impedance/admittance

And your point is?

>N2EY may "reply" by saying "we know that," but attempting
>the foolish analogy that he did shows only that he has NOT
>demonstrated any knowledge on the subject.

Oh dear - you really do need to get out more, Len. Visit some other newsgroups and websites. Catch up on what others are doing, and have done, in this field. ;-)

EZNEC2000 is more than antenna pattern simulation software. Yes, the user can define antennas as collections of "wires" and determine the radiation patterns

and feedpoint impedance.

The user can also define sources, loads and lumped components such as loading coils and traps. The effect of "real ground" and other losses can be included.

And the user can define TRANSMISSION LINES (note the plural) as part of the simulation. The matching effect of such lines can be observed over a wide range of frequencies. By suitable choice of line characteristics (velocity factor, length, impedance) a matching system can be designed using the EZNEC2000 software instead of a Smith Chart.

For example, the popular "G5RV" antenna, or a variant of it, can be modeled using EZNEC2000, and its radiation pattern, feedpoint impedance, and SWR determined. Many other antenna/transmission line systems can be designed in a similar fashion.

Or take W5DXP's ingenious idea of matching an HF dipole on different amateur frequencies by switching in various lengths of feedline, so that the end result is transformation to 50 ohms without a lumped-constant matching network.

If a ham wants to use a different dipole length than W5DXP used, a redesign is necessary. This can be done by Smith Chart methods, but with EZNEC2000 it can be done easily with no Smith Chart knowledge at all.

The challenge was to come up with a modern simulation program that eliminates the need to use a Smith Chart. EZNEC2000 is one example.

QED

I have nothing against using the Smith Chart or simulation software. One more tool in the toolbox is always welcome.

N2EY

But, from the company's perspective, you would have to look at the global market and at radio in general (not just ham radio). Almost all major manufacturers design their radio equipment for a global market and make minor modifications for localization. For that matter, many design their products for more than one radio service (government, business, research, and so forth - not just ham radio) and again make minor modifications to make the product compatible with a specific radio service. Therefore, it would be very difficult to come up with real figures about ham radio alone. I'm sure the companies have internal reports, but I suspect those numbers rarely ever make it into a public report.

But I do agree that ham radio alone is a small market. However, it is a good sized "additional" market for companies who built radio equipment. Furthermore, since the demands on ham radio equipment is so high (wide bandwidth, multiple modes, etc), it is a good target market to use when designing a radio. In other words, if a radio can be useful for ham radio, that radio would be also useful for a wide range of other markets (with limits added per radio service).

There is a huge difference between the words written by individuals in this newsgroup and the literary works of outside "experts" cited as proof of a claim. Words written by individuals in this newsgroup can be believed or ignored, based solely on the argument presented here. But it is not at all unreasonable to question the credentials of an outside "expert."

As for N2EY's employer, I don't blame him for not giving more details in this newsgroup. As far as I know, his employer has nothing to do with this newsgroup and would therefore not likely appreciate being dragged into this newsgroup. Or, perhaps like those I've worked for in the past, his employer who would rather maintain a relatively low profile. Whatever the case, information about his employer is not required - he is here himself to argue in defense of any claims he has made.

You're just playing with words there, Len. Soldiers assigned to fixed radio facilities, or mechanized radio facilities, do indeed work at their jobs in shifts (commonly called "standing watch"). While that phrase ("standing watch") is not commonplace in the Army, it is used occasionally and most are well aware of it's meaning.

Yeah, and Dick's the typical taxpayer. The "paperwork generating job with
the gov'ment" person didn't say what Dick wanted to hear. :o

And, in what way is my choice to suspend travel and walking in underground
tunnels going to cause a delay in "my dreams," Dick? It comes straight from
the United States Government and the military as recommendations that we all
"make adjustments" to our lives right now and be a little more on guard and

cautious about our activities.

You seem to have completely missed that my only question to your comments was your apparent belief that we should use a broad paintbrush in determining who "we" should be suspicious of. You seem to believe it is every human being who is a card-carrying visitor to this nation and even those who have immigrated legally and become US Citizens. I happen to believe everyone, no matter what race or nationality or whether they are US Citizens, is due an objective nod until they happen to prove otherwise. Once again, even our Government and Military have publicly admonished this kind of reaction to others. So, what exactly is your problem with--and please remember this important small detail--*MY* choice of how I react to this tragedy? I have no problem with how you react to it--other than my wish to help you understand that I don't think you need to be so suspicious of everyone who doesn't look and think just like you do; and I don't there's many that share your surprise that something like this has happened.

I am not a member of the US Military so don't find it compelling to feel as prepared as you think you are to "go into battle." Nor do I wish to go into battle with anyone. I leave those decisions to our military leaders and personnel. Once again, I ask what kind of problem you have with that.

In what way do you feel I am "lost," Dick? I think this administration is doing a fine job of responding to this tragedy and I have no problem with the concept (though I doubt this will happen) that no military response may be required. I don't see how any administration would have responded any differently to something like this. I choose not to make this a "political game" as you seem to desire. I don't like playing those "us against them" kind of games. I think every one of us was affected by this; and I think there are many who are going way overboard with the paranoia of "there's an enemy around every corner."

If the measures being taken succeed in the behavioral change of terrorists to cease violent acts upon others then I am absolutely fine with them "hanging around." I am absolutely fine with that, as long as the policies of attrition are set in place and carried out on a continual basis and as long as there are no changes to civil liberties and freedoms we are accustomed to in this country.

I don't mind taking several hours to get through an airport line to get on a plane; I don't mind being scanned before I go into a stadium for a game; I don't mind making personal choices to refrain from certain activities; I don't mind having cameras on me in malls, the highways, etc. What I do mind is someone listening in on my phone conversations, scanning my email, etc. In other words, if I make the personal choice to be out in public, then I am handshaking with whatever "things" there are about being out in public that I have to contend with. My willingness stops at personal and private matters that NO ONE has the right to see or know about. And, those personal liberties certainly should not be given up without someone FIRST defining the rules.

You (and many, many others here and in every town across America) seem to be off on some tangent about who is more patriotic, who is more willing to make sacrifices, who is..., who is..., who is... If I am wrong, all you have to do is say so. But, if my understanding is correct, all I was doing was offering up an opposition to that way of thinking. I don't think I ever called into question anything about your politics, your rights, your dedication, your patriotism. Yet, you seem to have done all that with me. And, not just with me but with others who don't think just like you. Again, if I am wrong, I apologize. But, somehow I don't think I am.

How so?

LHA is obssesing over something that has nothing to do with the discussion, as a diversion from the subject being discussed.
>
>A stated claim of knowledge without anything presented to
>show some knowledge can be considered a "fish-story"
>(colloquialism for tall tale that may range from exaggeration

In other words, you are skeptical about my claim of Smith Chart knowledge. But rather than discuss that knowledge, you digress into other areas.

It is interesting that you have not mentioned my academic achivements after I pointed you to them.

Just surf over to

http://www.deja.com

and search on "N2EY MSEE BSEE"

and see what pops up. Then tell me about not presenting any knowledge.
>
>Example: Comparing a Smith Chart to an NEC-based

>antenna analysis program as if that shows knowledge of
>the Smith Chart or as an example of a program (one of

As shown in another post, EZNEC2000 allows the user to define TRANSMISSION LINES as part of a simulation. Thus, the user can simulate and design complete antenna/transmisssion line systems using one software package without any Smith Chart knowledge at all.

What has been demonstrated is that LHA is not familiar with EZNEC2000.
>

>such conversions.

I was 15 in 1969. WW2 surplus was not available until 1946. A quarter century
is 25 years. You do the math.

It was old hat to me because I'd already done it several times before the age
of 15.

All I had was "Understanding Amateur Radio" and a tube manual.

> N2EY isn't gracious
>enough to acknowledge that the 1947 time-frame knowledge
>of conversion consisted of a photocopy of a schematic (extra
>cost) and some word-of-mouth advice (some of it erroneous).

There were conversion articles as early as 1946. And with a schematic, the
conversion is obvious. I didn't have a schematic until I traced out a BC-453,
wire by wire.

>I look at my beginnings in radio-electronics as a personal
>learning experience. It was fun.

Same here. It led me to a career in electrical engineering.

>Others seem to use it as
>some kind of "superiority symbol" as shown following -
>
>>So? All that means is that you are older than me. I had more ham radio
>>operating experience at age 15 than you have now. Infinitely more.

Is stating the truth somehow not allowed if it shows that someone has more
experience or knowledge about something than LHA?

>Heh. Is this all about possession of an amateur license grant?

The only way to get ham radio operating experience is to operate an amateur
radio station, which requires a license.
>
>I guess so. Professional activities seem to be a pejorative

That's almost funny.
>

>Field radio training in the US Army of the Korean War era
>did NOT include fixed-station equipment so those assigned
>from field radio school had to do the same thing as us from
>microwave training: Learn on the job, NOW. We did.

Learn to keep it on the air after others designed, built, and installed it.
With manuals, tools, test equipment, more experienced staff, etc., etc. All on
the taxpayer's nickel.

>Morse code skills weren't needed in fixed-station work,
>wasn't used.

Nobody asked about that, but you see the need to include it.
>
>Yes, the equipment was indeed designed and built by
>commercial companies. It still is.

That's nice ;-)

>Those companies
>include General Dynamics (Fort Lauderdale Division),
>Collins Radio Division of Rockwell International, and
>Motorola. None of those make amateur radio equipment
>now. Back a half century ago the communications
>companies manufacturing for the US military included
>Western Electric and Lewyt Vacuum Cleaner Co. (!)
>who both made high-power transmitters.

And the significance of this is?
>
>Sorry, but "assembly skills" are indeed needed to maintain
>all of them. That's covered in TMs as much today as it was
>a half century ago.

You didn't build them, you just fixed them.

You got "proof" or "validation" of any of the above? ;-)
>
>>> No proof presented, no validation.
>>
>>There is none you would accept.
>
>I cannot accept fish-stories as true.

You don't even accept the truth as true, when it is told by someone you oppose.

>I cannot accept unsubstantiated
>claims. No one should.
>
I gave you the pointer but you won'y use it.

In fact, you won't even sign your posts. I wonder why.

N2EY

A "Did you know" comes to mind- Did you know that of the 58 countries
in the world which are Islamic, only *one* (Turkey) has even a partial
Democracy as a government principal? The rest are dictated by various
thugs and pseudo-thugs masquerading as Islamic Clergy. If that doesn't
tell you anything, well, I guess I wouldn't be too surprised.

I happen to
> believe everyone, no matter what race or nationality or whether they are US
> Citizens, is due an objective nod until they happen to prove otherwise.

And how would they do that? A car bomb, perhaps? No one even remotely
suggested that all Arabic people are radical terrorists. I hope,
however, that you can see that their heritage certainly leans in the
direction of totalitarianism in religious beliefs, and fealty toward the
mandates of their clergy, whoever they are and whatever they say. If
some Mullah in the middle east (or in New York for that matter, in the
case of the first WTC bombing in '93) says do it, a certain percentage
of them will be moved to do so. Yes, that includes those living here in
relative peace. If you can't grasp that, well, you can't

> Once again, even our Government and Military have publicly admonished this
> kind of reaction to others.

Read it again, please. What they said is what I said. Draw no
unwarranted conclusions as to any individual. BUT- keep your eyes open.
And report unusual or suspicious occurances. Especially those involving
persons who might be Islamic fundamentalist terrorists. That means
individuals of Arabic extraction. Is that Profiling? what else? You
didn't see WASP's involved in the proceedings on Sept 11, did you?>

So, what exactly is your problem with--and
> please remember this important small detail--*MY* choice of how I react to
> this tragedy?

The simple fact that you can't see this "tragedy" for what it is- the
opening salvo of a war on *all of us* by Islamic fundamentalist
terrorists who wish us ALL dead, and many of whom are willing to forfeit
themselves to that end.

>
> I am not a member of the US Military so don't find it compelling to feel as

To paraphrase what I have said so often in the Mode Wars, "You don't always get to choose the time, circumstances, nor mode" You don't choose what your exposure to the terrorists is, either, unless you stay home with doors locked and windows shuttered.....So do your peacenik thing, and hope for the best. I would hazard the guess that there are terrorists well within your own region who have plans for some facility nearby.That isn't just a wild guess, either, rather the distillation of lots of official prognostications ingested by me since Sept 11. If you missed it, one plane with several of the terrorists was grounded in StLouis just after the WTC incidents on Sept 11. They had boxcutters and knives, and a destination of Dallas-FT Worth International. The US Govt beleives they had a target in that area fixed firmly in mind, but the quick US shutdown of air traffic headed it off...for now.
Officials these days say that the likelihood of further terrorist activity within the US in the near term is 100%.
Rest well, Kim.

Oh-If you depend on ABC for all your news, no wonder you'r so porrly informed. You gotta do better than that.

> Some questions:
>
> 1. How much money in revenues and profits does the amateur radio
> industry earn each year in the United States and around the world?

This would be nice to know but it would never mean much as regards to
the developmental costs of modern communications equipment that is
performed by Japanese engineering.
Amateur Radio equipment is but a small byproduct of commercial,
government, and military communications equipment.

> 2. How much in revenues and profits do Yaesu, Icom, and Kenwood earn
> from amateur radio?

Add to that similar equipment sold to police, maritime users, short
wave listeners, coast guard, trucking and rail-road monitors, taxi
services and on and on..?
All are developed in sync with similar technology, similar methods,
similar components....and the same engineering.

> 3. How many Yaesu FT-100s and Icom 706s sell each year?

Personnally I (w2ilp) could care less...because whatever is sold may
be dumped at cost in the USA for all that it matters. The reality is
that Ham Radio gear is but a test bed for the development of similar
gear whose sales are much more profitable. Ham gear only helps the
manufacturers to increase their mass production slightly....The big
bucks come from commercial, government, and military users.

> 4. What are the sales and profit figures for MFJ Enterprises?

Probably just enough to keep them in business. I dunno for sure.

> 5. What are the sales figures for the most popular MFJ products like
> the MFJ-259B antenna analyzer, MFJ-941E tuner, and MFJ-949E tuner?
> 6. What are the sales figures for the most popular antennas (G5RVs,
> Hamsticks, Hustlers, Screwdrivers, etc.)?

Again I can't believe that any company can survive for very long on
Ham Radio sales unless they also sell other products. Mosley, for
example, could not have survived as long as they have without selling
commercial antennas and getting government contracts. Sure there have
always been small outfits that start on a kitchen table as little more
than a hobby...or as we say "a labor of love".
If Heathkit could not survive after taking a market survey...How can

we expect any large company in the USA to get involved with Ham Radio sales? Collins-Rockwell realized that the market for high end Ham Gear was too small for any expectation of reasonable profit.
Products must have a mass market in order for their prices to be reasonable. The Japanese (and now the Chinese, and Mexicans as well) have been able to mass produce modern communications equipment and components at prices that can not be beaten...but even they must be able to deliver to a relatively large world market to make any profit. Kenwood, Yaesu, and ICOM deliver to a world market. On my recent trip to Australia, I found that most Hams were using their products.

> Is there any web page where I can find sales figures on amateur radio
> companies and products?

I would suggest that you get a hold of the stock prospectuses for the companies that you are interested in. Some are on the Tokyo exchange. Some also are listed on USA exchanges. Some are divisions of larger companies, who may have bought them. You can bet that the remaining smaller unlisted ones are not very profitable. Some are just mom and pop operations.

Hams need MORE license classes and/or official FCC technical endorsements.
Hams have been able to provide a cadre of trained technicians during previous national emergencies...Now hams must again rise to the level of modern communications techniques...for if they can not, Ham Radio will continue to lose its most important basis and purpose. Hams must lean more than it takes to just operate Japanese radios.

73, Bob Wex w2ilp (Increase License Potential)

Well, you ARE wrong, at least for the most part. You seem hung up on
all this Nocode generated (within ham radio at least) junk of "better
than thou" nonsense. It simply doesn't apply, neither within ham radio
nor when facing the terrorist threats. Common sense knows no politics.
And by way of showing that, I refer you to a news interview I just now
saw on Fox News Network, where former Senator George Mitchell of Maine,
(Democrat, by the way), was asked if we face further threats from the
terrorists. He said that the Sept 11 activity was not new at all, just
on an unprecedented scale, it has been going on for years (of course we
knew that didn't we?) He further said that a reading of the terrorists
writings clearly shows that they are NOT finished by any means, whatever
we do or do not do about Sept 11.
I think that should help clear up questions on that subject, and also
forclose speculation on what they would or would not do if we do or
don't do whatever (Whew!)

Watch multiple news outlets if you want to find out what is really
happening, and you need to watch a lot of it. ABC is much too one
dimensional as NBC is.
At least Fox News covers it all, and they interview as many or more
liberals as conservatives. For some reason the liberals are eager to go
on Fox to air their viewpoint, and they are allowed to do so. Of course
the alternate views are presented, too, and audience then decides for
themselves.
It's something radically new and refreshingly different in TV news.

Lenie's great for that, Dwight. When I was in Atlanta he made a big deal
of where I was working and for whom.

Unable to defend his "position", Lennie finds other avenues to explore
that have nothing to do with "issues", yet he LOVES to accuse others of not
being able to debate those "issues"...even dead ones.

I still bet his wife sleeps with a dab of "Ben-Gay" under her nose to help
alleviate the stench at night.

If your post wasn't so accusatory, Dick, I would give it half a thought. But, you're so full of yourself being a better citizen than those who may think a little differently than you, that I'll just leave you to your superiorism.

> From my own "QRZ" info, quoted DIRECTLY from FCC records:

<snip>

Incorrect quote. The FCC database information does not contain any data fields relating to age or birthdate of the licensee. That may be verified by viewing the license database information organization files available on the FCC's Wireless Telecommunications Bureau's pages.

The current amateur radio license database is 55.4 MB in size, hardly something downloadable to a "Commodore 64" as stated in another post.

"QRZ" is a commercial entity in the business of providing a database in "callbook" format with additional information not found in the FCC database records. Their database is not obtained solely from the FCC.

>But it is not at all unreasonable to question the credentials of an
>outside "expert."

Good points, Dwight.

What causes a problem to many is the attachment of
"truth" to a general statement...as in everything one person
says is "true" when it is really only an opinion of theirs.

As an example, let's suppose someone brings up a subject
of quartz crystal oscillators and mentions some trouble with
a specific type of oscillator. A second person enters in
with some discussion about that type which includes some
more detail. A third person enters in and challenges the
second as to their expertise but does not express anything
in regards to the first person's problems. The second one
replies with a challenge to the third on their expertise. The
third one says "I've built lots of them" and offers nothing
more technical (except perhaps the ever-popular reference
to the ARRL Handbook).

Now it may be that the third person has indeed built "lots"
of them (which would be true in that case) but it is more
likely that the third person is playing a kind of message
poker and bluffing...they've probably only read of oscillators
or built one as part of a kit (and it probably worked fine).
The third person may insist and insist that what they say
is "true" but that "truth" is not apparent to any who has
had experience in building-testing-applying crystal
oscillators. It rings hollow as "truth" no matter how often
it is claimed, ever more so when there is no further
mention of any technical details of the third person's
experience.

Of course, the segue is now to all kinds of irrelevancies
that depart from the main subject. That is misdirection
and a part of the message poker being played out so

that the third person can assume the (rather false) label
of an "expert" or "leader" in the subject. Meanwhile,
oscillators don't know about "expertise" or of their
having to work as stated in some amateur publication.
They remain bound by the physics of electronic circuits
and will only work under those rules.

An amateur radio publication may indeed cover all the
technical necessities required to make an oscillator
design work correctly. That is good. However, many
other texts, papers, application notes have been done
for non-amateur applications of crystal oscillators.

The above is just an example. I could go into Smith
Chart use...and have mentioned some ways it may be
used to another regular. A reply is "we know [the
subject]" as if this is intrinsic knowledge of all radio
amateurs. It isn't and that sort of reply is just part of
the message poker game of bluff being tossed about.

> As for N2EY's employer, I don't blame him for not giving more
>details in this newsgroup. As far as I know, his employer has nothing
>to do with this newsgroup and would therefore not likely appreciate
>being dragged into this newsgroup. Or, perhaps like those I've worked
>for in the past, his employer who would rather maintain a relatively
>low profile. Whatever the case, information about his employer is not
>required - he is here himself to argue in defense of any claims he has made.

Not a direct problem to me. If he doesn't want his employer
mentioned, for whatever reason, that's okay. But, as I and
others have mentioned in the past, it is rare for an employee
to not exhibit some pride in what they do or their employer's
organization if the work includes electronics and/or radio.

On the other hand, no mention or just a generalized mention
of work experience is not any automatic guarantee of being
somehow superior in a technical subject. Long-time
association in an activity is not a guarantor of expertise in
all or even part of the scope of activities...or even partial
knowledge. That would be shown by what they say relative
to the subject...and what they say about a communicator's
person. :-)

>> The US Army does not "stand watches." I

You caught on! :-)

> Soldiers assigned to
>fixed radio facilities, or mechanized radio facilities, do indeed work
>at their jobs in shifts (commonly called "standing watch"). While that
>phrase ("standing watch") is not commonplace in the Army, it is used
>occasionally and most are well aware of it's meaning.

Yes, Dwight, to "reply" as another might do, "we know that."
:-)

At the mall yesterday I did indeed see some watch stands.
Quite a few in one store featuring wrist watches. Nice
display. :-)

I've mentioned US military radio of a half century ago that did
not use OOK CW. Some insist I am doing so to present my
curriculum vitae. It is not so presented but rather to illustrate
that long-distance HF 24/7 communications by the military
had abandoned morse code modes for that purpose a long
time ago. I was a part of that along with thousands of others,
did not implement it, just reported it.

The pride of some radio amateurs, principally the PCTAs,
makes them blind to such facts. They will argue endlessly
that their expertise on one part of amateur communications
is a vital skill needed to be preserved...even when other
radio services never considered it or have given up on it.
Their "facts" are not truths at all, just projections of their
own desires and opinions.

Put the logic where your mouth is Dick. Find me one damned post where I
have ever been involved in the debate you speak of above. The *only* time I
have ever gotten involved in the debate with CW is whether it should be used
for testing for licesning or not. Put up or shut up.

>
> It simply doesn't apply, neither within ham radio
> nor when facing the terrorist threats. Common sense knows no politics.
>

You're right. It's just that you think your common sense is better than
someone else's. My only "argument" (and I wouldn't even call it that
literally) is a disagreement with you about generalizations when it comes to
a populace of people living in this country.

>
> And by way of showing that, I refer you to a news interview I just now

> we do or do not do about Sept 11.
>

And, so where is the news in that?! For cryin' out loud, what happened in
NYC was inevitable; and it is inevitable that it will happen again.

>
> I think that should help clear up questions on that subject, and also
> forclose speculation on what they would or would not do if we do or
> don't do whatever (Whew!)
>

Where do you get that I have any question that it will happen again? It's
no surprise when it has happened before, not just in this country but all
over the world.

>
> Watch multiple news outlets if you want to find out what is really
> happening, and you need to watch a lot of it. ABC is much too one
> dimensional as NBC is.
>

And, there you go again defining where I must get my information from. I
will get my information from anywhere I damned please. And, if I choose,
I'll get NO information. That is my damned right, Dick, and it's anyone
else's right. You seem to blatantly ignore that.

>
> At least Fox News covers it all, and they interview as many or more
> liberals as conservatives.
>

As I said before, I couldn't care less about who interviews who in terms of
the politics of it all. That seems to be your personal war, not mine.

>
> For some reason the liberals are eager to go
> on Fox to air their viewpoint, and they are allowed to do so.
>

See above. The "liberal vs. conservative" war is yours, not mine.

>
> Of course
> the alternate views are presented, too, and audience then decides for
> themselves.
> It's something radically new and refreshingly different in TV news.

>

And, I'll bet anyone in that "audience who then decides for themselves" that happens to decide differently than yourself is summarily dismissed by you as some kind of moron.

Well, for eight years, the US was run by thugs posing as politicians.

They violated the laws, willy nilly, and nothing much happened.

Wrong. The FCC database DID contain birthdate information until 1997. That's
when they stopped collecting it and removed the data from their on-line
database. The FCC has announced plans to start collecting birthdates again.

5418. Has any group bucked the trend of declining hamfest attendance?

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-06 21:13:54 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0110061313.35624251@posting.google.com>
Source record: 21662

I live in northern Virginia, and I keep hearing from people that hamfest attendance has been on the decline for the last few years.

Does anyone know of a hamfest other than Dayton that has done exceptionally well in recent years? Why did the Dayton Hamvention become so wildly successful?

Why has this been the case DESPITE the increased numbers of licensees? Has ANY hamfest out there bucked the trend and managed to show increased attendance? I know that as an individual, I have bucked the trend. Of course, I'm not one of the hardcore hamfest attendees. I wasn't licensed until February 1997, I didn't start attending hamfests until last year, I don't collect boatanchors, and I'm not a big homebrewer.

My theories:
1. It seems to me that traditional hamfest attendee is a boatanchor collector or a homebrewer looking for parts. Much of the merchandise for sale includes boatanchor equipment (vaccuum tubes, radios, etc.) and electronic parts. The newer, less experienced hams (like myself) are less likely to fit these categories. Most boatanchor equipment was made years before I was born. Before I was a ham, I never knew that so many people still use boatanchor equipment today. I (and probably most other new hams) have no interest in boatanchor equipment because it is bulky and has fewer features than solid state equipment. Many boatanchor parts (like certain vaccuum tubes) are hard to obtain, and someone inexperienced like myself is even less well-positioned to find these items. If I want used ham radio equipment, I would rather buy solid state equipment from someone I know (through my club or a local net) than from a stranger at a hamfest, as I am uninformed and don't know what to look out for. I'm not a homebrewer, and even if I were, I would prefer the convenience of a Radio Shack.
2. I have heard a few people suggest that many amateur radio operators have been retiring in recent years and that most of them may have finished cleaning out their basements and thus have no desire to acquire more equipment and no items left to sell.
3. As a group, the amateur radio population has aged to the point that there have been large numbers of silent keys. The older hams more likely to become silent keys are also more likely to be hardcore hamfest attendees.

You will be pleased to know that I do attend a few hamfests a year despite the fact that I am NOT a boatanchor collector and NOT a hardcore homebrewer. However, I wouldn't drive more than about an

hour to attend one. (I attended the Manasses hamfest, Berryville hamfest, and FARfest, but I wouldn't go to Frostfest in Richmond or the Virginia Beach hamfest.) Why do I bother to attend?
1. A hamfest is a great place to socialize. I often meet other SKYWARN spotters, other club members, people I meet at the Northern Virginia QRP lunches, and people who frequent the same net I do. I consider amateur radio to be a VERY social hobby. (What good would amateur radio be without other people to talk to?) In fact, most of my social life arises directly or indirectly as a result of amateur radio.
2. Occasionally, I buy equipment and supplies. The advantage of a hamfest over mail-order or the Internet is that I can see it up close, and I'm not limited to the HRO selection. (I suspect hamfests have more appeal for those who don't live near a major dealer like HRO or AES.) I bought an MFJ-945E tuner at FARfest 2000. I bought coax with an SMA connector at my club's hamfest (Winterfest 2001) so I could connect my Yaesu FT-50R to a better antenna instead of being limited to traditional small HT antennas. I bought RF chokes at this year's Manasses hamfest.

Any ideas on how to increase hamfest attendance?
1. Programs: My club, the Vienna Wireless Society, invites speakers to our annual Winterfest. (The next one is Sunday 3-3-2002 at the Northern Virginia Community College at Annandale.) This year, Riley Hollingsworth was among the speakers.
2. Computers: A few people who came to Winterfest thought we were a computer show, and a few of my fellow club members suggest promoting Winterfest as partly a computer show. The more I think about this, the more apparent it becomes that amateur radio needs to market to computer hobbyists. Think of the similarities: Both like technology, and a significant percentage of both groups are homebrewers. And both hobbies now intersect through the increasingly popular digital modes of amateur radio.
3. Appealing to nonhams: This one is my idea. To promote this year's Winterfest, I posted flyers on bulletin boards at the community college where we held the event. I made sure to emphasize the physics and engineering buildings. A few students did show up, but we didn't track this. (Does anyone have any idea on how to do this? Would asking attendees how they found out about Winterfest on the tickets they submit for prize drawings work, or would people be too hurried to answer?)

Only six? You don't have a tag axle to soften the beating to the old
rhoids? Send them to Omaha and I will give you the tour in a 1979 Chance
minibus with only six tires. How about a rusty school bus for drunk runs?
They only have six tires.

Cheapskate!

Killing Osama bin Laden will only create a martyr.

Holding him prisoner will only inspire his comrades to take hostages
to
demand his release.

Therefore, we should do neither.

Let the Special Forces, Seals, Green Berets, etc., covertly capture
him, fly
him to an undisclosed hospital and have surgeons quickly perform a
complete
sex change operation.

Then return "her" to Afghanistan to live as a woman under the
Taliban.

>Wrong. The FCC database DID contain birthdate information until 1997.
>That's when they stopped collecting it and removed the data from their on-line
>database. The FCC has announced plans to start collecting birthdates again.

:-) Not quite that good a correction. :-)

The FCC license database does NOT NOW contain any
birthdate or age information. Not only that, but the new
database format was changed since 1997. That is verifiable
to anyone who kept the old data field format information.
Few have so another pointless argument can be generated. :-)

>>The current amateur radio license database is 55.4 MB
>>in size, hardly something downloadable to a "Commodore
>>64" as stated in another post.

That is still true although the Applications database file is
only 27.6 MB in size. As far as I know/remember/recollect,
even a rare Commodore 128 couldn't handle that small a
size in downloads. :-)

Yes, I grant you that the old FCC amateur radio license
databases DID contain age-related information. They were
also smaller in size, grouped by ZIP codes, and downloads
did not take forever with an average transfer rate of 45 KBPS.

Yes, I know of an announcement that the FCC will once
again start collecting age-related information...but whether

or not it is included in a future database is uncertain. Only a few gifted souls can foretell the future. I can't. :-)

>>"QRZ" is a commercial entity in the business of providing
>>a database in "callbook" format with additional information
>>not found in the FCC database records. Their database is
>>not obtained solely from the FCC.

That is still true. They have been carrying personal entries and graphics from listed individuals PLUS corrections given by individuals. One of those corrections possible was to remove the old birthdate information from the QRZ database. K0HB and W0EX have both removed theirs, among others. :-)

I have to comment that Hans Brakob's QSL is quite attractive. Esthetically pleasing, it shows a love of nature and his home region.

QRZ seems to be a growing rival for the ARRL website insofar as news and topics.

>forbid certain activities by those under a stated age...such as
>driving a vehicle, drinking, being able to vote to name three
>examples.

True in some cases, but not in all cases.

In the case of driving a vehicle, studies have shown that the teenage drivers have more accidents than older drivers. And the younger the teenage driver, the greater the probability of accident. Part of this is due to inexperience behind the wheel but a large part is not. All of this is reflected in auto insurance rates.

In the case of drinking alcohol, research has shown that the harmful effects of ethanol are greater in young people, who are still growing.

Voting age used to be 21 but is now 18.
>
But NONE of this has anything to do with the question of an age limit for a US ham license.

>bigotry, and bias.

Nope. The entire adult world does not think that the FCC should enact an age limit for a license.

>
>>Name some amateur radio problems caused by licensed hams under the
>>age of 14.

>
>Responsibility or lack of responsibility due to immaturity have
>been in humanity's laws for centuries.

So? That's not an answer to the question.

To my knowledge there has NEVER been an age limit for any US amateur radio license - either by the FCC or its predecessors. If the licensing of young people is a problem, there should be examples of age-related problems in the ARS. Yet LHA cannot produce even ONE example of a problem caused by the licensing of a person under the age of his proposed limit.
>
>In some regulations of the federal government of the US there is
>no requirement to show ages for certain permits and licenses.

But not the amateur radio service. Never has been. FCC obviously does not think there is a problem, and never has.
>
>N2EY is being idiotic on the assumption that very young
>licensees (as young as four years old) are responsible and
>can therefore be granted a federal license.

You can call me names but you cannot produce even ONE example of a problem caused by the licensing of a person below your proposed cutoff that is age-related.
>
>>Why are you so stuck in the past? The code test issue is a dead duck, as I
>>have said many times.
>
>Test element 1 passing is still a regulation requirement for a

Only because S25.5 still requires it. FCC has made that clear.
>
>S25.5 is still the same in the ITU-R Recommendations.
>
And will remain so until it is changed. So what? Nothing can be done about it until 2003 anyway. Does any reasonable person think that S25.5 will survive if/when challenged at a WRC?

>The FCC International Bureau's Informal Working Group 6
>has NOT yet adopted any draft on Item 1.7 (which includes
>ITU-R S25.5). IWG-6 keeps tabling that item.

Then argue with THEM.
>
>The code test issue is NOT a "dead duck" except to those

>who have long since passed such a test. They have no
>worry about ever having to pass such a test again.

The term "dead duck" simply means that the test is as minimal as possible, and that there is practically no chance that it will be increased. It also means there's not much that can be done about it before 2003.

>They
>also like to reply to code test issue remarks with the
>immature attitude of "I've got mine, nyah, nyah, nyah."
>
Not me. I can't control what others do.

>>>Let's hear it for the responsible 4-year-olds who can legally
>>>operate a transmitter!
>>
>>Do you KNOW the 4 year olds in question?
>
>Does N2EY?

You cannot answer a question with another question. Your own words, LHA.

It is clear that you don't know anyhting about the hams inquestion except that they are four years old.

I don't know them either, so I don't assume anything about them.
>
>The FCC amateur radio regulations do not make special
>dispensation for alleged child-geniuses.

The FCC has NEVER had an age limit for an amateur license, either. Even in the days when it was easy to unintentionally transmit out of band, there was no age requirement.

>While the FCC
>regulations stress responsibility, there are rather explicit
>examples (expecially in rec.radio.amateur.misc) of legal,
>licensed radio amateurs who are quite immature,

>
Are any of them under 14 years of age? If not, there's no reason for an age limit.

>The FCC Enforcement Bureau notices have many
>examples of violations of the radio regulations...but the
>ages of such violators are not given nor is age information
>given in the amateur radio license database.

Not true.

Surf over to

http://www.qrz.com

and check out some callsigns, then click on "detailed information". Many, but not all, licensees birthdates are in the database.

I looked at the ARRL website article on enforcement letters for September 22, 2001. There were nine alleged on-air violators. Of the nine, six had their birthdates in the qrz.com database. Interestingly enough, the oldest alleged violator whose birthdate was in the database was born in 1918 and the youngest was born in 1951.

LHA has not produced a SINGLE example of a problem caused by the licensing of hams under the age of 14, yet he proposes such an age limit and calls those who oppose it "idiotic".
>
>>And there is a whole decade of development between 4 and your proposed age
>>limit of 14.
>
>Irrelevant.

Why is that irrelevant? Is there no difference between a 4 year old and a 14 year old?

>What is at question is the responsibility of
>children in operating transmitters that can reach across
>the entire world, transmitters that may be the cause of
>interference to public safety services.

Agreed. So where are the problems caused by licensed hams under the age of 14?
>
>While all the long-timers are reciting their coming-of-age
>in radio as teeners and spreading the myths of glory-
>through-saving-mankind (etc.), they seem quite silent on

under the age of 14?

I would not be surprised if my experience in that area far exceeds yours.

>.plus input from teachers along
>with advice from my wife (who has two Masters degrees from
>the University of Illinois, one in Education, and has been a
>high school history teacher plus teaching kindergarten and
>pre-schoolers).

And how many licensed radio amateurs under the age of 14 does she know? Did she
comment to the FCC?
>
>I've been long exposed to parents whose children are supposed
>geniuses, can never do anything wrong, are always responsible
>even when they've been caught red-handed in some act of
>irresponsibility.

Are any of the children licensed radio amateurs under the age of 14?
>
>Let's just say that I have a lot of skepticsm on the complete
>honesty of the Volunteer Examiners who passed those two
>children.

The FCC doesn't. They issued the licenses.

And your proposed limit isn't 4 years old, or 6 years old, or even 8, 10, or
12. It's 14 years old for ANY US amateur radio license. Yet you produce NO
EVIDENCE that licnesing such young people has caused ANY problems.
>
>>> 4-year-olds can read with full comprehension of the the text material!
>>
>>Full comprehension is not required to pass the tests.
>
>Approximately 70 percent passing is required for passing
>the US amateur radio examination written test elements.

So? The written tests are multiple choice. All a prospective ham has to do to
pass them is pick the right answers. No requirement of comprehension is
included.
>
>Is N2EY saying that four-year-olds all have such precocious
>genius-style reading ability?

Some obviously do.

>Is N2EY saying that all VEs are honest and true, never make
>a mistake, are never influenced by any parent of an examinee?

I'm saying that you are questioning their honesty without ANY evidence to the contrary.

>>>The FCC will determine what is meaningful for
>>>their regulatory task...but the FCC does listen to its
>>>citizens...ALL of them.
>>
>>Good thing they didn't listen to you.
>
>N2EY does not know this.

The term "listen to" in this context means to act upon a suggestion. The FCC did not act on your age limit idea. That's a good thing.
>
>Up to the January 15, 1999, NPRM Comment cut-off date,
>nearly 2000 documents had been received on 98-143.
>All who responded on or before the cut-off date were listed
>in an appendix to Report and Order 99-412.

The cutoff date for comments was December 15, 1999. You missed that date. The cutoff date for reply comments was January 15, 2000. You barely made that date.

Reply comments are supposed to ONLY be replies/rebuttals to other comments. Most of your reply comments were just that - replies and rebuttal to other comments. But some of it, including the age-limit idea, were clearly comments and not reply comments.
>
>Whether or not anyone was "listened to" is immaterial to any
>discussion.

Nope.

It's a GOOD THING that there is no age limit for a US ham radio license. Such a limit is totally unnecessary.

You have produced NO (as in ZERO) evidence that the licensing of young hams has caused ANY problems in the ARS.

N2EY

>>
>> <snip>
>>
>>Incorrect quote. The FCC database information does not
>>contain any data fields relating to age or birthdate of the
>>licensee. That may be verified by viewing the license
>>database information organization files available on the
>>FCC's Wireless Telecommunications Bureau's pages.
>
> Wrong again, Your Putziness...The FCC ahs once again resumed acquiring
>age/DOB information.

From file pa_ddef6.xls on the FCC website is the following description of all US amateur radio license entries:

1. Record type char(2)
2. Unique System ID numeric(9,0)
3. ULS file number char(14)
4. EBF number varchar(30)
5. Callsign char(10)
6. Operator class char(1)
7. Group code char(1)
8. Region code tinyint
9. Trustee callsign char(10)
10 Trustee indicator char(1)
11 Physician certification char(1)
12 VE signature char(1)
13 Systematic callsign change char(1)
14 Vanity callsign change char(1)
15 Vanity relationship char(12)
16 Previous callsign char(10)
17 Previous operator class char(1)
18 Trustee name varchar(50)

All 18 fields in one record are "piped," that is they are separated by one-character pipes or the vertical bar

character (|). Field contents are generally characters
as indicated by "char(10)" which would have 10 ASCII
characters. "Varchar" would have a variable length
field not to exceed the number of characters indicated
between the parens. Only two fields are numeric,
indicated by "numeric" or "tinyint."

There is no detail as to age or birthdate in any of the
other database description files. [pa_ddef6.xls is an
Excel file and free reader-only programs are available]

> AND....The DOB information on QRZ came from the FCC.
>
> Once again, you are FACTLESS.

Incorrect on "factless." Date of birth information is old
data either from the databases over four years old under
former field formats...or it can be supplied by individuals
listed or removed by individuals listed.

>>The current amateur radio license database is 55.4 MB
>>in size, hardly something downloadable to a "Commodore
>>64" as stated in another post.
>
> If you want to download the ENTIRE db, you'd be correct.

The smallest FCC databses are the Applications for a
particular day indicated in the filename (updated on the
previous day). Those who have been granted licenses
are found in the License files and are ZIPped. That file
size precludes use by any PC that does not have at
least 64 MB of RAM. That rules out many older PCs and
MACs not equipped for ZIP format file expansion..

>>Their database is
>>not obtained solely from the FCC.
>
> The information that you allude to is, Your Stupidness.

I do not "allude" to anything other than what information
is given by the FCC or the commercial QRZ organization.
The FCC database descriptions do not list any dates of
birth for any amateur radio licensees. QRZ allows listed
individuals to include considerably more data and graphics
than has ever been available from the FCC public record
information.

> Lennie...quit...quit now...you are more idiotic by the minute.

Anyone can go to the FCC and QRZ sites to research the
information to verify what they contain...or others can
guess at what is contained and come up with erroneous
data which is questionable.

"Dick Carroll" <dixie@townsqr.com>

>
> Then return "her" to Afghanistan to live as a woman under the
> Taliban.
>

What Taliban?

A father and his son are walking the Manhattan streets when the father stops at a vacant lot takes a deep breath and tells his son: "To think that at one time here on this very lot stood the Twin Towers."

The son looks at his father and asked: "Dad, what are the Twin Towers?"

Father says: "My dear son, the Twin Towers were two tremendously tall buildings with lots of offices that were the heart of the New York, but approximately 31 years ago, several Arabs destroyed the buildings."

The boy then thought for a minute and then asked his father, "Daddy what are Arabs?"

With all kind wishes,

de Hans, K0HB

> Not wrong. The information is still there.

NOT in the public database releases.

>>The FCC has announced plans to start collecting birthdates again.
>
> They are already doing it.

If that were true, then all VE testing would have to have a birthdate on the form that is submitted. It CURRENTLY does NOT. Therefore, they aren't actively doing it because they're not collecting it (yet) from new licensees. As a volunteer examiner, I have not (yet) been ordered to make certain that birthdate information is included, nor do our forms ask for it.

[It could be that the FCC is using the SSN to get the birthdate information from the SSA, but that's not the same as the agency collecting the information first-hand, which is what was announced would be happening soon.]

>limit for a license.

If someone looks for irresponsible teens, they will find them. I have a
great number that I would trust with my life.

>>Responsibility or lack of responsibility due to immaturity have
>>been in humanity's laws for centuries.
>
>So? That's not an answer to the question.

You expected the Unruly One to actually give a straight answer...?!?!

>Yet LHA cannot produce even ONE example of a problem caused by the
>licensing of a person under the age of his proposed limit.

Every licensee under 21 disproves most of Lennie's rants. He HAS to
believe that this is right, otherwise his rants are wrong....

>You can call me names but you cannot produce even ONE example of a problem
>caused by the licensing of a person below your proposed cutoff that is
>age-related.

On the other hand, we can produce evidence of people Lennie's age who ARE
a problem....

>>Test element 1 passing is still a regulation requirement for a
>>US amateur radio license grant of extra or general class.
>
>Only because S25.5 still requires it. FCC has made that clear.

More facts that Lennie cannot avoid, Jim.

>> They also like to reply to code test issue remarks with the
>>immature attitude of "I've got mine, nyah, nyah, nyah."
>>
>Not me. I can't control what others do.

Lennie hears voices like that, Jim...Even though they are not there...

>LHA has not produced a SINGLE example of a problem caused by the licensing of
>hams under the age of 14, yet he proposes such an age limit and calls those
>who
>oppose it "idiotic".

Of course...that's how he "debates" things, Jim...If someone DARES to
suggest that "he" is wrong, they are an "idiot"...

or "elitist"...

or "jackbooted"...

or "thug".....

>Agreed. So where are the problems caused by licensed hams under the age of
>14?

In Lennie's fantasies.

Lennie has yet to regale us with the experiences HE has had raising
children...he tells of his "exposure" to kids, but not of his own...ANOTHER
lack of practical experience.

>You have produced NO (as in ZERO) evidence that the licensing of young hams
>has
>caused ANY problems in the ARS.

Of course not...that would require facts or experience....he has NEITHER.

Soooo, may I assume that you believe the answer to the 9/11 acts of terror is to totally eliminate all Arabs, everywhere, in a 21st Century Holocaust? Sorry, but leave me out. I have a lot of Arab/Islamic friends here in Delaware who had nothing to do with that action, and came here to be able to live their lives as free Americans, rather than under the oppressive rule of Islamic fundamentalist despots. If you raise a single finger in anger at them, you will have to deal with me!

Let's get the people responsible for these acts of terror, and all who are even remotely associated with them, and make them wish they were never born! But let's get the *right* people; not fellow law-abiding, peace-loving Americans. I am sure you did not mean to imply that genocide of the Arab race was in order.

Dick:

OK, OK, already! I make my living driving "cutaway" type Paratransit
busses based on Ford E-350 or E-450 Super Duty chassis, with a
single, dual wheel rear axle, so I guess I was thinking primarily about
the "work" hardware, not a "tour" style bus like we'd use on the trip
to Dayton. Therefore, you're correct -- we'd have to select one with
8 fresh, new Michelin tires of the proper type. We use a similar rig
for our "intercounty" service which runs between Wilmington, Dover,
and points South. However, they're operated by a subcontractor, not
by DART personnel like myself. Kind of a ripoff for those drivers, since
they drive a bigger, heavier, higher pax-count bus, for significantly
less money and few, if any, benefits!

Learn about my company at http://www.dartfirststate.com

I wonder if THEY thought being called "Nursie" was a compliment.

>That may have been male
>chauvinism by today's standards but it existed as a general
>term of affection then.

Maybe.

But the 1950s ended 40+ years ago, and the nurse in question is not female, even though you repeatedly refer to him that way.
>
>"Highly qualified?!?" :-)

>is uncomplimentary?!? :-)

The discussion is about YOUR behavior, LHA. Pointing at others' behavior is an attempt to redirect attention away from the subject under discussion. It is like the child who says "But Johnny was doing it!" as an excuse for bad behavior.

Let's make it perfectly clear:

You have repeatedly used the profession and employment of others as a way to insult, denigrate and deprecate those who disagree with you. How they respond to such treatment is not an excuse for YOUR behavior.

It is therefore logical that intelligent people would be hesitant to give details of their profession and employment to you.

You can't talk your way out a reputation you behaved your way into, LHA.

October 29, 2001 - 8 days ago - ARRL format. Birthdates are NOT being
collected via the volunteer examination program.

>>...which is what was announced would be happening soon.]
>
> IS happening.

[It's] Not for all persons having "amateur radio business" before the FCC. The
collection of a birthdate, if it is indeed happening now, is not universal
across all types of applications.

Heh. Probably because N2EY was not in the military of any
country in the 1950s. Couldn't have been...

>>At that time nurses were almost always female and almost
>>always commissioned officers.
>
>I wonder if THEY thought being called "Nursie" was a compliment.

Some did. Some didn't. Why is N2EY so concerned about
that subject? It does not involve amateur radio, US foreign
policy, or old bad songs.

>The discussion is about YOUR behavior, LHA. Pointing at others' behavior is
>an attempt to redirect attention away from the subject under discussion. It is
>like the child who says "But Johnny was doing it!" as an excuse for bad
>behavior.

Heh heh heh. This all started out on my challenge to N2EY
as being a "master of the Smith Chart."

N2EY now claims not to be a "master" but simply "mastered"
it. That remains just a claim. N2EY hasn't made any
comment on use of the Smith Chart, given any hints on what
it is or how to use it. He claims "we know what it is" as if the
"we" is either the royal "we" or that all radio amateurs know
all about it. Neither is verifiable nor can it be a viable reply.

Smith Charts do not have to be used by any radio amateur.
Radio amateurs aren't required to progress in their theory

and understanding of same beyond their license test
questions. They can spend their entire amateur radio
"career" (loosely speaking) not knowing anything further in
radio other than operating. All have that option.

However, some radio amateurs bluff and bluster about
radio (in general) as if they are "masters" (or nearly so)
of radio and claim all sorts of technical expertise. Those
aren't "experts in radio," just braggarts and bluffers playing
an odd sort of con game to "prove" they are "better." If
they are challenged in theory matters they try to hide
their inexperience or lack of knowledge behind more
bluster or in misdirection away from the subject or in
personal insults against the challenger. Those who have
some experience in theory matters can spot bluffers
immediately.

>Let's make it perfectly clear:

:-)

>You have repeatedly used the profession and employment of others as a way to
>insult, denigrate and deprecate those who disagree with you.

TS. Those who have insulted, denigrated, deprecated me got what
they gave right back at them PLUS coherent arguments on the
subject. That's in the archives.

Long experience in amateur radio, credentials obtained and
waved about, quoted jingoism, etc., is NO qualification for
insults on another's person...especially so when there is a
failure of the long-timer fundamentalist credential-waver to
address a subject properly and with a civil attitude.

Experience and knowledge in any technologically-oriented
field should be able to be carried over from professional
activity to amateur activity where both activities involve the
same technology. Some radio amateurs are quite against
that (apparently) by cites of "but this is AMATEUR radio"
(K3LT) not professional. Specious argument. The physics
of radio and electronics are not separated by some man-
made legislation and regulations on radio services.

> How they respond
>to such treatment is not an excuse for YOUR behavior.

Heh. Defensive misdirection by N2EY. Or sympathy with
the "nursie" character in here, such as on the other-thread
non-discussion over his insistence that the FCC now has
licensee's ages in their license database. Review that
exchange (no need to go into archives) and read the replies
then read the responses from "nursie." I repeated public
information from the FCC website on the license database

fields (no indication of birthdate) and Dieter Stussy replied
with his direct experience as a VE that the FCC does not
now directly collect such age information. N2EY wishes
to defend the "nursie's" remarks as somehow worthy of
respect and a credit to the "service?"

>It is therefore logical that intelligent people would be hesitant to give
>details of their profession and employment to you.

No, not logical at all. It's an emotional matter to the hesitant
and those who may have some insecurity feelings.

No one MUST give their professional activities away but
such does serve as a base of individuals' knowledge on
subjects under discussion.

Does work in the medical profession have a direct bearing
on radio? No. Does bus driving have a direct bearing on
radio? No. Does work in electronics have a direct bearing
on radio? Yes, but must be qualified as to the particular
electronics discipline since some disciplines of electronics
do not involve radio directly. Primary electrical power
distribution would be one such occupation...but even that
needs further definition since such a general title could
encompass work ranging from meter reading to design of
distribution systems.

>You can't talk your way out a reputation you behaved your way into, LHA.

Neither can I talk my way out of being called a "putz" or
other not-nice things. :-) Why try? It is impossible to
prove or disprove a negative. Yet there are a number of
long-time fundamentalist credentialled radio amateurs in
here who have consistently made lies and libelous
associations of my experience and personal character.
That's in the archives, too, but those same individuals
don't want that publicized again. :-)

Everything that is written in these newsgroups is a
reflection on US amateur radio. Anyone with newsgroup
access can look in and judge for themselves. Is N2EY
proud of all of the statements of other radio amateurs
writing in here? Would he present those statements
as proof of the goodness and nobility of US radio
amateurs? Or isn't it just SOME of the statements are
highlighted in an effort to win newsgroup message
points for N2EY's personal satisfaction?

We do a campus shuttle over at Nebraska/Omaha (6-0 in Division 2) and
Creighton with old cutaways from ski resorts in Colorado. Twelve are
gassers on E250 chassis, four are diesels with tag axles on 350 frames,
never seen a 450. Then there is the Beast, the Chance minibus I mentioned,
going strong after 1.1 megamiles; the Cat diesel will be there when the body
rusts off.

One of them came with a decal indicating automatic tire chains. They had
been removed unfortunately because a lot of drivers would like to see how
chains can be installed on a dual automatically. We also generally remove

the electric hill retarders.

This morning I did my usual church racket plus Rent-a-Wino, a run for a temp help agency over to an old Western Electric warehouse over in Iowa. Iowa is an accronym by the way; stands for Idiots Out Wandering Around.

You can prove your erudition in crowded spaces by pointing out that 'detour' was a man's name. Seems Captain Detour took the boundary commission after the revolution on a wild goose chase to be sure that Washington Island ended up in the USA. You can find the False Detour Channel on one of the insets of the Rand McNally road atlas.

Well, I'm not going to take sides, Steve. The only reason I said anything at all is because I once had a similar fight about my employer several years ago. At that time, I could not name my employer or what I was doing (I was in Italy working for DoD, which was gearing up for Kosovo at the time). All of which left me in a real bind during that argument. Because of that, I'm rather sensitive about demands concerning a person's employer.

There are two FCC amateur radio databases. The one being kicked
around here is the one reachable by the public and does not have
age/birthdate information. The other is a non-releaseable database
reachable only by FCC workstations on the FCC WAN, and does contain
DOB information.

I got the month wrong. I meant September. I must have had something else on
my mind. :-)

I am part of a testing team that offers testing on the last Saturday of every
month, and since 1994, I believe we've only skipped 3 months due to holidays.

Ok, so Phil Kane is able to connect to the FCC wireless area
network? But most of the participants in here cannot?

It's a nice bit of information, Phil, I grant you that, but in public
discussion shouldn't we all concern ourselves with publicly
available information?

Oh, and there are several other amateur callsign databases
about, not just the two mentioned. QRZ may be the biggest?
Haven't seen the Buckmaster CD and haven't tried the ARRL
callsign search (probably can't, not a member).

Does the QRZ callsign database contain OTHER information
not found on the publicly-available FCC databases? Or does
it not? Seems to me it does.

No problem with me on that, Dwight. I've done "black" (secure)
work too...and at more than one place. No communicating
whatsoever with anyone outside the group and the company.

I don't think that all the participants in here work black. Most
would have rather open-product employers...and not all in here
have to be employed.

5469. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-08 05:31:01 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <9prdml$c99$1@news.hawaii.edu>
Source record: 21713
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefaced
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

>
>Heh. Probably because N2EY was not in the military of any
>country in the 1950s. Couldn't have been...

So what? The point is still the same: The 1950s ended 40+ years ago and the term and how you used it are not complimentary.

QED.

>
>>>At that time nurses were almost always female and almost
>>>always commissioned officers.
>>
>>I wonder if THEY thought being called "Nursie" was a compliment.
>
>Some did. Some didn't.

Were you a nurse in the 1950s?

> Why is N2EY so concerned about
>that subject? It does not involve amateur radio, US foreign
>policy, or old bad songs.
>
It is proof of how you bechave when given information about the profession and employment of someone who disagrees with you here. Along with things like making fun of people's names, physical characteristics and other ad hominem type attacks. Anyone who reads your stuff long enough knows what I am talking about.

>>The discussion is about YOUR behavior, LHA. Pointing at others' behavior is
>>an attempt to redirect attention away from the subject under discussion. It
>is
>>like the child who says "But Johnny was doing it!" as an excuse for bad
>>behavior.

>
>Heh heh heh. This all started out on my challenge to N2EY
>as being a "master of the Smith Chart."

More attempted redirection.

I did not claim to be a "master of the Smith Chart". I wrote that I had mastered both the Smith Chart and Morse code, and use both. Different thing entirely. But you ignore the distinction.

There is a form of propaganda called the "Big Lie" where the propagandists simply repeat a false statement over and over in an attempt to convince people that it is true. Sure looks like you are doing that, LHA.
>
>N2EY now claims not to be a "master" but simply "mastered"
>it.

Nope.

I only claimed to have mastered it - from the very beginning. I NEVER claimed to be "master of the Smith Chart". That's your spin.

I have challenged you to produce the post where I claimed to be "master of the Smith Chart" and all you produced a post where I wrote (in the signature line) that I have mastered both the Smith Chart and Morse Code.

There is a form of propaganda that I call the "Big Dummy" or "Big Deaf" where the propagandists simply ignore facts that disprove their propaganda.

>That remains just a claim. N2EY hasn't made any
>comment on use of the Smith Chart, given any hints on what
>it is or how to use it.

So? Is that the criteria? It seems to me that only employment at a job that you approve of will qualify someone as having Smith Chart knowledge. Nothing else seems to matter to you.

> He claims "we know what it is" as if the
>"we" is either the royal "we" or that all radio amateurs know
>all about it. Neither is verifiable nor can it be a viable reply.

And this relates to your behavior in what way?
>
>Smith Charts do not have to be used by any radio amateur.
>Radio amateurs aren't required to progress in their theory
>and understanding of same beyond their license test
>questions. They can spend their entire amateur radio
>"career" (loosely speaking) not knowing anything further in
>radio other than operating. All have that option.
>
Yep, that's true. But it's not what I did. I learned more about radio (theory, practice, skills, regs, safety, etc., etc.) after passing the exams.

They also have the option of using tools like EZNEC2000, which can eliminate the need to use a Smith Chart for transmission line/antenna system matching problems.

>However, some radio amateurs bluff and bluster about
>radio (in general) as if they are "masters" (or nearly so)
>of radio and claim all sorts of technical expertise. Those
>aren't "experts in radio," just braggarts and bluffers playing
>an odd sort of con game to "prove" they are "better."

Yeah, some do that. Some nonamateurs do that, too.

I have never claimed to be an "expert" on anything, or a "master" of anything, here on rrap.

>If
>they are challenged in theory matters they try to hide
>their inexperience or lack of knowledge behind more
>bluster or in misdirection away from the subject or in
>personal insults against the challenger.

You mean like calling someone "Nursie" and referring to that person by the wrong gender?

>Those who have
>some experience in theory matters can spot bluffers
>immediately.

Yep. But some people bluff about their ability to spot bluffers, and claim all sorts of knowledge about people they have never met and know little about.

To be clear: I'm not bluffing.
>
>>Let's make it perfectly clear:
>
>:-)

Finally, LHA gets a cultural reference ;-)
>
>>You have repeatedly used the profession and employment of others as a way to
>>insult, denigrate and deprecate those who disagree with you.
>
>TS.

True Story? Yes it is.

>Those who have insulted, denigrated, deprecated me got what
>they gave right back at them

Translation: "He did it first!"

The fact remains that you do it, and other things like making fun of people's names - even those who do not make fun of your name.

You cannot talk your way out of a situation you behaved your way into.

> PLUS coherent arguments on the subject.

Now THAT'S funny! Your arguments are not always coherent or even correct. For example, the question of EZNEC2000's ability to simulate transmission lines, the FCC database info on dates of birth, division by zero and the need for an age limit for an amateur license are subjects where your "coherent arguments" have been shown to be full of holes.

Is it possible for a person with a post restructuring Technician class amateur radio license to have some amateur radio HF privileges? Yes or no?

> That's in the archives.

Which you apparently do not access.
>
>Long experience in amateur radio, credentials obtained and
>waved about, quoted jingoism, etc., is NO qualification for
>insults on another's person...especially so when there is a
>failure of the long-timer fundamentalist credential-waver to
>address a subject properly and with a civil attitude.

Long experience in nonamateur radio, credentials obtained
and waved about, quoted jingoism, alleged military colloquia,
etc., is NO qualification for insults on another's person, name,
profession, or employment...especially so when there is a
failure of the long-timer fundamentalist professional
credential-waver to address a subject properly and with a civil
attitude, and to admit mistakes, errors and gaps of knowledge..
>
>Experience and knowledge in any technologically-oriented
>field should be able to be carried over from professional
>activity to amateur activity where both activities involve the
>same technology.

And vice versa - but ONLY if they apply to the situation described. Amateurs cannot be judged solely by "professional" criteria because the goals, resources and purposes are not the same.

>Some radio amateurs are quite against
>that (apparently) by cites of "but this is AMATEUR radio"
>(K3LT) not professional.

I am not K3LT. All those who disagree with you are not identical clones.

>Specious argument. The physics
>of radio and electronics are not separated by some man-
>made legislation and regulations on radio services.

Specious argument. The goals, resources and purposes of different radio services are different, so the applicability of techniques may or may not carry over.
>
>> How they respond
>>to such treatment is not an excuse for YOUR behavior.

>
>Heh. Defensive misdirection by N2EY.

Nope. It's a basic concept of civilized behavior. It's something good parents try to teach their children from a very young age.

>Or sympathy with
>the "nursie" character in here, such as on the other-thread
>non-discussion over his insistence that the FCC now has
>licensee's ages in their license database. Review that
>exchange (no need to go into archives) and read the replies
>then read the responses from "nursie." I repeated public
>information from the FCC website on the license database
>fields (no indication of birthdate) and Dieter Stussy replied
>with his direct experience as a VE that the FCC does not
>now directly collect such age information.

And you ignored the fact that the QRZ database does indeed contain such information - which could only have been obtained from the FCC database. That's how they got my borthdate, anyway.

In addition, Phil Kane has stated that the FCC has DOB information, they just don;t put it in the publicly-accessible database.

All of this is simply a misdirection on your part because the point being discussed is whether the licensing of young children as hams has caused on-air problems. You have not given a SINGLE example where a ham below the age of 14 has been cited by the FCC for on-air irresponsibility. Yet you claim that an age requirement is needed. You seek to cure a problem that does not exist.

>N2EY wishes
>to defend the "nursie's" remarks as somehow worthy of
>respect and a credit to the "service?"

More misdirection by LHA. The point being made was YOUR behavior on this NG when you have information of others' profession and employment.

>>It is therefore logical that intelligent people would be hesitant to give
>>details of their profession and employment to you.
>
>No, not logical at all.

It's logical to not enable another person's immature behavior. That's one of the biggest reasons I keep quiet on certain issues. (Others are the fact that they have no relevance).

It is interesting that you have never said that you would not make fun of my job, and that you have never mentioned my education other than to make fun of my Extra class license, deprecating it as an "academic achievement".

>It's an emotional matter to the hesitant
>and those who may have some insecurity feelings.

Well, that leaves me out. I'm neither hesitant nor insecure.
>
>No one MUST give their professional activities away but
>such does serve as a base of individuals' knowledge on
>subjects under discussion.

How?

I have previously stated that while I did RF design professionally in the past, I do other things now. That description was carried over through several posts, yet you obviously ignored it or did not understand it. It's in the archives.

It is clear that you will ONLY accept employment as proof of Smith Chart knowledge.
>
>Does work in the medical profession have a direct bearing
>on radio? No. Does bus driving have a direct bearing on
>radio? No. Does work in electronics have a direct bearing
>on radio? Yes, but must be qualified as to the particular
>electronics discipline since some disciplines of electronics
>do not involve radio directly. Primary electrical power
>distribution would be one such occupation...but even that
>needs further definition since such a general title could
>encompass work ranging from meter reading to design of
>distribution systems.

QED - if someone doesn't meet YOUR exact professional criteria, there's no way they can have mastered the Smith Chart, regardless of amateur experience, education, etc. You have made that perfectly clear. You even ignore academic achievements, despite being repeatedly pointed to them.
>
>>You can't talk your way out a reputation you behaved your way into, LHA.
>
>Neither can I talk my way out of being called a "putz" or
>other not-nice things. :-)

Nor can anyone else. Shall I list some of the things you have called me? Have I ever called anyone a name in rrap?

>Why try? It is impossible to
>prove or disprove a negative. Yet there are a number of
>long-time fundamentalist credentialled radio amateurs in
>here who have consistently made lies and libelous
>associations of my experience and personal character.
>That's in the archives, too, but those same individuals
>don't want that publicized again. :-)

More misdirection. The subject is YOUR behavior, LHA.

>Everything that is written in these newsgroups is a
>reflection on US amateur radio.

That's true to a point. This NG is only a tiny nonrandom sample.

>Anyone with newsgroup
>access can look in and judge for themselves.

Yup. They can see how YOU behave, too, LHA.

>Is N2EY
>proud of all of the statements of other radio amateurs
>writing in here?

How can one be proud of something one has no control over? I cannot control what others post. I don't believe in telling other people to shut up when I don't agree with them. But you have tried to get me to shut up when I persisted in disagreeing with you. (Telling someone to go away and discuss something else is a veiled way of saying "shut up"). It's in the archives.

>Would he present those statements
>as proof of the goodness and nobility of US radio
>amateurs?

Not all of them. Nor would I present your statements and behavior as an example of the kind that amateur radio needs, either.

Are YOU proud of all the statements you have made in rrap, LHA? Would YOU present them as examples of the way professionals should behave?

>Or isn't it just SOME of the statements are
>highlighted in an effort to win newsgroup message
>points for N2EY's personal satisfaction?
>
Nope. Just telling it like it is.

N2EY (who actually signs his posts)
>

> birthdate or age information.

Phil Kane has shown this to be incorrect.

> Yes, I know of an announcement that the FCC will once
> again start collecting age-related information...

FCC has announced that they will NOT process applications on old versions of Form 605. Not wanting to be out of date, I went to the FCC database and downloaded the zip version of the latest Form 605. It's only 70 kB when zipped and easily fits on a floppy when unzipped.

The latest version has an entry for date of birth, and the instructions note that providing DOB information is REQUIRED for amateur radio operator and certain other license applications.

That's straight from fcc.gov

> >>"QRZ" is a commercial entity in the business of providing
> >>a database in "callbook" format with additional information
> >>not found in the FCC database records. Their database is
> >>not obtained solely from the FCC.

However, in at least some cases it is clear that the FCC database is the source of DOB information.

The QRZ database had date-of-birth information on 6 of the 9 licensees cited for on-air violations in the September 22 listing on the ARRL website. All of them were much older than 14. Indeed, they were all well over 40 years of age.

It is possible to infer minimum age data from other sources. For example, a licensee is at least 4 years older than his/her current license. Knowledge of former calls (if any) and some old Callbooks or Callbook CDROMS can determine a minimum age, as well.

The main point of this discussion is being avoided, however:

Should there be an age requirement for a US amateur radio license? If so, why, and what age should be the minimum?

FCC and its predecessors have NEVER had an age requirement for an FCC license. To my knowledge they have never even proposed an age requirement for an amateur license. But as has been shown, they DO

currently require date of birth information.

LHA thinks that there should be an age requirement of 14 years, but has presented ZERO evidence that the licensing of younger people as hams has caused ANY on-air problems.

I think there is no need for any such requirement.

N2EY

Len was obviously caught off guard when you mentioned EZNEC. He hadn't heard of it. But in the interest of disguising that fact, he used a search engine to find out about it. He then, as he quite often does, typed what he had just learned into a post to the newsgroup in hopes that he would sound like an all-knowing, "master" of radio - rather than the narrow-minded pompous blowhard we all know him to be.

Well, I was certainly not doing anything to get excited about, but we all had blanket instructions to keep a relatively low profile (no comment, look like a tourist on vacation, etc.). And, since I was using an Italian ISP for my private internet activities, and it was common knowledge that tensions were building up in that area, I thought it wise not to mention anything at all. But this person wasn't willing to accept that (in the end, a made up story satisfied him). Take care, Len.

>
>So what? The point is still the same: The 1950s ended 40+ years ago and the
>term and how you used it are not complimentary.

So...the ground rules are: Licensed radio amateurs can call
others all sorts of names, use profanity about them, insult
their person, etc., with free privileges as fine, noble,
upstanding human beings...yet others, amateur radio
license or not, must submit meekly and accept such
without saying anything in response?!? Of course. :-)

>Were you a nurse in the 1950s?

No. I was in the U.S. Army Signal Corps 1952 to 1960.

>> Why is N2EY so concerned about
>>that subject? It does not involve amateur radio, US foreign

And everyone is getting a dose of "groundrules" stated above.
:-)

I think that N2EY is looking for a battleground in the wrong
newsgroup. Go on over to rec.radio.amateur.misc and just
read the subject titles. PLENTY of material there that is
good for the self-professed radio cop.

>>Heh heh heh. This all started out on my challenge to N2EY
>>as being a "master of the Smith Chart."
>
>More attempted redirection.

Nope. That's how it started out. I began this thread as a
spin-off from one of the endless N2EY postings which have
to argue individual sentences taken out of context. :-)

>I did not claim to be a "master of the Smith Chart". I wrote that I had
>mastered both the Smith Chart and Morse code, and use both. Different thing
>entirely. But you ignore the distinction.

Yes, I did, but neither do I see any distinction except that
"mastered" implies a past tense. Having mastered something
is the same as being a master of it at the time. :-)

>There is a form of propaganda called the "Big Lie" where the propagandists
>simply repeat a false statement over and over in an attempt to convince
>people that it is true. Sure looks like you are doing that, LHA.

So...another repeat of "having mastered is not the same as
being a master of" argument is not the "big lie" technique?
Must be so. I need to check those groundrules again. :-)

>I have challenged you to produce the post where I claimed to be "master of
>the Smith Chart" and all you produced a post where I wrote (in the signature
>line) that I have mastered both the Smith Chart and Morse Code.

So...there's a difference there? :-)

Okay, so if N2EY mastered the Smith Chart once, then he
can talk about it in some detail? So far all anyone has
heard is a claim that author Phil Smith held an old amateur
license (callsigns no longer use that format) and that he
kniew morse code. Those two gems of knowledge aren't
germane to knowing the Chart sufficient to claim having
mastered it.

>I have never claimed to be an "expert" on anything, or a "master" of
>anything, here on rrap.

Heh, still trying to convince folks that "having mastered"
something is not being a master of it? :-)

>>Those who have
>>some experience in theory matters can spot bluffers
>>immediately.
>
>Yep. But some people bluff about their ability to spot bluffers, and claim
>all sorts of knowledge about people they have never met and know little about.

Heh...so, to prevent being hit by the mirror again, N2EY is
invited to talk in detail of the Smith Chart. He did claim to
have mastered it. :-)

>To be clear: I'm not bluffing.

Yes you are...and being petulant about it. :-)

>Now THAT'S funny! Your arguments are not always coherent or even correct. For
>example, the question of EZNEC2000's ability to simulate transmission lines,
>the FCC database info on dates of birth, division by zero and the need for an
>age limit for an amateur license are subjects where your "coherent arguments"
>have been shown to be full of holes.

No holes. EZNEC is based on the Numerical Electromagnetic
principles of modeling antennas; saying that any NEC program
is really a "simulator of transmission lines" is wrong. While the
FCC may have a database NOT availalbe to the public that
contains dates of birth, that cannot be used as prima facie
evidence that it is applicable to public discussion. The
mathematical division by zero has been shown in here to be
all sorts of special conditions (that was never a real argument
only one posted out of aggravation by N2EY on a remark about
his "equalization" phrase). The "need for an age limit of
amateur licensees" was not a "need" at all but an item of
comment in regards to 98-143 received by the FCC on 13 Jan
99...which had already been "reviewed" by others in here
following the comment cut-off date.

There's a double standard operative there plus plenty of
misdirection to take the readers' minds off the subject of
Smith Charts, mastery or not. :-)

>Long experience in nonamateur radio, credentials obtained
>and waved about, quoted jingoism, alleged military colloquia,
>etc., is NO qualification for insults on another's person, name,
>profession, or employment...especially so when there is a
>failure of the long-timer fundamentalist professional
>credential-waver to address a subject properly and with a civil
>attitude, and to admit mistakes, errors and gaps of knowledge..

>And vice versa - but ONLY if they apply to the situation described. Amateurs
>cannot be judged solely by "professional" criteria because the goals,
>resources and purposes are not the same.

Who was "juding amateurs solely on 'professional' criteria?"
I was not. I simply pointed out that experience and knowledge
in technology could be carried over. I did not say an imperative
"only," just that it should be so. The word-twisting done tries to
make it appear so.

>>Some radio amateurs are quite against
>>that (apparently) by cites of "but this is AMATEUR radio"
>>(K3LT) not professional.
>
>I am not K3LT. All those who disagree with you are not identical clones.

...how about those who agree with you? :-)

>>Specious argument. The physics
>>of radio and electronics are not separated by some man-
>>made legislation and regulations on radio services.

>
>Specious argument. The goals, resources and purposes of different radio
>services are different, so the applicability of techniques may or may not
>carry over.

The "applicability of techniques" is man-made. Radio physics
is the same in all radio services.

>And you ignored the fact that the QRZ database does indeed contain such
>information - which could only have been obtained from the FCC database.
>That's how they got my borthdate, anyway.

Happy borthday. May you have many of them.

>In addition, Phil Kane has stated that the FCC has DOB information, they just
>don;t put it in the publicly-accessible database.

We know. :-)

I'm sure there are many things NOT in a publicly-accessible
database in may areas of information. Is that an argument
about PUBLIC discussion?

>All of this is simply a misdirection on your part because the point being
>discussed is whether the licensing of young children as hams has caused
>on-air problems.

Shouldn't that go under the "Endless Comments on 98-143"
thread? :-)

My Comments on 98-143, specifically in the last page of 14
pages of text, cited RESPONSIBILITY of a license (each
licensee is responsible for operation within regulations). My
claim, whether it is accepted by the masses or not, is that
children are not yet as responsible as adults.

>You have not given a SINGLE example where a ham below the age of 14
>has been cited by the FCC for on-air irresponsibility. Yet you claim that an
>age requirement is needed. You seek to cure a problem that does not exist.

So, by failure to meet the "qualifications" (apparently of
needing to search the entire FCC Enforcement Bureau
records or something similar) you can tell me that ALL
children are as responsible as adults?

How about 4-year-olds? Are they responsible enough to
operate on their own without parental monitoring? Their
licenses gave them that legal ability. There's nothing in
the regulations that say they could not operate unless an
adult was the control operator.

>>N2EY wishes
>>to defend the "nursie's" remarks as somehow worthy of
>>respect and a credit to the "service?"

>
>More misdirection by LHA. The point being made was YOUR behavior on this NG
>when you have information of others' profession and employment.

Hmmm...I was trying to talk about Smith Charts and such
technical tools. :-)

Somehow I was forced into a different direction. Most would
call that "misdirection." :-)

>>>It is therefore logical that intelligent people would be hesitant to give
>>>details of their profession and employment to you.
>>
>>No, not logical at all.
>
>It's logical to not enable another person's immature behavior.

Not at all "logical." Immature behavior is emotional, does not
respond to logic. Anyone venturing into any unmoderated
newsgroup must be prepared for any number of immature
and/or personally-offensive postings made by such
individuals. They cannot be anticipated unless the immature
constantly post.

>It is interesting that you have never said that you would not make fun of my
>job, and that you have never mentioned my education other than to make fun of
>my Extra class license, deprecating it as an "academic achievement".

I've never considered ANY amateur radio license as an
academic achievement. The agency that grants amateur
radio licenses doesn't consider it an academic
achievement. That agency isn't chartered as an educational
institution.

Some radio amateurs consider an amateur radio license
as a degree or educational certificate. That's an emotional
thing with them and they get all upset if everyone doesn't
regard it the same way. That emotional upset is demonstrated
by deprecating commercial radio licenses as insignificant or
nowhere near as "good" as their amateur licenses. :-)

Okay, so N2EY has "mastered morse code" and at high
rates, too. Does that verify his claim of "mastering Smith
Charts" or enough "RF design experience" to be
judgemental on all others? How does "mastering morse
code" tie in with knowing radio theory?

>>It's an emotional matter to the hesitant
>>and those who may have some insecurity feelings.
>
>Well, that leaves me out. I'm neither hesitant nor insecure.

Okay, so what does N2EY know about Smith Charts other
than QST having an article on them? Is he going to cop-out
again by saying "we know" again? :-)

>>No one MUST give their professional activities away but
>>such does serve as a base of individuals' knowledge on
>>subjects under discussion.
>
>How?

See the paragraph on "credentials" following.

>I have previously stated that while I did RF design professionally in the
past,
>I do other things now. That description was carried over through several
>posts, yet you obviously ignored it or did not understand it. It's in the
archives.

Okay, what KIND of RF design did you do professionally?
What part of the EM spectrum was used by this RF design?
Were solid-state devices used or was it all vacuum tubes?
That's not asking for a detailed description, just something
less vague than a very broad, general statement of "doing
RF design."

Okay, I'll accept your "doing RF design professionally in the
past." Now, how does that relate as a credential or
credential surrogate?

>It is clear that you will ONLY accept employment as proof of Smith Chart
>knowledge.

Not at all. Quit trying to twist words to suit your obviously
offended person. [see a following paragraph for "credentialism"]

>QED - if someone doesn't meet YOUR exact professional criteria, there's no
>way they can have mastered the Smith Chart, regardless of amateur experience,
>education, etc. You have made that perfectly clear.

I've never made any sort of claim to "having mastered a
Smith Chart" or anything else in radio-electronics. I'm
competent in some areas, still learning in other areas.
I thought I made that clear, but apparently others want
to twist things around to have another meaning. :-)

>You even ignore academic
>achievements, despite being repeatedly pointed to them.

I don't "ignore" them if I can't find a direct connection to
the subject at hand. How does "academic achievements"
enter into a discussion of Smith Charts? Can one learn,
understand, and use Smith Charts by themselves? Yes.
Are "credentials" necessary to prove such understanding
and use? No. Those who've learned, understood, and
used a tool can recognize others who've learned, under-

stood, and used such tools. Phony claimants are
spotted right away regardless of wavings of "credential
papers."

If the claimants get all upset at not being recognized
(or honored, even revered) for their claimed "achievements,"
then TS. If they can handle a chart tool demonstrating
understanding and use, that's good enough for others who
already understand and use that chart tool. THAT is the
only "credential" needed in either professional or non-
professional activities.

>>>You can't talk your way out a reputation you behaved your way into, LHA.
>>
>>Neither can I talk my way out of being called a "putz" or
>>other not-nice things. :-)
>
>Nor can anyone else. Shall I list some of the things you have called me?

Now, now, you are getting all upset at PERCEIVED direct
personal dishonor. :-)

If you feel this overwhelming need to search archives and
go over and go over and go over what has been said in the
past, you are free to do that. That way you can argue
endlessly that what you did was not wrong and that what
others thought was all wrong. Now, how does that look to
all the other readers in here?

>>Why try? It is impossible to
>>prove or disprove a negative. Yet there are a number of
>>long-time fundamentalist credentialled radio amateurs in
>>here who have consistently made lies and libelous
>>associations of my experience and personal character.
>>That's in the archives, too, but those same individuals
>>don't want that publicized again. :-)
>
>More misdirection. The subject is YOUR behavior, LHA.

Really? :-) I thought it was about Smith Charts... :-)

>>Everything that is written in these newsgroups is a
>>reflection on US amateur radio.
>
>That's true to a point. This NG is only a tiny nonrandom sample.

Seems to me that the fundamentalists of this "tiny
nonrandom sample" are trying very hard to prove
they are some kind of leaders. :-)

>>Anyone with newsgroup
>>access can look in and judge for themselves.
>

>Yup. They can see how YOU behave, too, LHA.

I have no problem with that. :-)

>>Is N2EY
>>proud of all of the statements of other radio amateurs
>>writing in here?
>
>How can one be proud of something one has no control over? I cannot control
>what others post. I don't believe in telling other people to shut up when I
>don't agree with them. But you have tried to get me to shut up when I
>persisted in disagreeing with you. (Telling someone to go away and discuss
>something else is a veiled way of saying "shut up"). It's in the archives.

Oh, oh, very personal angst being displayed! Tsk, tsk.

Interesting definition there: "(telling someone to go away and
discuss something else is a veiled way of saying 'shut up')"

Careful, careful on saying such things...they can boomerang.
:-)

Let's go back in the timeline. I made a comment in a rather
short posting about being a master of the Smith Chart. What
grew out of that was an almost vehement denial of being a
master of the Smith Chart with the excuse/rationale of what
was originally said was "mastered the Smith Chart" which
was "not the same" as being a master of it! So...things that
are the same are not the same? :-)

In a separate post I made some suggestions on the use of a
Smith Chart to another (Richard McCollum). That was done
out of familiarity of use of it, knowing how it can be a good
aid in certain problems. I've never claimed to have "mastered
the Smith Chart" or be any kind of "master." N2EY said that
"we know [all] that" but never once mentioned any particulars
of such use of the Chart, only some background information
on the author of it being a ham (old style call letters given)
and having to know morse code.

In the history of the Smith Chart, it's development came out
of the author's need to have an aid in analysis of landline
telephony transmission lines. It is obvious to anyone who
has worked on transmission lines of all kinds that this sort
of chart-diagram is an excellent tool. That's proven by its
immediate adoption and continued use in the whole of the
world's radio industry. The familiar format has become the
format for direct display on most network analyzers.

But...(here we get some promotional propaganda)...the
author of the Chart was described as a radio amateur who
knew morse code. That's such a tenuous association
that it can only be regarded as "spin."

>>Would he present those statements
>>as proof of the goodness and nobility of US radio
>>amateurs?
>
>Not all of them. Nor would I present your statements and behavior as an
>example of the kind that amateur radio needs, either.

Ah, it becomes clear. N2EY is the judge, the one who knows
what is good for amateur radio! All unbelievers get out! :-)

>Are YOU proud of all the statements you have made in rrap, LHA?

I just make postings in here. None of them involve "pride"
as N2EY puts it. :-)

>Would YOU
>present them as examples of the way professionals should behave?

I've been "behaving" among professionals for a long time
and this is no different. :-)

I've been "behaving" among human beings for a long time,
too, and I've seen lots and lots of folks pretending to be
"professional." :-)

If N2EY thinks that it is honorable and good for others to
use profanity against others, then that is one thing. Among
the rest of the human race such demonstrated profanity is
not considered a good thing. That's a general consensus
that doesn't need any poll to prove...it can be demonstrated
by trial in any "random sampling" of humans. If you wish to
do such a trial, I suggest having your medical insurance up
to date. :-)

>>Or isn't it just SOME of the statements are
>>highlighted in an effort to win newsgroup message
>>points for N2EY's personal satisfaction?
>>
>Nope. Just telling it like it is.

"Just telling it" from N2EY's viewpoint. :-)

>N2EY (who actually signs his posts)

As a radio station?!? A "signature" as it appears on
everyone's screen is just a printed form, not a true
signature that is hand-written. Why write down what is
already in the header information that everyone receives?

When did N2EY become your official surname? :-)

Phil Kane cannot connect to the FCC WAN. My login ID and password
became invalid on September 1, 1995, six years ago when I retired.
Any active FCC employee who has the proper access level can so
connect when on the FCC WAN, a private network.
>
>It's a nice bit of information, Phil, I grant you that, but in public
>discussion shouldn't we all concern ourselves with publicly
>available information?

"The FCC database" is what was discussed. Up to now no one has
pointed out that the FCC has two amateur radio databases - one
acessible by the public and one not so accessible. It's never been
a big secret. The data being kicked around (DOB/age info) does in
fact live on "the FCC's database" - the internal one.

>Oh, and there are several other amateur callsign databases
>about, not just the two mentioned. QRZ may be the biggest?
>Haven't seen the Buckmaster CD and haven't tried the ARRL
>callsign search (probably can't, not a member).
>
>Does the QRZ callsign database contain OTHER information
>not found on the publicly-available FCC databases? Or does
>it not? Seems to me it does.

That is correct. It contains lots of stuff that does not appear on
both the public and internal FCC database. As was pointed out by
others, QRZ's database DOB info came either from the FCC public
database at the time that the latter did carry the DOB, or from
amateur licensees who requested that such info be published
and provided the info to QRZ.

Where's the beef?

Untrue. :-) The original NEC has been around for some time
but was not ported to any personal computer until about five (?)
years ago and then in a very limited form. NEC was first

developed using FORTRAN and then translated to C. The
source code is public domain...and fairly large.

>But in the interest of disguising that fact, he used a
>search engine to find out about it.

Not quite. I used a search program to find a source for
the FORTAN versions...but that was over a year and a
half ago. I have it on CD now. While very interesting,
many other good folks have done conversions to
Windows, Roy Lewallen included. I've used EZNEC
a few times on a friend's installation, also a Canadian
company's NEC (on a free trial basis) that looked a
bit easier to use.

A year ago I ended my subscription to Antennex; that
site mentioned by Cecil Moore over two years ago.
Antennex is a good place for anyone to expand their
knowledge of antennas. W4RNL does a good column
in there on antenna modeling using the various NEC-
based programs...something that is not restricted to
just members.

That's nice to know. So, when is that birthdate information going to be in the public database? You know, the public database that QRZ and the others access to provide their information? Like the PUBLIC information discussed in a publicly-accessible forum... :-)

>> >>"QRZ" is a commercial entity in the business of providing

>> >>not found in the FCC database records. Their database is
>> >>not obtained solely from the FCC.
>
>However, in at least some cases it is clear that the FCC database is
>the source of DOB information.

WAS their source, you mean. :-)

Does QRZ obtain their information solely from the FCC?

Does QRZ accept modification of information of listings, such as eliminating birthdates?

>The QRZ database had date-of-birth information on 6 of the 9 licensees
>cited for on-air violations in the September 22 listing on the ARRL
>website. All of them were much older than 14. Indeed, they were all
>well over 40 years of age.

Chronological age. :-)

>It is possible to infer minimum age data from other sources. For
>example, a licensee is at least 4 years older than his/her current
>license. Knowledge of former calls (if any) and some old Callbooks or
>Callbook CDROMS can determine a minimum age, as well.

Didn't you forget other sources as well? But the whole thread
on age versus QRZ was started on the premise stated by
another that QRZ gets its information from the FCC database
which was alleged to contain birthdate information. However,
the described data fields of that same database does NOT
contain space for birthdate.

>The main point of this discussion is being avoided, however:

Who made that "main point?" Someone who says "we know"
a lot? :-)

>Should there be an age requirement for a US amateur radio license? If
>so, why, and what age should be the minimum?
>
>FCC and its predecessors have NEVER had an age requirement for an FCC

>requirement for an amateur license. But as has been shown, they DO
>currently require date of birth information.

...and they do NOT have that information in the public database.

>LHA thinks that there should be an age requirement of 14 years, but
>has presented ZERO evidence that the licensing of younger people as
>hams has caused ANY on-air problems.
>
>I think there is no need for any such requirement.

I'm sure you think that four-year-olds can operate reliably
and responsibly without parental monitoring. Sure you do.
Perfectly legal. If they are licensed as radio amateurs
they can never do anything irresponsible, can they?

Hey, it happens! A couple of years ago, while I was working as an
airport shuttle operator, I was following a truck crossing the Chesapeake
Bay Bridge at 60 MPH when one of the inside duals on it's trailer threw
a cap. An interesting experience, to say the least! Almost 200 feet in
the air, in the center lane, with nowhere to go on either side! Fortunately
I had adequate following distance to slow down a lot before hitting the
biggest piece of the thrown retread cap...not much damage, but not
an experience I wish to repeat!

It Seems to Us . . . We Are Not Alone

By David Sumner, K1ZZ
ARRL Executive Vice President
October 8, 2001

The day dawned perfectly in the northeastern United States. It was the sort of late-summer morning that heralds the imminent arrival of that most glorious of seasons: autumn, with its iridescent foliage and crispness in the air that makes the drawing of every breath a pure delight. It was a great day to be alive.

At 8:48 AM all that changed. The world changed, probably forever.

There is no need to describe here the horrific events of that second Tuesday morning in September, not that mere words possibly could. The images are burned into our minds and will stay with us as long as we live.

For those who lost loved ones the void can never be filled. For the rest of us, time may take some of the edge off the pain. Passing years may cause us to forget how helpless we felt as we experienced a chain of catastrophes unprecedented in American history, utterly incapable of knowing when or whether they would end. This may happen, but for now it seems impossible. Nothing, it seems, can ever be the same.

The attacks occurred on American soil, but it was not simply a national tragedy. We now know that it was an international tragedy, with people from more than 60 countries and every major faith tradition counted among its victims. But in the first moments of that terrible morning it was natural for Americans to feel isolated from the rest of the world. Our own jetliners, symbols of American technological prowess, had been turned against us. If we could not even trust our own mechanical creations, who and what could we trust? Were we alone in a world that suddenly had turned unimaginably hostile?

The answers soon began to arrive. Here in Newington they came in the form of emailed messages of condolence and support from radio amateurs throughout the world that began to arrive that very same morning, first as a trickle but soon as a flood. They came from our sister societies in countries as diverse as Japan, Germany, Turkey, Egypt, Lebanon, Oman, Pakistan, Syria, Yugoslavia, and dozens of others. They came from individuals in these and many other countries, some of whom shared their stories of why the United States occupied a special place in their hearts -- stories of great sacrifices made by GIs, of aid given when it was most needed after World War II, or simply of kindness shown by an individual American that reflected the best values of our open society. Thanks

to the thoughtfulness of our unique, global Amateur Radio fraternity, before that awful day had ended we were privileged to know what many Americans would not discover until later in the week: We are not alone. The entire civilized world shares our grief and our outrage.

Less than a lifetime ago the United States and its allies were fighting a two-ocean war against ruthless, implacable enemies. Today we count these former enemies among our closest friends. Some of the first messages offering comfort and support came from countries that experienced their own brush with the Apocalypse delivered by American bombers. Their friendship today did not spring from defeat and subjugation. Rather, it sprouted from seeds planted by what Tom Brokaw calls The Greatest Generation--my father's generation, the generation that not only won the war but equally importantly, also won the peace. Will my own generation do as well? Decades from now, will our children and grandchildren live in a world where today's enemies are friends? Or will they be forced to retreat into armed camps, suspicious of differences, unable to know the wondrous diversity the world has to offer?

As the war on terrorism is launched it is difficult to hold such lofty thoughts for long. The wounds are too fresh and too deep. Living one day at a time is challenge enough. Yet, as radio amateurs we can at least do this much. As the terrorists and their few sympathizers look for evidence that the civilized world is tearing itself apart, let them draw no comfort from what they hear on the ham bands. We are communicators. Let us communicate our resolve that the world must remain united in the face of terrorism. Let us communicate our respect for one another across the boundaries of nationality, religion, cultural background, and the other myriad ways society seeks to group us. Let us communicate our desire to increase our understanding of one another.

And let us remember the radio amateurs who died on that terrible Tuesday morning. Even as we look with hope toward the future, we know that our fraternity is the poorer for their loss.

We regret to report that the following Amateur Radio operators are listed among those missing from the World Trade Center and Pentagon Disasters:

ï¿½ Steven A. "Steve" Jacobson, N2SJ, 53, an ARRL member and a WPIX transmitter engineer from New York City.

ï¿½ William V. "Bill" Steckman, WA2ACW, of W Hempstead, New York, a WNBC transmitter engineer.

ï¿½ Michael G. Jacobs, AA1GO, 54, an ARRL member from Danbury, Connecticut.

ï¿½ Robert D. "Bob" Cirri Sr, KA2OTD, 39, an ARRL member from Nutley, New Jersey, and ARRL Hudson County District Emergency Coordinator. A Port Authority Police officer, Cirri was helping to evacuate workers from the World Trade Center when it collapsed.

ï¿½ William R. "Bill" Ruth, W3HRD, 58, of Mt Airy, Maryland, an ARRL member, who died in Pentagon attack. He was a Vietnam and Gulf war veteran and worked in the Pentagon.

ï¿½ Gerard J. "Rod" Coppola, KA2KET, 46, of New York City.

ï¿½ Winston A. Grant, KA2DRF, 59, of W Hempstead, New York.

Right up there with having a dump truck eject a rock from between the duals.

You know how to tell a driver don't you, it's the brown stains in his
shorts.

That 27 civilian aircraft have been shot down worldwide by terrorists using shoulder fired Stinger type missiles, (the last one a few days ago east of Turkey with the loss of over 100 lives) and that the previous Administration knew about, And routinely covered it up.... And that the evidence is overwhelming that is what happened to TWA Flight 800 off LOng Island?

Check this out...

Jim:

Yes, it is a bit more complex for the formulae more complicated then Ohm's Law, but it is still quite doable, I think.

Sorry about the "pea brain" wisecrack. As a former teacher, I do find it hard to believer that many would find it easier to memorize 60 sets of data and each one's matching answer rather then a fairly simple formula.

At the very least, some of the questions should probably be slightly revised. For example, I think all of the E5H questions have the lowest R and E value combinations as the correct answer.

As for the idea of using lists of values for questions and answers, yes I think it would work for many of the concept questions. Not for all of them, of course, but for some of them.

Hi Dick,

That's pretty frightening. I did think it was odd that so many people (Including a military officer) said that they saw a streak of flame moving toward the aircraft in the moments preceding the explosion. Then, nobody mentioned it again, strange. Take care and 73.

Mark

If this were to prove true (and remembering Tricky Dicky, nothing would surprise me one way or the other), then every one of them who conspired to cover it up should stand trial for high treason. Come to think of it, why didn't Jane Fonda ever stand trial? It is just about time to really clamp a lid on this thing. If the anthrax is proven to be terrorist related, I'd send all the nukie subs to sea and open the silos. Wouldn't have to say or do a thing. There are a number of countries with satellites and they will be screaming. You just assure them that our allies have nothing to fear. Send one of ours to the hospital, one of yours goes to the morgue. One of ours goes to the morgue, 10 of yours go to the morgue. Who wants some?

Didn't say every claim made there is gospel, but that much smoke =
some fire.

Vince Foster *was* a suicide, too. And Lee Harvey Oswald shot Kennedy
with a Italian Carcano carbine that is well known to be such a piece of
junk that not even an expert shot can hit the broad side of a barn with
one. I threw the one I had away, it was such a piece of junk. Righto.

>license or not, must submit meekly and accept such
>without saying anything in response?!? Of course. :-)

Nope.

Anyone can post anything they want on an unmoderated newsgroup - even you, LHA. But then what is posted can be commented on by others. When a poster behaves in a certain way, others can decide to post or not post requested information.

To be specific: LHA repeatedly demanded to know my employment and profession, supposedly so that LHA could judge my Smith Chart knowledge. I refuse to post that information, based on LHA's previous behavior towards others in this NG when LHA had their employment information. "Nursie" is just one example. It's simple common sense not to enable such immature behavior by LHA.

It's clear LHA wants the freedom to post anything he wants but don't like the consequences of his posting style.

>Yes, I did, but neither do I see any distinction except that
>"mastered" implies a past tense. Having mastered something
>is the same as being a master of it at the time. :-)

You are mistaken, but since fine points of English are totally lost on you, let's see what the dictionary says:

From the Random House College Dictionary, revised edition: "master: 1. a person with the power to use, control or dispose of something"

>>There is a form of propaganda called the "Big Lie" where the propagandists
>>simply repeat a false statement over and over in an attempt to convince
>>people that it is true. Sure looks like you are doing that, LHA.
>
>So...another repeat of "having mastered is not the same as
>being a master of" argument is not the "big lie" technique?

No, it's not. It's simply a point of English that you missed.
>
>>I have challenged you to produce the post where I claimed to be "master of
>>the Smith Chart" and all you produced a post where I wrote (in the signature
>>line) that I have mastered both the Smith Chart and Morse Code.

>
>No holes. EZNEC is based on the Numerical Electromagnetic
>principles of modeling antennas; saying that any NEC program
>is really a "simulator of transmission lines" is wrong.

Where did I say that?

EZNEC2000 can simulate transmission lines. That's a fact. Using EZNEC2000 can eliminate the need to use a Smith Chart to design transmission line matching sections.

>While the
>FCC may have a database NOT availalbe to the public that
>contains dates of birth, that cannot be used as prima facie
>evidence that it is applicable to public discussion.

You claimed that the FCC database did not the have the information. That was wrong.

In addition, the DOB information for most hams IS available publicly. Thus, the ages of most licensees cited for enforcement action can be easily obtained.

>The
>mathematical division by zero has been shown in here to be
>all sorts of special conditions

Nope. You're mistaken about that.

>The "need for an age limit of
>amateur licensees" was not a "need" at all but an item of
>comment in regards to 98-143 received by the FCC on 13 Jan
>99

An item of comment in a reply comment, where it did not belong.

Since your attitude on the subject has not changed, and you have no examples of problems caused by the licensing of young people, your argument IS full of holes.

>There's a double standard operative there plus plenty of
>misdirection to take the readers' minds off the subject of
>Smith Charts, mastery or not. :-)

Yep. The double standard is LHA's. He does not want to debate, he wants to be the Final Authority.
>
>>Long experience in nonamateur radio, credentials obtained

In terms of following FCC regulations for the ARS, it seems that licensed children are MORE responsible than some licensed adults. Just look at the enforcement letters.
>
>>You have not given a SINGLE example where a ham below the age of 14

Although it is highly probable that LHA will make fun of my work in
this field, I'll answer his questions.
>
> Okay, what KIND of RF design did you do professionally?

I produced prototypes of CATV/MATV devices, mostly amplifiers, to meet
customer specifications. Some were custom designs, others were mass
produced.

> What part of the EM spectrum was used by this RF design?

VHF and some UHF.

> Were solid-state devices used or was it all vacuum tubes?

All solid state.

> That's not asking for a detailed description, just something
> less vague than a very broad, general statement of "doing
> RF design."

You will probably have something negative or belittling to say about
it, based on your behavior in this NG over the past few years ;-).
>
> Okay, I'll accept your "doing RF design professionally in the
> past." Now, how does that relate as a credential or
> credential surrogate?

If it doesn't relate, why ask for it?

The above job was back in the 1970s, when I was in college earning my
BSEE degree. I worked about 35 hours a week as well as carrying a full
engineering course load. My ham radio experience was very useful in
that job.

> >It is clear that you will ONLY accept employment as proof of Smith Chart

A poor craftsman always blames his tools, Dick. ;-)

From the Warren Commission Report:

"Four experts in the field of firearms identification analyzed the nearly whole bullet, the two largest fragments and the three cartridge cases to determine whether they had been fired from the C2766 Mannlicher-Carcano rifle found on the sixth floor of the Depository. Two of these experts testified before the Commission. One was Robert A. Frazier, a special agent of the FBI assigned to the FBI Laboratory in Washington, DC. Frazier has worked generally in the field of firearms identification for 23 years, examining firearms of various types for the purpose of identifying the caliber and other characteristics of the weapons and making comparisons of bullets and cartridge cases for the purpose of determining whether or not they were fired in a particular weapon. He estimated that he has made "in the neighborhood of 50,000 to 60,000" firearms comparisons and has testified in court on about 400 occasions. The second witness who testified on this subject was Joseph D. Nicol, superintendent of the bureau of criminal identification and investigation for the State of Illinois. Nicol also has had long and substantial experience since 1941 in firearms identification, and estimated that he has made thousands of bullet and cartridge case examinations.

After making independent examinations, both Frazier and Nicol positively identified the nearly whole bullet from the stretcher and the two larger bullet fragments found in the Presidential limousine as having been fired in the C2766 Mannlicher-Carcano rifle found in the Depository to the exclusion of all other weapons."
****

One could argue, I suppose, that the bullet and bullet fragments which were examined had been planted and that the real ones were somehow nafariously disposed of, but I think that's more of a stretch than the more generally accepted story.

Doesn't address the problem that the bullet in question could never be
identified as the one which killed Kennedy. Tht one was lost, after the
atopsy which was not performed properly nor in accordance with even
normal practice, and certainly not with the care and safeguards needed
in such extreme circumstances. The Warren commission failed to consider
many witnesses, many of whom were never interviewed or whose interviews
were ignored.

I don't know if the FBI experts ever owned or even handled a Carcano carbine, but I did, and I've been known as a fair weapons handler. That thing was nothing but a gross piece of junk, and it was identical to the one said to have been the tool used to shoot President Kennedy.
It was a piece that demanded the bolt be completely closed to fire, as opposed to conventional bolt action weapons which will complete the closure of the bolt before firing in cases where the operator fails to completely close it. If the bolt was even a tiny fraction of an inch above seated position the [oecw simply would not fire until you manally completed the closure. Oswald was able to accurately fire three shots at considerable range with that thing? I don't believe it and I never shall.

>

Of course you're right. One could do that. I can leave the details to those whose job it is to sort them, with the full knowledge that there always the possibility- or liklihood- of there being more to the outcome than mere fact. But I KNOW about the Carcano carbine, and I'm firmly convinced that it could not have been the weapon used.

You really don't think that officialdom could have ever have allowed the American public to know that some other political entity actually assinated our president, do you? Any more than they could allow us to know that 26 or 27 airliners loaded with passenmgers had been shot down by international terrorists instead of crashing accidently. The World Trade Center was beyond any control, of course.

It's not my position to judge all these issues, but I cannot forclose the possibilities in the face of hard evidence. The Carcano carbine is hard evidence. And the TWA 800 situation was known very early on to have several witnesses who saw what they thought to have been a missile headed toward the plane. So.....

>
> - Who makes the Stinger-type missiles?

We do, and the Chinese are known to have made and sold a vesion of them
to third world nations, particularily middle eastern nations.

> - How do the terrorists get them?

During the Russian-Afghanistan war we supplied many of them to
Afghanis, and to Usama bin Laden's supporters, with whom we were allied
against the Russian invaders at the time. Bin Laden was at that time our
'friend'. It is known that a number of the missiles remained in Afghani
hands after the end of that war.
Since they are easily transportable and designed to be carried and used
by foot soldiers they can be easily brought across national borders
which are not well guarded.

> - Who trained the terrorists to use them?

Most likely we trained the trainers of current users during that above
mentioned war. Not that much skill is required to use them.

Dick

There were no other types of bullets found. Only one type. There's no reason to believe there were any other guns. At least not in the Warren report. You have to get really imaginative with the facts in order to believe other explanations. Some people find that an entertaining thing to do to pass the time.

> Oswald was able to accurately fire three shots
> at considerable range with that thing?

Evidently he was - according to the only facts we have available, Dick. You've got a good shooter with a rifle with expended rounds, and you've got one dead guy and another injured guy. Doesn't take a genious to come up with a plausible explanation; the guy with the gun did it.

> I don't believe it and I never
> shall.

"Whatever gets you through the night."

> But I KNOW about the Carcano carbine, and I'm
> firmly convinced that it could not have been the weapon used.

By the way, it was not a standard issue rifle. Again, from the report:

"The bolt-action, clip-fed rifle found on the sixth floor of the Depository, described more fully in appendix X, is inscribed with various markings, including ï¿½MADE ITALY," ï¿½CAL. 6.5," ï¿½1940" and the number C2766. (See Commission Exhibit Nos. 1303, 541(2) and 541(3), pp. 82-83.) These markings have been explained as follows: ï¿½MADE ITALY" refers to its origin; ï¿½CAL. 6.5" refers to the rifle's caliber; ï¿½1940" refers to the year of manufacture; and the number C2766 is the serial number. This rifle is the only one of its type bearing that serial number. After review of standard reference works and the markings on the rifle, it was identified by the FBI as a 6.5-millimeter model 91/38 Mannlicher-Carcano rifle. Experts from the FBI made an independent determination of the caliber by inserting a Mannlicher-Carcano 6.5-millimeter cartridge into the weapon for fit, and by making a sulfur cast of the inside of the weapon's barrel and measuring the cast with a

micrometer. From outward appearance, the weapon would appear to be a 7.35-millimeter rifle, but its mechanism had been re-barreled with a 6.5-millimeter barrel. Constable Deputy Sheriff Weitzman, who only saw the rifle at a glance and did not handle it, thought the weapon looked like a 7.65 Mauser bolt-action rifle. (See chapter V, p. 235.)

The rifle is 40.2 inches long and weighs 8 pounds. The minimum length broken down is 34.8 inches, the length of the wooden stock. (See Commission Exhibit No. 1304, p. 132.) Attached to the weapon is an inexpensive four-power telescopic sight, stamped ï¿½Optics Ordnance Inc. /Hollywood California," and ï¿½Made in Japan." The weapon also bears a sling consisting of two leather straps. The sling is not a standard rifle sling but appears to be a musical instrument strap or a sling from a carrying case or camera bag."

> You really don't think that officialdom could have ever have allowed
> the American public to know that some other political entity actually
> assinated our president, do you?

Anybody could have hired Lee Harvey Oswald. We don't need multiple shooters to prove that it was a hit job.

Again, the report:
"Many people who witnessed the assassination and the killing of Oswald or were present in the area were a major source of diverse and often contradictory information. As is easily understood under such circumstances, all of the witnesses did not see and hear the same thing or interpret what they saw and heard the same way and many changed their stories as they repeated them. Moreover, they were interviewed at different times after the event by different people and often under circumstances which made accurate reporting extremely difficult.

Even the occupants of the cars in the Presidential motorcade were not entirely in agreement in their accounts because they, too, saw and heard what happened from different positions. Moreover, those closest to the assassination were subjected to a physical and emotional strain that tended to affect their recollections of what they thought they saw or heard.

Consequently, the presentation of the news from Dallas included much misinformation. This, to some extent, was unavoidable, but the widespread and repetitive dissemination of every scrap of information about the President's assassination and its aftermath has helped to build up a large number of erroneous conclusions."

> Any more than they could allow us to
> know that 26 or 27 airliners loaded with passenmgers had been shot down

> Trade Center was beyond any control, of course.

I can believe that a missle was fired at flight 800. I just don't happen to believe there was sufficient reason for anyone to want it covered up. That's where that story, like most conspiracy theories,

falls to the ground in my view.

In a curious move, the USA Military has been dropping Baygen windup
radios onto many parts of Afganistan along with food and other humanitarian
aide to the Afgan civilian population.

The radios are pre-tuned to US Military Broadcast stations set up
across the border in Pakistan. The station is broadcasting anti-Taliban
programming.

This activity cou;ld possibly be coordinated by the US Army Civil Affairs
and Psychological Operations Command; 4th Psychological Operations
Group (Airborne) out of Ft Bragg.

Some links found on a google.com search about this very interesting
Unit, and their mission of radio / electronic broadcasting of uncensored
news to civil populaces under hostile control appear below... (great reading !!)

Actually, 325,000 spending an average of $500 yields $162.5 million.
This would be equal to about 20-30 Burger Kings.

Yes, one frequency locked radios to only receive the propaganda station broadcast by the US government. Afterwards, these radios will be worthless garbage that our tax dollars paid for.

later in the article...

But unlike those dropped by the Americans, these will
not be locked on to a single frequency and so will be
able to pick up broadcasts from independent media.

Now that makes sense. Let them hear OTHER sides too and let them make up their OWN minds, rather than shove our propaganda brainwashing broadcasting down their throats.

Except that the VoA (Voice of America) in Pashto is
losing out to the BBC in terms of believability.
See:
Linkname: Radio Netherlands Media Network: Media Newsdesk
URL: http://www.rnw.nl/realradio/html/medianews.html
9 October 2001: A difference of emphasis has emerged in the way the
international broadcasting services of the two main allies in the War
on Terrorism - the US and Britain - are handling coverage of the
strikes on Afghanistan. The Voice of America (VOA) expanded its
broadcasts in Afghanistan's two main languages on Monday, for the
second time since the 11 September terrorist attacks. VOA now
broadcasts in Pashtu and Dari for two-and-a-half hours a day each. The
expanded broadcasts allow VOA to include messages aimed at convincing
the Afghan people that the military operation now underway is not
aimed at them, but rather Osama bin Laden. They will also draw
attention to humanitarian food drops that are being conducted
concurrently with the airstrikes, and send the message that the
Taliban are not a proper government, according to a VOA official....

In contrast, the BBC World Service has also extended its Pashto
broadcasts, but is using some of the airtime to air the Taliban point
of view. The Times reports that shortly after the first air strikes on
Sunday night, the Taliban4s chief spokesman in Kandahar, Abdul Hai
Mutmaeen contacted the BBC Pashto service to give a defiant response.

The interview was broadcast live to Afghan listeners, along with translations and analysis of US and British government press conferences. Highlights of a recorded address by Osama bin Laden were also broadcast.

See the link for the full story and links to the English-speaking with forked tongues spokeswoman interview.

In article <3BC4B9F4.8621F9B9@uci.edu>, Jim Kelley <jwkelley@uci.edu> writes:

>I can believe that a missle was fired at flight 800. I just don't
>happen to believe there was sufficient reason for anyone to want it
>covered up. That's where that story, like most conspiracy theories,
>falls to the ground in my view.

One of the strongest proponents of the missle theory on the crash of TWA 800 was Pierre Salinger...who was in Paris at the time. [Salinger was Press Secretary to Kennedy during his adminstration] Salinger later retracted his "news" item and hasn't been a feature of TV news since. :-)

After a very long time of recovery and reconstruction, the airframe of TWA 800 was thoroughly inspected by several teams of aircraft experts. Their determination indicated that nothing penetrated the craft and that the explosion leading to breakup in the air was due to internal causes. That is, the explosion was outward, not inward.

This was revealed in a rather boring presentation on one of the documentary TV channels (either C-SPAN or PBS, can't recall which one) which detailed the probable cause (frayed wiring shorting in a fuel tank wire run) and the trajectory of the aircraft and aircraft pieces. The national TV news and newspapers picked up on both items. According to the findings of the NTSB and every-one else, the explosion severed the fuselage with the aft part spewing burning fuel...giving the impression of the "bright streak of light moving rapidly." A comparison of the flight data recorder readings (in forward part) and the impact point of most pieces led to this probability of paths in the air.

A directive from the FAA led to an inspection of Boeing aircraft wiring and more cases of frayed teflon insulation showed up in older aircraft. That was also in the news (national and in aviation trade publications). Having a nephew-in-law working as a wire installation instructor at Boeing confirms this (personal note, apparently the vogue is IN on having "behind the scenes" info to prove things as in the birthdate "now in the [secret] FCC database"). :-)

Conspiracy theories are, as you say, highly entertaining to certain people. They offer quick and simple explanations

on complex subjects, allow the entertained people to vent
their frustrations and other angst by hollering at others and
pointing blame. The conspiratists "know everything" but
they know nothing. Sort of like certain fundamentalists
who demand the status quo in amateur radio licensing.
:-)

No demand. What anyone posts is subject for discussion.

N2EY never posted anything relating to "mastery" of a Smith
Chart other than a claim. That claim was challenged. N2EY
still did not reply in anything specific other than "we [hams]
know it" and that it was the subject of an ARRL publication.

> I refuse to post
>that information, based on LHA's previous behavior towards others in this NG
>when LHA had their employment information.

Bullshit. N2EY made a phony claim and can't back it up.

He got called in message poker and can't ante up.

<large snip of more misdirection>

>>Okay, so what does N2EY know about Smith Charts other
>>than QST having an article on them?
>
>How to use them to solve some types of problems, for one thing.

No kidding?!?

For "one thing," why doesn't N2EY state some specific
solutions enabled by a Smith Chart? He hasn't done that yet.

>And I
>encountered them in several articles and in the ARRL Antenna Book.

Wow! Reading about something proves "mastery" of the
subject! What else has N2EY read about that proves his
"mastery" of the subject he read about?!?

Pfui.

Come back when you can demonstrate the "mastery" by
talking about something specific in that "mastery."

Keep up the Big Lie technique and keep saying an
opponent will "probably say something bad." Repeat
that often enough and many will believe you.

>> Okay, I'll accept your "doing RF design professionally in the
>> past." Now, how does that relate as a credential or
>> credential surrogate?
>
>If it doesn't relate, why ask for it?

Ill get to that shortly...

>The above job was back in the 1970s, when I was in college earning my
>BSEE degree. I worked about 35 hours a week as well as carrying a full
>engineering course load. My ham radio experience was very useful in
>that job.

Ok, that takes care of the period between 21 to 31 years ago.

Anything since then?

>> >It is clear that you will ONLY accept employment as proof of Smith Chart
>> >knowledge.
>>
>> Not at all.
>
>Then what AMATEUR credentials will you accept?

Sorry, you can't have it all your way on questions...or of
"credentials." You made a statement that I will "ONLY"
accept employment as proof of Smith Chart Knowledge.
That is highly incorrect.

Those who know what a Smith Chart is can talk about it
in detail large or detail small. They can't get by with a
response such as "we all know that." The "we know"
answer is not an answer at all, just an implication that
some group "knows about it."

So far N2EY hasn't stated anything to prove he knows
about it, only that he read of it (in ARRL publications) and
supposedly hams "know about it."

I have given some examples of use in a posting to another,
described briefly what it could do, can talk about it in
detail large or detail small. N2EY hasn't said anything
specific. Ergo, N2EY hasn't really "mastered" anything
except trying to get other folks to believe he "knows"
something.

>> I've never made any sort of claim to "having mastered a
>> Smith Chart" or anything else in radio-electronics.
>
>Irrelevant.

No, it is very relevant...just as N2EY seems to think that
a couple of degrees is very relevant...without stating much
at all (and that old information) about what he has done.
N2EY stated that he had "mastered the Smith Chart."
But N2EY can't talk in detail about it except to say "we
know." Phony.

Hint: CATV has advanced much in the last two to three
decades, both in frequency span and techniques. Of course
all of radio has also expanded since then.

>> I'm
>> competent in some areas, still learning in other areas.
>
>No "Extra right out of the box" yet, huh? ;-)

Tell me why I should bother. Why should anyone bother?

Some amateurs sneer at professionals while being quite
ignorant of the rest of the radio world, will not accept pro
experience as being "relevant" to amateur radio.

>You have made it clear that "amateurs" have no credentials unless they
>are also professionals.

Highly incorrect again. Why do you make up such stories?

I cite professional experience for the simple reason that
professional experience in radio-electronics has been most
of my working life...and that included 24/7 HF communications
trans-Pacific almost a half a century ago. But, according to
some "critics" in here, that "doesn't apply" because it was not
amateur experience...and "no one" can have any "amateur
experience" without the amateur license. One in here
expresses the opinion that those who don't have a license
don't know anything at all about amateur radio...continually.

If "no one can know anything about amateur radio without
a license," how can anyone know enough to even think
about entering? Explain that.

>> Now, now, you are getting all upset at PERCEIVED direct
>> personal dishonor. :-)
>
>I'm not "upset" at all. Just pointing out your double standard, and
>your behavior here.

N2EY is pointing out that he is agrieved and upset over
someone not recognizing his accomplishments...all the
while deprecating others who've had experience in radio
before him. The double standard was already operative
in here before I posted anything.

>Just like YOU are free to call people names and make fun of their
>professions.

Yes, I AM free to do that...but I only do it in response to
others who started it first.

N2EY wants to fault others for replying in kind, which
conveniently overlooks the fact that others are far more
unkind and denigrative than I. But, those unkind, denigrative
persons have amateur radio licenses, therefore they have
some civil permit to justify their behavior?

Of course they have. Sure.

>Translation: You want to post here but don't want me to point out when
>you make an error.

Sorry, but I don't recognize manufactured errors that are
not errors at all...and N2EY has done that on the AH0A
statistics.

>You want your posts treated as absolute fact and
>revered by all who read them.

I state many things. Some of them are opinion. Some
are statements of fact about referencible subjects which
are mentioned. My statements are just statements, not
pronouncements made by the fundamentalist radio
amateurs from some temple of ham radio that was

> Doesn't work that way.

As far as the ham fundamentalists are concerned, that
IS the way.

>I don't know. How do you think YOUR comments look? ;-)

I don't look for love (through statements) or anything else;
statements are debate, discussion, argument about the
subject.

How does N2EY think K4YZ's postings look? How about
the website author of "No SSB International"?

Better yet, what does the FCC think about the postings
of all those fundamentalists that wrote in response to
988-143. N2EY implies being privy to everything the FCC
does...he should be able to answer what the FCC thinks
of the amateur fundamentalists.

>You did? You previously said you'd never claimed to be a master of
>anything.

About N2EY claims of "mastering the Smith Chart."

Try to stay focussed here.

>LHA wants to be the judge. No one else can have an different opinion.

Anyone can have a different opinion on the SUBJECT.

N2EY is misdirecting things towards the person again.

N2EY said he "mastered the Smith Chart" but cannot say
anything definitive about it other than "we know."

>Where have I said that? The subject is YOUR behavior. You keep trying
>to point the finger at others.

Tsk, tsk, all along it was about "mastery of the Smith
Chart" originally stated by N2EY.

>LHA seems to think that it is honorable and good to make fun of other
>people's names and professions.

N2EY isn't a name at all (unless made so by court order).

N2EY indentifies himself solely by callsign in his "signings"
and in AOL mesage identification. Anyone trying to debate
by using a surname "Miccolis" makes him hostile. Why?

N2EY wants to shift the subject to "misbehavior" of another
in order to avoid saying anything definitive about what he
claimed to have "mastered" other than morse code.

>Guess that's "wrong" from LHA's viewpoint. No differing opinions, no
>analysis of LHA's comments is acceptable.

N2EY is using the Big Lie technique again. Tsk, tsk.

N2EY pardons his own behavior by trying to misdirect the
discussion about other persons.

Now, what can N2EY say about the Smith Chart that he
claimed to have "mastered"?

Leonard H. Anderson

Well all I am alive and doing well in NYC, I am in charge of
transportation for all Red Cross workers and volunteers. I had box
seats for tonights opening game of the playoffs at Yankee Stadium, but
some smart a$$ lifted the tickets on the ride home on the subway
tonight, so since I have tomorrow off, I decided to try this web tv
unit in the hotel room, it sux!

note to self, never buy a web tv unit.

Let's see, Len. You didn't take an exam under the old regs. You haven't taken an exam under the new regs. I'm guessing you won't take an exam under any future regs. The regs have already changed but your litany hasn't.

The fact that your behavior in the past is as N2EY commented gives no credence to your "Big Lie" technique comment. Most who will believe the comment will believe it because of your past actions.

> If "no one can know anything about amateur radio without
> a license," how can anyone know enough to even think
> about entering? Explain that.

The license, as you've often pointed out, is a beginning point. A
newcomer obtains a license and then begins to gather experience.
You could be a newcomer some day.

> >> Now, now, you are getting all upset at PERCEIVED direct
> >> personal dishonor. :-)

>
> Of course they have. Sure.

Now that Carl is gone, you're it, Len. I don't find others to be more
unkind or denigrative than you. It was probably pretty much of coin
toss in your case. You could've been writing endless letters to the
editor of your local paper. Instead, WE got you.

> >Translation: You want to post here but don't want me to point out when

> Evidently he was - according to the only facts we have available, Dick.

"Facts" only in that the findings were considered to be facts. That the
commission found them so does not automatically make them truth. There
was a documentary on television about a Briton who did a very thorough
investigation into the incident and reached totally different
conclusions. His reaoning was more believeable than the Warren
Commission's.

> You've got a good shooter with a rifle with expended rounds, and you've
> got one dead guy and another injured guy. Doesn't take a genious to
> come up with a plausible explanation; the guy with the gun did it.

Nor does it take a genius to understand that someone setting up a
"patsy" could easily make it appear that that is exactly how it
happened. Oswald himself might have thought he was the killer, when in
fact another sharpshooter with an accurate weapon actually fired the
fatal shot.

I cannot be convinced that Oswald could have done it with THAT rifle.
Those things were just not even modifiable into a "good" wuality weapon,
one which could have performed as the murder wapon would have had to.
IMO, of course.

> Again, the report:

>

All that is understandable, but still there are far too many loose ends
that were totally ignored by the Warren Commission, and too many things
which were assumed, such as the bullet "found" with the body in DC at
the time of the autopsy, where none was found earlier. It was assumed
that this must be the correct bullet.

> > Any more than they could allow us to

> > Trade Center was beyond any control, of course.
>
> I can believe that a missle was fired at flight 800. I just don't
> happen to believe there was sufficient reason for anyone to want it
> covered up.

A long string of such incidents, well reported, would have had about
the same effect on the airline industry, and thus a grossly negative
effect on the national economy and psyche, that the WTC incident has
had. Congress really didn't want to dole out the $15 billion to them,
but neither did they wish to see the economy drop into depression. Some
such things just evolve incrementally, and are not really planned. I
hear the airlines are now runnig about 60% capacity. That probably won't
be enough to sustain them.

> That's where that story, like most conspiracy theories,
> falls to the ground in my view.

No argument there. But I *know* that the "official" version is not necesarily the truth any more than anyone else's versionrather at times just the more desirable version. That knowledge alone is enough to give one pause when there are serious questions about how they arrived at their conclusion.

5519. Re: Did you know???

>haven't taken an exam under the new regs. I'm guessing you won't take
>an exam under any future regs. The regs have already changed but your
>litany hasn't.

Heil's litany hasn't changed one bit. Still upset about not being
revered and honored about "using CW as an order-wire on an
RTTY circuit [for State]" he chooses to taunt his perceived
enemies. :-)

This particular thread was started by someone who loves
conspiracy theories.

Perhaps Heil thinks that advocacy of eliminating the morse code
test is part of a giant conspiracy theory to humiliate Heil?

Clue: It isn't a theory. There is no conspiracy.

Is amateur radio made attractive by taunts and jeers and insults
from the amateur long-timers against those who have
experience in other radio? Is it made attractive to those who
don't have experience in radio? How is it made attractive by
acting arrogant, bossy and using bullying tactics?

5520. Re: Complements and Compliments

In article <3BC516B0.99B75E4E@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>We don't know that you've ever done anything you've claimed either, Len.
>Most of us don't care. Why does someone have to provide proof of his
>knowledge to you for any purpose whatsoever?

Nobody HAS to provide proof of anything...they can go ahead
and tell all the fish stories they want.

Spouting fish stories doesn't make them true. It only shows
that they can spout fish stories. Such stories are phony.

Does Heil need lessons in how to use a Smith Chart?

I can show how to use one effectively. Anyone else who
has used Phil's Wonderful Diagram will know that I know.
No problem except to those poor souls who are offended
at someone else knowing how to use a basic tool.

>Schoolyard taunts?

No more than Heil's...:-)

Heil seems concerned only with one other individual. That
certainly looks like "schoolyard bullying," doesn't it?

Oh, not to Heil, to all the other readers who are NOT
amateur radio fundamentalists.

>You've gotten your Walter Mitty up to full steam.

Nope. I just got two "Walter Mittys." One of them is
surnamed Heil.

>What proof does he owe someone such as yourself?

As I said, anyone can spout fish-stories...but that
doesn't mean those stories are true.

Anyone can make a claim. If they do it good enough,
many might believe them. Problem is when they try to
keep on doing it without showing a single bit of evidence
that they know anything about it they look phony.

>I just finished a homebrew duoband 12/17m yagi using the para sleeve
>design. I optimized it using YO. It goes up tomorrow. Need I prove it
>to you before using it?

No. Are you worried it won't work? :-)

This isn't about knowing antennas or how to erect them, it is about erecting strawmen by saying they have "mastered" something without revealing a single item of their being able to use it.

Keep on making the erections, Heil, you seem to like that.

5521. Re: USA air-dropping Baygen radios on Afganistan (really !!)

More words of wisdom (NOT!) from another @home.net twit. If they buy their own radios, they can listen to whoever they want. If the U.S. is buying them (with my tax dollars!), then they can jolly well listen to the U.S. broadcasts.

Mark

The Big Lie is kept alive by the fundamentalist amateurs.
Their problem, not mine.

>So, if someone hasn't demonstrated his skill directly to you, he doesn't
>know anything. It's an interesting concept.

Anyone can claim "mastery" or "mastering" of something.
If they cannot talk in some detail of its use, they really
don't know anything about and cannot claim to have
"mastered it."

Someone who talks in some detail will demonstrate to others
knowing about the subject. MANY others. A Smith Chart is
rather well known to those who have worked in RF matching
of any kind.

Those who don't know anything of the subject can tell fish
stories and try to make fun of those who know the subject.
That seems to be Heil's case.

>I wish I had some proof about all of those old army tales of yours, Len.
>I'll bet you spent your time leaning on a coke machine telling the other
>guys how you'd run things if YOU were in charge.

No. I was in charge of the duties assigned to me.

Heil doesn't seem to like that others might have had more
experience than himself. TS for Heil.

>> Hint: CATV has advanced much in the last two to three
>> decades, both in frequency span and techniques. Of course
>> all of radio has also expanded since then.
>
>Hint: Your hint hasn't the slightest to do with Smith charts.

My message to Richard McCollum briefly explained some
uses of the Smith Chart.

Community Access TeleVision (CATV) has nothing to do
with amateur radio either but I did not bring it up, N2EY did.

Is use of Smith Chart useful to a CATV RF equipment
designer? Yes it is, especially in designing phase
equalizers, amplifiers, networks of all kinds.

Smith Chart use and measurement capability to show
both parts of a complex impedance or admittance would
be very useful to a radio amateur. Such a tool would
enable maximizing signal transfer in any mode, even CW.

>The license, as you've often pointed out, is a beginning point.

No. I've NOT said "often" or even a few times that an
amateur license is a "beginning point."

What I HAVE said is that it is a grant from the federal
government to operate in certain frequency bands using
certain modes under certain regulations.

>A newcomer obtains a license and then begins to gather experience.
>You could be a newcomer some day.

I am not a "newcomer" to radio. Radio physics is the same
for all radio services. Amateur radio fundamentalists (read
"PCTA" into that for it is a fundamental part of fundamentalism)
insist artificially that it is unique.

>Many of your "statement" are issued from on high to mere radio amateurs.
>One would expect to find a boat load of hams in an amateur radio
>newsgroups. Forgive those of us who do not find your edicts
>fascinating.

It is well known in this newsgroup that fundamentalists
abhor negative criticsm of their opinions. Those
fundamentalist viewpoints are not fascinating to any but
the fundamentalists.

>> I don't look for love (through statements) or anything else;
>> statements are debate, discussion, argument about the
>> subject.
>
>Then you aren't disappointed at the response.

The attacks on the person of those opposing fundamentalism
is to be expected. Always has been and shown in here.

Emotional to the core, the fundamentalists take negative
criticsm of a general kind as some kind of call to battle.
They are not armed well so they attempt to shout down the
perceived enemy. They don't really win anything but they
delude themselves into thinking they've "won."

Some engage in gorilla warfare forgetting they are just
bananas.

Some think they are building SNARF missles. Those are
just SuperNatural Amateur Radio Fantasies. Those
missles are unflying identified objects.

>...and therein lies some of your angst.

No "angst." Just some irritation at certain amateur
fundamentalists who can only express anger and resentment
at those who do not accept their divinity.

>Dave K8MN
>(a guy WITH a radio station--catch my talk show on 20m)

Broadcasting talk shows is not allowed in amateur radio.

Loose Lennie is the only soul on the NG who doesn't know that the code is deader than a doornail as far as testing is concerned. Of course, he isn't capable of even 5wpm, so for him it is still the ultimate barrier. OF course that really doesn't matter cuz in the most remote and unlikely event that he should ever qualify even as a Novice he would be the ultimate lid anyway.

their OWN
> minds, rather than shove our propaganda brainwashing broadcasting down
their throats.

Why exactly would we want to do anything to help the enemy? And if this is
just anti-propaganda on your part... what exactly would you call what the
other side is broadcasting? If your answer is propaganda, which it should
be... reread my first question.

Where in NYC are you? Kinda strange they'd ask someone from Ohio to
"wagon master" in an area that they'd have no knowledge of the "lay of
the land". With 14 counties within 100 miles of The Pile, there'd be
more than enough volunteers that would at least know how to get from the
UN to mid-town without having to battle traffic or which bridge would be
best to get to the 30th St shelter

Just curious. If you're in Brooklyn at all, let me know (here) and I'll
take you to a great NY deli..the best pastrami and corn beef this side of
heaven.

>N2EY
>still did not reply in anything specific other than "we [hams]
>know it" and that it was the subject of an ARRL publication.

As usual, an untrue propagandist attempt to undermine Jim's otherwise factual posts.

>Bullshit.

The kind of adjectives that come from the mind of someone who took 15 years to complete a 4 year degree.

>N2EY made a phony claim and can't back it up.

A Leonard H. Anderson lie.

Leonard H. Anderson lies a lot.

>He got called in message poker and can't ante up.

I dare say his is the winning hand. All we have seen from you is jokers, so far.

><large snip of more misdirection>

A rhetorical lie.

>No kidding?!?

No, I'm not kidding. You lied again.

>For "one thing," why doesn't N2EY state some specific
>solutions enabled by a Smith Chart? He hasn't done that yet.

Per your frequent insistance, this is SUPPOSED to be a forum for the discussion of Amateur Radio POLICY, specifically Morse Code examination requirements.

As usual, however, you make it whatever you want to make it as long as you think it makes you look good.

Up till now I can say you look REAL good....for someone wearing egg.....

>Wow! Reading about something proves "mastery" of the
>subject! What else has N2EY read about that proves his

>"mastery" of the subject he read about?!?

Jim has listed other references/experiences at length...You "snip" him here to make it seem unifocal.

When will you understand that you are not being allowed to do that without being "challenged" yourself?

>Come back when you can demonstrate the "mastery" by
>talking about something specific in that "mastery."

YOU come back when you can demonstrate something other than ugliness and manipulation of Clintonian proportion, Your Putziness.....

>The Big Lie is kept alive by the fundamentalist amateurs.
>Their problem, not mine.

Sorry...THAT one is The Big FACT...Your conduct is everything you decry in others, and more.

>No. I was in charge of the duties assigned to me.

No, you were "responsible" for the duties assigned to you. You MAY have been in charge of personnel assigned to you.

>Heil doesn't seem to like that others might have had more
>experience than himself. TS for Heil.

TS for Anderson...most everyone else HAS had more experience than him...Including some elementary school kids...No wonder he wants to see an age minimum for Amateur licensure....

>My message to Richard McCollum briefly explained some
>uses of the Smith Chart.

Kinda like the stuff you can get from the ARRL handbook, huh...?!?

>No. I've NOT said "often" or even a few times that an
>amateur license is a "beginning point."

Yes, you have. Repeatedly. It's in the archives. Want your nose rubbed in it, or shall I just leave you to look the fool we already know you are...?!?

>What I HAVE said is that it is a grant from the federal
>government to operate in certain frequency bands using
>certain modes under certain regulations.

Yes, you have...in addition to stating that the license is a beginning.

>I am not a "newcomer" to radio.

You are not even a newcomer to Amateur Radio. Youa re less than a neophyte.

>Radio physics is the same
>for all radio services. Amateur radio fundamentalists (read
>"PCTA" into that for it is a fundamental part of fundamentalism)
>insist artificially that it is unique.

No, you lie again.

(Does your wife tolerate this from you?)

What we (yes...WE) have said is that Amateur Radio PRACTICE is not the same.

You refuse to acknowledge this, trying, instead, to interject your "professional" experiences as to what you think this is all about.

You are, as we all know, a fool.

>It is well known in this newsgroup that fundamentalists
>abhor negative criticsm of their opinions.

No...we abhor having someone who obviously doesn't have a clue trying to tell us what is and isn't in the Amateur Service.

That abhorable someone, Lenie the Clueless, is you.

>The attacks on the person of those opposing fundamentalism
>is to be expected. Always has been and shown in here.

No, actually...Many "negative" opinions get shared here...it's when you insist on refering to anyone who object to YOUR opinion as Nazis, elitists, thugs, etc that the real flaming starts.

You asked for it...you must like it!

>They don't really win anything but they
>delude themselves into thinking they've "won."

You are so apt at recognizing your behaviour, except when you are utilizing it "against" others.

>Some think they are building SNARF missles. Those are
>just SuperNatural Amateur Radio Fantasies. Those
>missles are unflying identified objects

(S)ituation (N)ormal, (A)nderson (R)anting (F)anatically...get it right, Lennie.....

>>Dave K8MN
>>(a guy WITH a radio station--catch my talk show on 20m)

>Broadcasting talk shows is not allowed in amateur radio.

Since he has (1) a station (2) a station license and (3) an operator license, he CAN engage in conversations ON a radio...even "talk"ing!

You may, without a license, listen...we'll be talking about YOU, Lennie......You may RSVP here.....

>leading to breakup in the air was due to internal causes.
>That is, the explosion was outward, not inward.

Of course, we have never experinced a govenmental cover-up that was
perpetrated to "protect" the populace.

You know...like people suddenly having some reason to NOT patronize a
major transportation medium thereby causing a major economic upheaval...

Kinda like the one that hit the airlines after September 11th, 2K1.

>This was revealed in a rather boring presentation on
>one of the documentary TV channels (either C-SPAN or
>PBS, can't recall which one) which detailed the probable
>cause (frayed wiring shorting in a fuel tank wire run) and
>the trajectory of the aircraft and aircraft pieces.

It may very well HAVE happened that way...but does it's portrayal on a TV
show make it right?

>Conspiracy theories are, as you say, highly entertaining
>to certain people.

You, of all people, LOVE "conspiracies"....You have levelled accusations of
them against everyone from (A)RRL to K4Y(Z) in an attempt to lay blame for
any/everything you have a rant about.

That's why your credibility in this forum is zilch-point-squat.

They offer quick and simple explanations
>on complex subjects, allow the entertained people to vent
>their frustrations and other angst by hollering at others and
>pointing blame. The conspiratists "know everything" but
>they know nothing. Sort of like certain fundamentalists
>who demand the status quo in amateur radio licensing.

>Sort of like certain fundamentalists
>who demand the status quo in amateur radio licensing.

There hasn't been "status quo" in Amatuer licensing in 11 years...get over it...your rant died a terrible death before it ever got started.

which one? The Jewish one that tolerates LHA referring to and obsessing
with Hitler and the 3rd Reich or the supposed current Mrs LHA who is a
social butterfly, accompanying LHA on his many excursions to all his
amateur radio fiends?

Kinda reminds me of the Edith Bunker syndrome.

Hey, what's the difference between LHA and the Hindenberg??

Give up???

One is a giant nazi gasbag and the other was a dirigible

ha ha ha get it LHA is a giant gasfilled nazi lover

Actually, until recently K1MAN had an amateur radio talk show on the air. He was eventually pulled off because he failed to show that a control op was on duty at the times of the transmissions. If not for that, he's still be on...so as far as LHA is concerned HE'S WRONG AGAIN!!!!!

Westlink Radio news is regularly re-broadcast on amateur related frequencies (usually 2 meters though)

Both were/are allowed by the FCC so as far as LHA is concerned HE'S WRONG AGAIN!!!!

Amazing note..that LHA constantly drops back 10 and punts out the "this is an amateur radio related group" macro, yet repeatedly posts things well outside amateur radio. As far as LHA is concerned HE'S WRONG!!!!

5534. Cable Specs

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-11 17:25:38 UTC
From: Phil Kane <Phil.Kane@no.spam>
Message-ID: <cuvyxnansvbet.gl1pec2.pminews@or.news.verio.net>
Source record: 21778
Cross-posted to: rec.radio.amateur.policy,ba.broadcast

Recently, at the request of the local cable company, I have tried to
get the shielding and attenuation specifications for a RG6-u
coaxial cable prominently marked "Wan Lung" as sold by a local
quite-reputable electronics parts dealer.

Wan Lung Cable, a division of Neotech in Taiwan, has said in two
e-mail messages that their cable specifications are "secret file"
and have refused to supply the above information.

I recommend that all here do not buy or use cables made by Wan Lung
for any application, as they apparently constitute "mystery meat".

Wait 'till I post this to the SBE and SCTE boards........ <ggg>

>
>Ok, that takes care of the period between 21 to 31 years ago.

It was about 25 years ago. I left that job in 1976, when I got the BSEE from
Penn.
>
>Anything since then?

Like I said several times before - I do other things now, professionally.

As far as RF design since then, I designed and built from scratch an HF amateur
radio receiver, two HF amateur radio transmitters, three HF amateur radio
transceivers, two HF antenna couplers, two amateur radio VFOs, power supplies
and control systems for all of the above, some basic test equipment, and
several amateur radio antenna systems, both HF and VHF.

That's the short list. There's also the stuff I restored from basket-case
status, kits assembled, parts recycled from old uses to new, ham radio classes
taught, articles written, and more. Plus the stuff I have to look up because I
don't remember it offhand.

Somewhere in there (1992) I got my MSEE from Drexel University, too, while
working fulltime.

But I guess all of that is not relevant, according to LHA.
>

I have no idea what that means.

>You made a statement that I will "ONLY"
>accept employment as proof of Smith Chart Knowledge.
>That is highly incorrect.

Then what will you accept other than employment?

I guess BSEE and MSEE are just "misdirection" and don;t count as "academic
achivements", huh? ;-)

>
>Those who know what a Smith Chart is can talk about it
>in detail large or detail small.

Yup.

>They can't get by with a
>response such as "we all know that."

Yup.

>The "we know"
>answer is not an answer at all, just an implication that
>some group "knows about it."
>
Nope. It's an indication of when someone is stating the obvious.

>So far N2EY hasn't stated anything to prove he knows
>about it, only that he read of it (in ARRL publications) and
>supposedly hams "know about it."

I don;t think there's anything I ccould state here that would prove my
knowledge to your satisfaction.
>
>I have given some examples of use in a posting to another,

>detail large or detail small.

That's nice.

>N2EY hasn't said anything
>specific.

Nobody asked me to.

>Ergo, N2EY hasn't really "mastered" anything
>except trying to get other folks to believe he "knows"
>something.
>
Faulty logic, LHA.
>
>>> I've never made any sort of claim to "having mastered a
>>> Smith Chart" or anything else in radio-electronics.
>>
>>Irrelevant.
>
>No, it is very relevant..

Why?

>.just as N2EY seems to think that
>a couple of degrees is very relevant...without stating much
>at all (and that old information) about what he has done.

I see. You think BSEE and MSEE aren't "relevant" to a discussion of
"credentials" in radio.

>N2EY stated that he had "mastered the Smith Chart."

Nope. If yer gonna use quotes, get the quote right.

I even posted the dictionary definition for ya.

>But N2EY can't talk in detail about it except to say "we
>know."

Sure I can talk in detail. Nobody asked me to.

>Phony.
>
Not me. I'm the genuine article. WYSIWYG.

>Hint: CATV has advanced much in the last two to three
>decades, both in frequency span and techniques. Of course
>all of radio has also expanded since then.

We know, Len.

Y'see, you just made statements about CATV and radio that are obvious to
anybody who knows anything about the subject. But it's not clear to me what
your point, if any, was inmaking that statement. So it appears you are either
just stating the obvious or trying some sort of insult, as if to say the work I
did 25+ years ago is somehow irrelevant today.
>
>>> I'm
>>> competent in some areas, still learning in other areas.
>>
>>No "Extra right out of the box" yet, huh? ;-)
>
>Tell me why I should bother. Why should anyone bother?

Because for many people, ham radio is fun.

But you seem to have missed that, Len. To you, it's all about arguing and
insulting and calling hams who disagree with you funny names. From what I can
see, anyway. There's no Len Anderson ham radio website, no articles in the ham
radio press, no commentary or help on other newsgroups, nothing but your rants
here.

Really rather odd, come to think of it.

>Some amateurs sneer at professionals while being quite
>ignorant of the rest of the radio world, will not accept pro
>experience as being "relevant" to amateur radio.

>
>>You have made it clear that "amateurs" have no credentials unless they
>>are also professionals.
>

>Highly incorrect again. Why do you make up such stories?
>
It's not a story, nor is it incorrect. It's an observation I have formed from reading many many of your posts here. Am I not entitled to have an opinion?

>I cite professional experience for the simple reason that
>professional experience in radio-electronics has been most
>of my working life...

But not amateur experience.

>and that included 24/7 HF communications
>trans-Pacific almost a half a century ago.

You were on the air 24 hours a day, 7 days a week back then? All by yourself? Cool.

>But, according to
>some "critics" in here, that "doesn't apply" because it was not
>amateur experience...and "no one" can have any "amateur
>experience" without the amateur license. One in here
>expresses the opinion that those who don't have a license
>don't know anything at all about amateur radio...continually.

Who are these unnamed persons?
>
>If "no one can know anything about amateur radio without
>a license," how can anyone know enough to even think
>about entering? Explain that.
>
Who said:"no one can know anything about amateur radio without a license,"? Not me.

Provide the post where they said it.
>
>>Just like YOU are free to call people names and make fun of their
>>professions.
>
>Yes, I AM free to do that...but I only do it in response to
>others who started it first.

When did I ever call anyone a name, or make fun of someone's name or profession? You have done those things to me without me doing them first.

And using the "he did it first" defense is something good parents don;t accept from a four year old. ;-)
>
>N2EY wants to fault others for replying in kind, which
>conveniently overlooks the fact that others are far more
>unkind and denigrative than I.

Who is most unkind and denigrative is a matter of opinion. You want your opinion on the subject to be one that rules me. Doesn't work that way.

But you have missed the point. I used YOUR past behavior towards others and me as an example of how YOU could be expected to behave towards me in the future. It's clear you don't like that.
>
>>Translation: You want to post here but don't want me to point out when
>>you make an error.
>
>Sorry, but I don't recognize manufactured errors that are
>not errors at all...and N2EY has done that on the AH0A
>statistics.

Nope. The errors were YOURS, Len. Shall we dig up the old posts?

Does a current Technician licensee with a CSCE for Element 1 have any HF amateur privileges? Yes or no, Len?
>
>>You want your posts treated as absolute fact and
>>revered by all who read them.
>
>I state many things. Some of them are opinion. Some
>are statements of fact about referencible subjects which
>are mentioned. My statements are just statements, not
>pronouncements made by the fundamentalist radio
>amateurs from some temple of ham radio that was

Ah - "fundamentalist radio amateurs" - a typical LHA backhanded insult. Nice try but no cookie.
>
>>I don't know. How do you think YOUR comments look? ;-)
>
>I don't look for love (through statements) or anything else;
>statements are debate, discussion, argument about the
>subject.

In your case they include making fun of people's names, appearance, nationality, callsign, and profession, too.
>
>How does N2EY think K4YZ's postings look?

>How about
>the website author of "No SSB International"?

Some of them are almost as bad as your rants, Len. Your spelling is better, though ;-)

But the point is simple - you respond to me as there is no difference between me and others. You lump all who disagree with you into a group ("jackbooted thugs", "fundamentalists", "rabid PCTAs"). That's called bigotry.
>
>Better yet, what does the FCC think about the postings
>of all those fundamentalists that wrote in response to
>988-143.

Do you think the FCC reads rrap? I don't.

>N2EY implies being privy to everything the FCC
>does...

Nope. Not at all. I just express opinions of what FCC actions mean.

>>You did? You previously said you'd never claimed to be a master of
>>anything.
>
>About N2EY claims of "mastering the Smith Chart."
>
>Try to stay focussed here.

You're not my boss or my teacher, Len.
>
>>LHA wants to be the judge. No one else can have an different opinion.
>
>Anyone can have a different opinion on the SUBJECT.

Then why are you so hostile when presented with one?
>
>N2EY is misdirecting things towards the person again.
>
>N2EY said he "mastered the Smith Chart" but cannot say
>anything definitive about it other than "we know."

Sure I can. Nobody has asked me to.
>
>>Where have I said that? The subject is YOUR behavior. You keep trying
>>to point the finger at others.
>
>Tsk, tsk, all along it was about "mastery of the Smith
>Chart" originally stated by N2EY.

Nope. But you don't stay foscused on anyhting that proves you wrong. Just my
opinion ;-)
>
>>LHA seems to think that it is honorable and good to make fun of other
>>people's names and professions.
>
>N2EY isn't a name at all (unless made so by court order).

It's a form of identity.
>
>N2EY indentifies himself solely by callsign in his "signings"
>and in AOL mesage identification.

Nope. I use my first name, too.

> Anyone trying to debate
>by using a surname "Miccolis" makes him hostile.

You're the only person I've encountered who playes the surname game, Len.

>Why?

It's rude, that's why.

>N2EY wants to shift the subject to "misbehavior" of another
>in order to avoid saying anything definitive about what he
>claimed to have "mastered" other than morse code.

Nope. I mention your behavior as one reason why I don't talk about my employer.
You never said you wouldn't insult my job.
>
>Now, what can N2EY say about the Smith Chart that he
>claimed to have "mastered"?

I see. You want me to "prove" that I know how to use the Chart? Now why should I do that? Your approval means nothing to me. And your behavior here has me convinced that nothing I could post here would convince you of my Smith chart knowledge. You'd just find a way to make fun of me or my post. (That's an opinion, btw).

I'll post some Smith Chart stuff anyway, though.

N2EY

The Warren Commission's report remains the most believed.

> Nor does it take a genius to understand that someone setting up a

Genius, no. Imagination, yes.

> Oswald himself might have thought he was the killer, when in

That's right. One cannot even completely rule out the possibility that
a ray gun may have been fired from an invisible UFO.

> > "The bolt-action, clip-fed rifle found on the sixth floor of the

> that this must be the correct bullet.

Right. That's because there was no evidence of any other bullets or
guns. Seems reasonable to me. The explanation is also the least
convoluted and the most supported by the evidence. That's why the
Warren Report still stands as the best explanation - even after two
congressional investigations.

I am staying in Manhattem, but am working at the Red Cross
headquarters in Brooklyn, there is a great deli at the end of my
block, I'm roughly 6 blocks north of times square, Carnegie Hall is on
my block, am going to walk around Times Square tonight, and drop in to
the Harley Davidson Cafe.

I've always loved NYC, but it has been some time since I was here
last, I was amazed at how much they have changed Times Square.

Phil, according to you the FCC maintains a "secret file" with
amateur birthdates. Wouldn't that be "mystery meat" too?

Who? Anyone who states something about technology
without talking details of that technology. One example
is "mastery of the Smith Chart." A long ago example is
the "former army colonel" whose son was supposed to be
"behind the lines in the Gulf War sending intelligence
information back using CW." :-)

>This would seem to be a back-handed way of calling that person a liar.
>What proof do you have of this?

Someone who claims "mastering" something who cannot
talk details about the the something is SUSPECT.

The biggest is the continual statement that morse code
skill is necessary and vital to demonstrating to the FCC
that examinees should be granted an amateur radio license.

That's a widespread SNARF held by fundamentalists (who
are also "status quo-ists." :-)

Oh my, so close to E56th and E57th Street. Forget the Russian Tea Room..Too fancy and highly overpriced. Besides if you're not a "face" they stick you with the tourists upstairs. The Deli you're referring to is the of NY Deli..great in its time but now a tourist place. At the corner of 57th and 5 is Wolf's yummmmm huge sandwiches and well priced. In fact they overstuff them so much you should take them back to the hotel for a late night snack. Some other great places on 56th as well

Disney changed Times Square although just down the street is Tads Steakhouse. Not the best piece of beef you'll eat but good and well priced.

Remember wallets always in the from pockets on the subway. Cellphone never on your belt unless under a jacket. Get a MetroCard, it's cheaper than tokens

and always remember, you can work CW from a NYC hotel (that's the shot at Lennie) and NYC IS the greatest city in the world. A town so nice, they named it twice New York, New York

Oh yes, the 2 dogs and a soda (or pop as you Ohioians call it) for $3 can't be beat.

Go Cleveland...go Brownies

a transplanted Clevelander (from the east side of town)

You are the individual with the seeming fixation (and lack of
understanding) as to why State would use CW as an order wire.
You trot the story out periodically as a reason why I'm not a Leonard H.
Anderson supporter.

> This particular thread was started by someone who loves
> conspiracy theories.

I have no idea what that is supposed to mean.

> Perhaps Heil thinks that advocacy of eliminating the morse code
> test is part of a giant conspiracy theory to humiliate Heil?

I don't feel humiliated, Len.

> Clue: It isn't a theory. There is no conspiracy.

I never thought there was a very organized conspiracy. I'd hardly
consider NCI organized.

> Is amateur radio made attractive by taunts and jeers and insults

Since you seem to have mastered (see Webster or Random House for a
definition) arrogance, being bossy and using bullying tactics, perhaps
you'd like a shot at answering your question. Rely on this, Len. You
are not taunted and jeered because you have experience in "other radio".
You are taunted and jeered because of your uniquely unpleasant manner.

Dave K8MN

Such stories are phoney only if they are untrue. I'm satisfied with my professional qualifications and the only amateur radio qualification I need is that I passed the Extra Class exam. I have a license to do what I want to do.

> Does Heil need lessons in how to use a Smith Chart?

No, but thanks for the offer.

> I can show how to use one effectively. Anyone else who
> has used Phil's Wonderful Diagram will know that I know.
> No problem except to those poor souls who are offended

I don't know of anyone who has been offended because you know how to use a Smith chart. It doesn't even raise a blip on my radar since I could care less whether you know it or not. Your demands of N2EY to provide proof that HE knows how to use it are ludicrous.

What is your obsession with this thing, Len?

> >I just finished a homebrew duoband 12/17m yagi using the para sleeve
> >design. I optimized it using YO. It goes up tomorrow. Need I prove it
> >to you before using it?
>
> No. Are you worried it won't work? :-)

It already works but I'm not going to prove it to you. You'll have to
tune your receiver at random on the 12 and 17m bands to find out.

> This isn't about knowing antennas or how to erect them, it is
> about erecting strawmen by saying they have "mastered"
> something without revealing a single item of their being able
> to use it.

I mastered the use of YO and mastered reading. I designed and
fabricated my antenna. I didn't just erect it. You'll have to take my
word for it.

> Keep on making the erections, Heil, you seem to like that.

Yes, I do. Don't you?

How did we get on that subject again? Back when you were calling Jim a liar, the discussion was about RF and your behavior. Don't you want to talk about that anymore?

There is a huge difference between "cannot" and "will not".

> Someone who talks in some detail will demonstrate to others
> knowing about the subject. MANY others. A Smith Chart is
> rather well known to those who have worked in RF matching

It doesn't bother me in the least that others have more experience than
I have. There will always be someone who has more or different
experience. You seem injured that no one seems to treat you with
deference because of your Smith Chart knowledge. Sorry, Len.
Whoop-te-doo.

You're not even a newcomer to amateur radio. You'd have to be newly
licensed for that to be. You aren't a good op or a bad op. You're not
any kind of amateur operator.

> >Many of your "statement" are issued from on high to mere radio amateurs.

>
>But I guess all of that is not relevant, according to LHA.

Especially since I bet it didn't take you 15 years of classroom work to
get.

>I see. You think BSEE and MSEE aren't "relevant" to a discussion of
>"credentials" in radio.

Were YOU runing a KW RTTY net for the Army in 1950-something, Jim..?!?!

I thought not...there ya go! No relevant experience!!! (Ducking for
cover!)

>>>No "Extra right out of the box" yet, huh? ;-)
>>
>>Tell me why I should bother. Why should anyone bother?

Why should you do ANYTHING you said you would, Len? You have already
proven yourself INCOMPETENT in matters of Amateur Radio practice and policy, so
we really have no expectation that you'd do what you SAID you'd do.

You can't. You won't. You're not capable of doing it in either case.

>>Some amateurs sneer at professionals while being quite
>>ignorant of the rest of the radio world, will not accept pro
>>experience as being "relevant" to amateur radio.

All of the radio hobbyist periodicals out there are authored BY Hams....On
the other hand, I don't know of any radio hobbyist periodicals authored by
ALLEGED "professionals" such as yourself, Lennie.

>>I cite professional experience for the simple reason that

>Cool.

Which would explain the obvious burnout and arrogant attitude at this late stage in life...AND the gross confusion.

>>But, according to
>>some "critics" in here, that "doesn't apply" because it was not
>>amateur experience...and "no one" can have any "amateur
>>experience" without the amateur license. One in here
>>expresses the opinion that those who don't have a license
>>don't know anything at all about amateur radio...continually.
>
>Who are these unnamed persons?

That would be me...because Lennie has DEMONSTRATED his lack of awareness of present-day Amateur practice AND policy. Repeatedly.

>>N2EY wants to fault others for replying in kind, which
>>conveniently overlooks the fact that others are far more
>>unkind and denigrative than I.

I see.....Others (me) take you (Lennie the Licenseless) to task for your lying and snide remarks, which in turn make it OK for you to treat Jim that way...?!?!

Have I got that right...?!?! Because if you haven't noticed, he only refers to you as "Len" or "LHA", both of which are signatures YOU have signed yourself.

Which, of course, leaves you loking ever the fool.

>Does a current Technician licensee with a CSCE for Element 1 have any HF
>amateur privileges? Yes or no, Len?

Don't forget the Extra Class Only Color Burst Crystal Controlled CW Transmitter one, Jim......

>Some of them are almost as bad as your rants, Len. Your spelling is better,
>though

ffooooooie! =)

>>N2EY indentifies himself solely by callsign in his "signings"
>>and in AOL mesage identification.
>
>Nope. I use my first name, too.

This is cute...Lennie chastising Jim for signing his callsign a the end of posts in an Amateur Radio related newsroup...What's wrong with this picture..?!?

Of course we could equally chastise Lennie over "LHA" at the end of his...What's this...?!?! The callsign of a Norwegian LORAN beacon?

Lennie is dying. Slowly...bitterly...ungracefully...Pity.

You left a really important part of this whole thing out during your response to most of this, Dick. The words "to me." The Briton's reasoning was more believable *to you* than the Warren Commission. Why don't you allow for other peoples' opinions? Why do you seem to have the opinion that, if someone doesn't necessarily subscribe to the way you think and the sources of information you prefer, any other opinion and source than yours is quite in question?

This is a WAR, idiot. We, as the invaders, want the people to turn
against the Taliban. Psyops is an extremely important part of this.
Most Afghans are illiterate; leaflets would have no effect. Afghanistan
is cut off from the outside world; batteries are nearly nonexistent. So
a wind up radio as a means of broadcasting propaganda to the Afghan
people is a great idea.
>

Look. In a war, there is no attempt to be fair. We want to win, and we
do this by the best means possible.

Yea, but the missile theory makes good reading in those grocery
store rag mags and on web sites for those who are gullible enough
to believe them. It give those alarmist something to talk about.

Doncha just luv it? Loosie Lennie claims mastery of the Smith chart but
has no venue whatever with which to use it....and never will have. What
good is it to sort out antennas and feedlines for an imaginary radio
system for which the sorter has no use whatever???

You obviously don't understand the purpose of propaganda. It's to influence, not to
create
super-objective world citizens.

I'd be upset if my tax dollars went for general-coverage receivers that gave
the Taleban more listeners. It would be analogous to saving $10 on tires, but
on tires that are far more likely to blow out and flip you over. Some bargain. :)

Concha just luve it? Loosie Lennie claims extensive experience and seeks to prove it with reams of information which anyone without any hint of training or experience could glean from the 'net, and yet he has NO means whatever of putting any of all that alleged knowledge and experience to use. What a creep. Most technically inclined individuals who have retired would either get into it as a hobby if they wished to continue a personal invlovemnt, or just forget ant do other retirement things if not. Evidently his only joy in life is in futilly attempting to convince licensed radio amateure that he is more competent and knowledgable than any of them, despite his lack of interest enough to involve himself in any way in their hobby other tnat as a terminal critic of every aspect of it. NOT his hobby, theirs. What a creep.

Oh I understand that, but YOU don't understand how stupid it sounds to have to use Propaganda to tell these people how bad the Taliban are. If they are so bad, I'm sure they would know, right? Perhaps letting them become super-objective world citizens would be a better idea so that they don't turn out like war hungry americans.

> I'd be upset if my tax dollars went for general-coverage receivers that gave
> the Taleban more listeners.

Aha, why are you afraid of people listening to their side of the story? Censoring is usually because you don't want anyone to hear the truth.

You should be outraged that you have to pay tax for ANY radios that go to other countries. Before 1913 there was NO FEDERAL INCOME TAX in the USA. We did fine without it then, and can do fine without it now. If the government followed the constitution, tariffs and

excise taxes would be more than enough to fund the federal government.

I dunno. I do know that there may be lots of folks with the same name as me,
but there is only one N2EY. And I also know that in ham radio reflectors and
NGs a callsign is the typical way of identifying oneself.

Calling someone by their last name only in a culture of first names and
callsigns implies many things, none of them respectful or friendly.

73 de Jim, N2EY

Oh yes...classic...He was on one of his usual rants about a non-ham being "knowledgeable without being licensed" rants, and making light of Extras using a colorburst crystalled CW rig for thier exclusive benefit...Problem is a c/b crystal is NOT wholly within the extra CW subband. Again...lack of situational awareness.

>> ffooooooie! =)

Yes, I would mind. But if you truly cannot understand the
connection, I would be glad to describe how that applies to the
mentality behind the specific sentences quoted and replied to.

No need to - we have the Democrats, and our own press, to do that. ;-)

> with this picture?

It's part of advertising brainwashing. I had a customer the other day asking for a battery for her cordless phone. I showed her a battery that was an exact replacement for her phone. She said that it didn't say "Uniden" on the label, and a tag stuck on the phone suggested replacing with a Uniden battery. She wouldn't take any other brand. What's bad is that I'm seeing stuff like this every day. People want Sony batteries for Sony phones, Panasonic batteries for Panasonic phones, etc. (And most of the batteries are made by one or two companies.) It's the advertising, I tell ya, it's the advertising. (And it seems to be working.)

It always amazes me how convinced Americans are of their own ability
to objectively hear all sides of a conflict, but are always so certain
that others elsewhere in the world cannot. Those same Americans are
equally convinced that we do indeed hear all sides in a conflict -
that the government does not apply that same concept to us, with equal
censorship of our news. Of course, they have no room for doubt during
this conflict - news networks are widely reporting today that the
White House has asked them to censor statements made by the Taliban.
Seems the government has moved us into the same category as others
around the world - like them, we cannot handle a free press.

The exact phrase was "has mastered, and uses, both the Smith Chart and Morse Code".

Try looking up what "to master" means, as a verb.
>
>Is this "mastership" still present?

I still know how to use both, as well as ever.

>On both topics or just one?
>
Both.

>True mastership is evidenciary by demonstration of knowledge.

I'm on 40 meters quite often. 7005 and 7035 kHz are favorite hangouts. AC6XG, K8MN and others have heard and worked me on that band.
>
>Such mastership is NOT demonstrated by fish-story claims.

I'll put on the 100 watter if you can't hear my K2.

So? Does it simulate transmission lines or not?
>
>The NEC-based programs are for analysis of antenna
>electromagnetic field patterns.

I mentioned EZNEC - EZNEC2000 to be specific. It can it simulate transmission
lines, and eliminate the need for Smith Chart use.
>
>The NEC-based programs are NOT Smith Charts in any form.

Nobody said they were. The challenge was to name software that eliminates the
need to use the Chart.
>
>The NEC-based programs derive the impedance/admittance
>of antennas at their feed-point as part of the overall
>Numerical Electromagnetic calculations and present that
>data as part of the analyzed antenna characteristics.

And they simulate transmission lines and lumped-elements, too.

Try a free download of the demo version. It's fun.
>
>A Smith Chart may be used with antenna analysis data to
>solve problems of matching, to gain insight into broad- or
>narrowband performance.

I know. I knew that 30+ years ago.
>
>A Smith Chart does NOT show antenna electromagnetic
>field characteristics.

Nobody said it did. The challenge was to come up with software that eliminated
the need to use the Chart, not to simulate antennas.
>
>N2EY may "reply" by saying "we know that," but attempting
>the foolish analogy that he did shows only that he has NOT
>demonstrated any knowledge on the subject.

Just the opposite, Len. EZNEC2000 can simulate transmission lines, and in so
doing eliminate the need to do Smith Chart calculations.

A British ham has written a number of freeware programs that do similar things.
I like his DIPOLE1 and VARNEY because they analyze the antenna and feedline
simultaneously, and fast. No Chart needed at all.

That's not a lie. It's an opinion.

Calling it a "lie" shows that the person doing so has no tolerance for differences of opinion, and wants them silenced. (Lies are not protected speech, but opinions are). Intolerance of other opinions is a primary feature of fundamentalism.

Nobody has to do that. In the USA, almost any opinion can be expressed. Every four years there is an organized attempt to "overthrow the government" - it's called an election. The losers are not killed, imprisoned or exiled, though. (They become consultants).

The other night I went by a group protesting the bombing and President Bush's handling of the situation. The protesters were peaceful, and while unpopular, they were not harassed or thrown in jail. Do you think anti-Taliban protesters in Kabul would be treated the same way? I don't.

The Bay-Gen idea is excellent.

Jack Webb made a documentary in the 1950s.
The theme was Liberty requires Eternal Vigilance.
Today's liberal Democrats would have the movie banned
as politically incorrect and prohibit its showing in our
schools.

In the movie, Webb asked the question, "What if we
woke up one morning and were informed by the media that
the federal government has suspended the Bill of Rights and
other Constitutional guarantees? All for the sake of
security, of course. Looking out our window, we would
see national guard troops patrolling our streets. A knock
on the door would be from federal bureaucrats, wanting to
do a "routine" search for "security" reasons.

Look around. We thought Webb was a little wacko at
the time. Do the conservative talk show hosts and conservative
radio shows seem so far out now?

Buy guns, while you can still get them. Look for gun
sales to be suspended soon, of course, for "security reasons."

I didn't expect you or anyone else to just automatically adopt my viewpoint because I have done so. It evolved over time as the result of various inputs processed, sorted and analyzed. No one should ever expect everyone else to alter their own viewpoint on the basis of his own experiences.

Dick

Yes, and that fact serves to emphasize the lack of any hint of human
consideration exercised by the terrorists, and why they must be
eliminated.

Which chillingly illustrates the ignorance of the masses of consumers.
You have to wonder what else they will swallow without question.

We *could* jut go back to the way everthing was on Sept 10 and let the screwball have his way with us.
If you feel threatened by all this "protective activity" there are many places in the world where it still isn't found.....

And for your enlightenment, this is not the first time. WW2 saw a lot of it, and somehow we stood back down to 'normal' status afterward. You think we can't do it again? I think we wouldn't have it any other way.

So WORRY, folks... I'm not about to. I spent some real time in the
middle of NATO, and if they aren't our friends no one is.
The worldwide terorist threat is something we can't handle alone, and
you wouldn't want to pay the bill for doing it if we could.

5595. Fun With The Smith Chart

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-12 16:06:30 UTC
From: n2ey@aol.com
Message-ID: <9f4bfe89.0110120806.3d3ec63c@posting.google.com>
Source record: 21838

The Smith Chart is a specialized form of graph that helps in the solution of many types of electrical design problems involving complex impedances. Radio amateurs find it useful in the design and analysis of transmission line and matching systems. Using the Chart requires only some basic knowledge, copies of the Chart, and some drafting tools. A drawing compass, straightedge and sharp pencils are most useful. Images of the Chart may be seen at various websites by searching Yahoo! on the words "smith chart". Note, however, that the Chart itself is copyrighted and must not be reproduced nor published without permission.

The Chart's apparent complexity comes from the fact that it is a graph made of circles, or parts of circles, rather than straight lines. The Chart itself is circular, and represents a half-wavelength-long transmission line. The Chart is bisected by the resistance axis, which is a straight line. This axis can be thought of as a circle of infinite radius. I learned to use the Chart with the resistance axis oriented vertically, with 0 (dead short) at the top and infinity (open circuit) at the bottom, so all following descriptions will follow that convention. A copy of the Chart is of great help in understanding the following descriptions.

The Chart is printed with two families of circles (actually, parts of circles). The resistance circles are all centered on the resistance axis, and have one side tangent to the bottom of the chart (the open circuit point). Resistance circles are all complete circles. The reactance circles (actually, parts of circles) are to the right and left of the resistance axis. The reactance circles to the right of the resistance axis are for positive (inductive) reactances and the ones to the left are for negative (capacitive) reactances.

The outer circumference of the Chart is calibrated with a wavelength scale and a transmission/reflection coefficient scale. There are also auxiliary linear scales to the side to aid in determining certain quantities such as reflection loss. The exact center of the Chart is referred to as "prime center". Plotting impedances on the Smith Chart is simply a matter of finding the correct intersection of a resistance and reactance circles. Although the Chart represents only a half-wavelength of line, it may be used with lines of any length by simply subtracting an integral number of half waves until the resulting length is less than one-half wavelength.

Most published versions of the Chart are drawn based on a 1 ohm system - that is, a theoretical transmission line system of 1 ohm impedance. Any other system impedance may be accomodated by "normalizing", which

requires simply dividing the actual impedance values by the system impedance at the beginning of the problem and multiplying the answers by the system impedance at the end. Angles, SWR values and wavelengths are unchanged by normalizing. Special versions of the Chart, meant for specific impedance systems, are also available.

Sample problems and solutions to follow.

Don't get your knickers in a knot, Dwight. The idea is to keep the
terrorists from using our own media as their message forwarding
mechanism, and the several news outlets I've watched regularly seem to

agree that is a wise move, considering that we supplied the cruise missiles used by them on Sept 11. All they need was the pilots.....

Dick

BTW, this *IS* war. You do know about war, don't you???

Some rights are shoved aside in times of a national emergency. eg.
Internment camps for Japanese Americans during WWII. Of course those rights
were restored. The big deal is if they are not restored.

Lost incomes/jobs/businesses while the Japanese were interned
is certainly not a small deal. Their constitutional rights were
suspended during WWII.

Some people should constantly check their pulse to see if they are dead yet!
I can't beleive that there are people complaining about the US government
spending money on radios. I think it's a great idea. The Afgans have been
media silenced for years. An uneducated society knows only what they are
told. This is a smart and strategic method of getting other unsurpressed
information to the Afganie people and to educate them as to what the rest of
the world thinks and is doing!

If they were dropping shit instead of radios, there would be those who would
complain that the others are getting their undigested fibre out of it.
It takes all kinds!!! Don't be an idiot!!!!!!

Oh, another one who thinks there is a difference between a Republican and a Democrat. It doesn't matter if we have a BUSH or a CLINTON in control, same shit! BOTH are war hungry and drop bombs on other countries, BOTH raise our taxes, BOTH continue to sign new laws taking away yet more of our freedoms.

Last election, there were 48 other political parties, at least 6 or 7 of which were on the ballots. Yet for some bizarre reason, people keep voting for the same Republicats that continue to screw us over.

Pick one of the others for a change, you have nothing to lose! If one of them screws up, pick another one! But DON'T pick a party that we already know is corrupt and screwed us over time and time again!

You fell for that excuse, huh. They can use their shortwave radios to hear messages from countries that don't censor that side of the news. This is just because the American government doesn't want it's citizens to hear both sides and find out which one has better points and makes more sense. All we see is Bush and Clinton on TV, never Saddam or Osama. The same is true over there, all they see is Saddam and Osama, not Bush or Clinton. Get it?

> and the several news outlets I've watched regularly seem to
> agree that is a wise move,

Of course! The media of any country is controlled by the government! If they refuse, then no license renual or deal to buy more stations from the FCC.

I don't think it was a secret. What took you so long to figure it out. For someone on a SW newsgroup,
it doesn't seem like you listen to the news as reported by other countries to get a full objective as
to how things really are, rather than just the one sided view of the biggest terrorist country in the
world.

>same) if you don't publish the specs.

After three rounds of e-mail, the gist of it from my side being "do you want me to publish this on the SBE and SCTE sites so that a hundred thousand engineers know that you won't provide cable specs", WanLung finally sent something that made sense if one thinks like they do.

They claim to be an OEM-only cable manufacturer to customer specs, and to have a non-disclosure arrangement with their customers for all their cable. They hold that it's up to the end-user to contact the retailer who will contact the entity that ordered the cable to get the exact specs of the cable used in that application. In addition, they claim that "renegade" cable manufacturers (i.e. other Taiwanese and Chinese manufacturers) often duplicate their markings. (Uh-huh...)

Anyhow, I used my trusty Xacto knife to circumsize the cable sheath and determined that the cable in question was NOT the quad-shielded RG-6u required for my application.

Goodbye, Wan Lung. ..._._

You most likely also think the Federal Income Tax is a good idea too. Hey, why not get a second job so that we can send them TVs and DVD players.

> The Afgans have been
> media silenced for years.

And as your statements show, so have Americans.

> An uneducated society knows only what they are
> told.

Wow, you knew that, but believe you live in the greatest country in the world, right? Our health care is the best in the world too, right? How do you know that, because you have experienced the others, or because that is what the US media keeps telling you over and over again?

> This is a smart and strategic method of getting other unsurpressed
> information to the Afganie people and to educate them as to what the rest of
> the world thinks and is doing!

No, ONLY to what the American broadcasts have to say. That is why the radios are tuned to one frequency as to censor the broadcasts so they CAN'T hear what the rest of the world thinks.

I disagree that Clinton and Bush are the same, or would react the same.

I also strongly disagree in your statement about being "war hungry".

In case you didn't notice....we were attacked. On our own soil. The target chosen was non-military, consisting of civilians from all over the world.

This can not go un-punished. If you think otherwise then I call you a traitor, and have no right to claim US citizenship.

Dan/W4NTI

Yep...although I didn't have to take one when I got my Technician
class license...only when I upgraded to General. I did have to take
two written tests instead of the current single written test for
Technician, but I won't hold that against you if you get your Tech
under the new rules. ;-)

Uh, I think if you'll check, you'll find that the UN doesn't own any planes. Not even a black helicopter. And the NATO planes involved are AWACS, airborne listening posts. Not a weapon aboard.

Yeah, I know that UN planes are actually those of member nations, just as NATO's. Big difference in that and NATO member nation planes. All NATO are friendlies, UN maybe not.

So you never learned the Smith chart. And that is all what Jim said in
an earlier post, while LHA insisted that he "prove" that he (Jim)
actually does know how to use the Smith Chart.
Actually, being able to use the Smith chart is a very useful skill, if
it is one that isn't often necessary today. The fact that there exists
more modern means to work such problems doesn't change that.

Relax, Walter. It was a joke. Didn't you seen the joking "wink" face
at the end? And I'm not taking sides - if there was a Democrat in the
White House, I would have said Republicans instead. But, since it is a
Republican in the White House, it would have been absurd to use
Republicans in my comment, wouldn't it?

> them on Sept 11. All they need was
> the pilots.......

I really don't care what the "idea" is. The only thing I'm concerned about is that my government is openly controlling my access to information. And, as a free citizen in a supposedly free country, I consider that a very frightening thought (something I thought only "those" other countries were supposed to do).

> BTW, this *IS* war. You do know about
> war, don't you???

Yes, Dick, I've seen this country involved in nine of them (wars) in my lifetime (not counting the "cold" war). And, to be perfectly honest, I'm getting darn tired of it.

Why use NATO aircraft to patrol the skies of the United States,
Dick? Don't we already have AWACS aircraft for that purpose?

When battery packs consisted of a few cells plus a Raychem or pepi protector, the floor sweeping battery packs were fine. Now that high end battery packs have chips in them, the second sources really need to be qualified before purchasing. While smart batteries may last longer, reach full charge faster, etc., the real smarts in a smart battery is the difficulty to duplicate them.

A semi-smart battery pack, such as those with a thermistor in them to sense overcharge, can still be a problem for second sources to duplicate. An overseas vendor may get all the right components, but do something wrong like put too much kapton around the thermistor, or mount the thermistor in the wrong place.

Even seemingly simple battery packs that just consist of cells and wire can be copied poorly. A certain battery from China has much higher self discharge than the Japanese brands.

>
> I also strongly disagree in your statement about being "war hungry".

You disagreeing doesn't change the fact that they are true.

Example: "I disagree that George W. Bush is President." See? Makes no sense.

> In case you didn't notice....we were attacked. On our own soil.

In case YOU didn't notice, we attacked them first, on their own soil. They retaliated the best and only way they could considering their far inferior military and technology. What did they do to us before we started dropping bombs on Iraq, denied them any food or medicine for over a decade, and won't allow them to fly planes over THEIR OWN COUNTRY AND AIRSPACE? They are tired of the big bully picking on small weak countries and got together and tried to teach the bully a lesson. Too bad you can't see that and instead see this as an attack on us for no reason at all.

> The target
> chosen was non-military, consisting of civilians from all over the world.

They got the Pentagon and were trying for the White House. Again they don't have the military and equipment we do, so they did the best and only thing they could do with their resources. And don't forget the Schools and Hospitals we bombed in Iraq, those were not military, and WE don't have any excuse because we have better technology, weapons and military.

> This can not go un-punished.

It was a punishment for what WE did! Now we would have been even, but now we are attacking them AGAIN, so now we can expect more retaliation.

> If you think otherwise then I call you a
> traitor, and have no right to claim US citizenship.

Call me what you will, you can't even see what is going on here. You seem to think they just did this to us for no reason at all. Why did they pick the USA? Why not China? Could it be because China did not bomb the hell out of them like the USA did?

I won't argue your points, but my customers gripe when I tell them the phone battery is going to cost them $10. The cordless phone (as opposed to cell phone) batteries I sell are so low tech that they are one step above the usual alkaline cells. They're general purpose NiCads that have been heat shrink wrapped with a label glued on. I split one package apart and found nothing but NiCads and jumper wires. Nothing high tech about it, unless there is something special I'm not aware of with the heat shrink packaging.

I'm wondering where your concern is??? for those interned or the rest of us???.....hell..even the constitution is due for a major overhaul....but I'd rather not join in that debate right nowl........

and for whom are you asking that they be restored??...I would image that yes, they of course be restored but then you'll never konw.....let just wait and see what happens as in the future posiible threats are carried out........and by whom???....college students?....cells???....who???..this may very go down in history at the time when the entiree system was overhauld.....and what was isn't any more......

Period....do I wish this?...haven't played it out in my own mind enough to see it......but it may very well come to pass....I hope to god we never reach that point.....ot maybe this sort of positig will only scare the shit out of many.....

Here's a story..walked maybe 8-10 miles today back and forth.....from 14th street to 96th....what I noticed is that non one's using the public phones...WHAT WHY???????????

I see on the news that there are at least 80 portable suitcase sized tactical nuclear weapons missing from the former Soviet Union, by some accounts all the 148 that they had are now missing. Where do you suppose they went?

With a little luck maybe one of those troops snooping around your town will catch the nut carrying of one of them before he can set it off.

Oh, we could just protest and raise hell until officials cancel all the
protective meassures and let the terrorists have their way with us.
Lotsa luck getting any 'freedomns' from them.

And in the process you help the case working to separate you from them.
YOU are not what counts, Dwight. WE are.

5662. Re: Fun With The Smith Chart

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-13 11:38:23 UTC
From: n2ey@aol.com
Message-ID: <20011013073823.17640.00000846@nso-cb.aol.com>
Source record: 21905

Problem 1:

A radio amateur has an antenna fed with a length of 50 ohm low-loss coax. The electrical length of the coax is 0.8 wavelengths at the desired operating frequency. The radio amateur uses a home-made Macromatcher (a form of RF impedance bridge) to measure the impedance at the "shack end" of the coax, and determines it to be 30 ohms resistive in series with 32.5 ohms capacitive reactance. In other words, the generator end impedance is 30 - j32.5 ohms at the desired operating frequency. Determine the impedance at the antenna, and the SWR on the line, using the Smith Chart. Neglect line loss in the calculations.

Solution 1:

Since this is a 50 ohm system, normalize the impedances by dividing them by 50. This gives a normalized generator end impedance
of 0.6 - j0.65 ohms. Plot this normalized impedance on the Smith Chart.

Draw a circle, centered on the prime center (exact center point of the chart), that intersects the 0.6 - j0.65 ohms point just plotted.
This is an SWR circle. It crosses the resistance axis at 2.6, which means the line is operating at an SWR of 2.6:1 The drawing compass may be used to verify this SWR reading using the auxiliary SWR scale.

Draw a straight line from the chart's prime center to the wavelength scale, through the 0.6 - j0.65 ohms point just plotted.
It should intersect the wavelength scale at 0.112 on the "towards load" scale (the inner wavelength scale), which is 0.338 on the
"towards generator" scale (the outer wavelength scale).

Since the electrical length of the coax is more than 0.5 wavelength, subtract an integral number of half waves from the coax length.
The result is 0.3 wavelengths of feedline. Add 0.3 to 0.112 to get 0.412 wavelength. On the chart, follow the "towards load" (inner)
wavelength scale counter-clockwise exactly 0.3 wavelengths to 0.412 wavelengths on the inner scale (0.088 on the outer scale)
Mark this point (0.412) on the wavelength scale.

Draw a line from prime center to the point just plotted on the wavelength scale (0.412 wavelengths on the inner scale). Note the point
where this new line crosses the SWR circle - it should be at the intersection of the 0.5 resistance circle and the 0.5 inductive reactance circle. The normalized antenna impedance is thus 0.5 + j0.5 ohms

Multiply the normalized antenna impedance by 50 to get 25 + j25 ohms antenna feedpoint impedance.

Answer: 25 + j25 ohms antenna feedpoint impedance, SWR of 2.6:1

This thread has already pointed up some of things going on in the United States and, more importantly, the United States government.

The actions taken since the tragedy in NYC are those that we will seek to unravel in the future when many come to their senses and realize what havoc we have allowed our government to create in the name of National Security. We may seek as much as we wish, and we may even scream to our government that we only meant that when the immediacy of the situation seemed to warrant it. But I doubt reversal will be possible. I am sorry to seem so anti-American to many of you--I used to hear that in the 60s when this kind of stuff was fought back then, too. Yeah, the Viet Nam war was the focal point of protest back then. But many couldn't see the forest for the trees--it was more a fight against a government that surveilled its citizens and made illegal many of the things called freedoms that we used to know. (How many of you are aware that to put something on a campus wall at a college or university today, requires the signature approval of the Dean of Students?)

We have a government today that is entirely different than it was just a month and a half ago. Yes, we have a world that was entirely different also. Things have happened rapidly and without measure as to its implications beyond the state of fear or anxiety we all in some way feel about the world around us. I am quite saddened by it all; we've come full circle and I can assure you that US Citizens will become the victims of these new and growing "pollicies" designed to protect us from the harms of terrorism. No one dares to raise question about what we are seeing happen in the United States government. I feel squeamish just to do so myself because I know it will be viewed with angst by those who feel this is a war against liberalism, or political correctness, or conservatism, or whatever your game has been for the past few years. Just as the government will use this tragedy as a veil to implement all kinds of really weird and counter-democratic measures; many people of the United States won't realize that their true passion isn't over what happened in NYC--it is over the many years of politics they haven't liked going on.

Usama bin Laden has won this round. He probably doesn't realize it, because his and their intention is to get rid of the United States. He may have done just that but in a way he never realized would happen.

I don't particularly care if those of you who will scream against me for the way I think, go ahead and scream. I don't particularly care what you think of me for the way I think. I am saddened, but I still wake up every day and pretend that everything will be OK--that we won't have US Citizens brought into courts of law for things they say, write, or do in the future; that we won't have a government listening in on all kinds of sentiments they will

deem as anti-American; that we won't continue on with this patriot war we've got happening in our country and around the world right now; and all kinds of other really crazy stuff we are going to see in the news. I go to work, do my thing, get my paycheck, and go to the movies--once in a great while. With the simple life I lead, there's not much harm that will come to me through policies I so greatly detest. This post is probably the most political thing I will do in the next several months. So, go ahead and sneer, call me and others like me anti-American, and make all kinds of innuendoes and accusations. Mark my words--the goings on of today are not going to be so welcomed a year from now.

I choose not to buy an American flag right now because I never chose to buy one before. I choose not to open my heart completely without suspicion to my government because I never did that before. I choose not to be so willing for war because I would not have done that before. I have actually considered but resist the urge to buy guns and ammunition because I've never considered that before. There are lots of things I choose in my life--and lots of things no one will ever "force" me to choose otherwise. That is the best stand I can take against immoral acts of others, whether they are from a foreign government or my own.

I'll leave you with this thought in this thread. I absolutely detest the thoughts of people like those who would wave the flag of the KKK. However, I also bitterly regard their right to do so in this country as precious to the principles of Democracy and a Democratic way of life. Right now, our government and most of us are angry with the bin Ladens of the world--and there are so very many of them. But, what about when "that part" is settled? Do we really want a government that will *have the capability* to make decisions about what its citizens' intentions are in the beliefs they have and *have the capability* to call it "illegal" under some broad speaking measure that we all meant for them to use only on other countries and people--not ours? There is nothing in the measures and policies that have been debated and passed thusfar in Congress, that keeps the government from turning its eye directly onto organizations such as the KKK, abortion rights activists or anti-abortion rights activists, or whomever else they deem as a threat to the security of the United States. Both of those political issues have brought people to the brink of killing others in this country. Nothing stops our government from deeming those organizations as terrorist organizations. Nothing.

Mark my words...

Heh, heh. I have my Post Versalog right here in the desk drawer. It has served me well lo these 40 years. I now use it as a prop for my "Back in the Good Old Days" talks to younger engineers.

And to a certain extent, that's the function of the Smith chart these days. But it's more than just a relic of bygone technology. It also provides a conceptual model for the impedance/admittance transformations that take place through a section of transmission line. As such, its value lies in the intuitive insights it provides the user rather than in the precision of the calculations done with it.

While it is necessary to move forward in technological development, I believe it is also necessary for the practitioners to see themselves as having a certain historical continuity with their predecessors (and their successors). One way this continuity is maintained is to understand fully the thought processes involved in developing the tools and artifacts of that era. Thus the interest in the Smith chart, vacuum-tube radios, slide rules and steam engines.

That's your opinion, Dan is entitled to his.

>and you have no right whatsoever to decide
>who has a right to claim citizenship.

Actually he does, that is simply Dan's opinion to which
he is fully entitled...just as you are to believe otherwise.
In the end, the question of citizenship can only be resolved
through due process.

>And if you think otherwise, then
>I could just as easily call you a traitor to the ideals of this country.

Yes you can.

In the end, I can respect everyone's right to express whatever
opinion they want...however, that does not require me (or anyone
else) to respect that opinion...and, the concept of free speech
fully allows me (and anyone else) to offer opinions as to just
what someone else's beliefs/opinions constitute... from support
for American to treason.

After my post I just made in the "Where did my America go" thread, I rest my case with the sentiments expressed here by Dick Carroll to Dwight Stewart.

How dare you, Dick Carroll, imply that *ANYONE* in this country is a non-patriot because of the way they believe. You are SCUM and you are equal to the hatred of men such as bin Laden!!!!!!!!!

Anyone who has ever served this country in military wars, *ANYONE*, Dick Carroll, deserves better than your spit on them because of the way they think. And equally, *ANYONE* whom they (the military) has defended deserves better than to see someone like you take on the beliefs of another as though they were anti-patriotic. It is exactly your stupidity against another human being that Dwight is fearing will become the normal in this country. I'll tell you one thing--I can ASSURE you that people did not go to war to defend this country for your beliefs.

You, Dick Carroll, are EQUAL in every way to Usama bin Laden!!!!! I spit in your eye. And, it is not for the way you think--it is for your blatant disregard for another human being.

Dwight, for all our differences, I think you have always at least been human. I cannot believe the sentiments I am beginning to hear in peoples' tones across this country. Within a month, maybe two at most, there will be the original great divide of the 60s and 70s with all of us at each others' throats, measuring who is more patriotic and who deserves to "go live with them." It is the Dick Carrolls of the world that make the concept of the United States ever being a truly democratic and free nation such a damned f***ing joke. And you know I don't generally use that language. It is called for here.

Depends on what kind of nukes we use and which way the wind blows.
Theatre nukes you can blow a bunch of tanks to smithereens and have
your own troops on the other side of a hill not even feel the breeze.
Although nukes are not an option politically or militarily in real
life, they are fun for us armchair generals (or more appropriately armchair
REMF) to argue about.

Agreed! In fact, for ham use there are numerous free software packages that let
a designer simulate both the antenna and transmission line system on a PC with
no fuss or bother.

>(note: impedance implies that a complex number is
>involved, so "complex impedance" is redundant),

Good point! I went back and re-proofread my sample problems to avoid that
cumbersome phrase.

> and you can do it much

Yup. I know a ham who bought a really nice sheet of Chart paper and had it
laminated, then did solutions using wipe-off pen. Now he uses a PC.

In most ham radio work of this type, three significant figures is usually more
than enough. But you probably knew that already.

Jim
A nice example. But what method would you use to solve the problem if
the transmission line was not low loss at the frequency of interest?

Too many examples use lossless lines and that can obscure the true
value of a given method. I am a Physicist not an EE - the corresponding
Physics examples are the frictionless puck or the massless spring.
Useful teaching simplifications but not real world.

So many words, so little said. You and Dwight are peas in a pod. One sincerely hopes the pod withered before it created too many of you who fail to understand what it takes to preserve our system of free government. That is, that we all must sacrifice in times of severe external stress, - war. Some of that sacrifice is in how we live and the rules of our society for the duration, for simple reasons. Reasons that help assure our success in fighting off the agressor, whoever he is. This can easily be critical to the outcome.
If you think that the American public sould ever stand still for permanent withdrawal of personal freedom you have a severe misapprehension of determination your countrymen. That was settled at Concord and Lexington.

>> In case you didn't notice....we were attacked. On our own soil.
>
>In case YOU didn't notice, we attacked them first, on their own soil.

When? The Soviets went into Afghanistan in 1979 or so to prop up a friendly puppet government. Our CIA supplied the anti-Soviet rebels, who have now turned against the West.

Maybe the CIA should have let the Soviets have Afghanistan.

>They
>retaliated the best and only way they could considering their far inferior
>military and technology. What did they do to us before we started dropping
>bombs on Iraq, denied them any food or medicine for over a decade, and won't
>allow them to fly planes over THEIR OWN COUNTRY AND AIRSPACE?

I think you've overlooked the invasion and devastation of Kuwait by Iraq a decade ago. The Saudis and exiled Kuwaitis asked for help in pushing back the Iraqi invaders. Should the West have simply sat back and let Iraq continue its conquests?

> They are tired
>of the big bully picking on small weak countries and got together and tried

<JohnASiegel@worldnet.att.net> writes:

>Jim
> A nice example.

Thanks.

>But what method would you use to solve the problem if
>the transmission line was not low loss at the frequency of interest?

The effect of loss in a transmission line is to make the SWR at the "shack end"
(generator end) lower than at the "antenna end" (load end). If the line loss is
known, we can figure out what the SWR at the antenna end is, and draw a second
SWR circle that shows the SWR at the antenna (load) end. The antenna feedpoint
impedance lies on that second SWR circle. Since we know the line length, we're
in business.

However, figuring out the line loss can be complex. The cable loss numbers in
the cable specs are for new cable operated at 1:1 SWR. The loss goes up with
SWR, and since the SWR changes over the length of a lossy cable, the situation
becomes even more messy. The usual method is to do an iterative average of the
load and generator end SWRs and use that value to figure the loss. And even
then you get an approximation.

You can see why I used the lossless case for a first example. ;-)

"The case with loss is left as an exercise for the student".
>
> Too many examples use lossless lines and that can obscure the true
>value of a given method.

Yup. Like the ideal models used in basic circuit analysis.

A story from EE school:

In electronic circuits class, we had Dr. K, who closely resembled Wally Cox.
Excellent teacher, really knowledgeable and practical.

One day he draws a resistance-coupled FET amplifier on the board, asks what it
will do. Everybody says "amplify the input signal". "Correct", says Prof. K.

Then he redraws it to use tuned LC input and output circuits, both tuned to
about the same frequency. Again he asks what it will do. Everybody but me says
"amplify the input signal if it is near the tuned circuit frequency". I say "it
may amplify, but it will probably oscillate". Rest of class thinks I'm nuts.
Prof. K looks at me, smiles, says "You're a ham radio operator, aren't you?" My
jaw hit the floor - I didn't think he knew what ham radio was!

He went on to explain to the class that if the tuned circuit values were correct and the internal capacitances of the FET were adequate, the circuit would indeed oscillate. 'You have to use the right model" he said "the simplified model that ignored Cgd is not adequate for this analysis". Nobody ever forgot his practical examples.

>I am a Physicist not an EE - the corresponding
>Physics examples are the frictionless puck or the massless spring.
>Useful teaching simplifications but not real world.

Yup. I'm an EE not a physicist ;-)

Thanks for the comments.

The Russians have their own Islamic problems, and would welcome reducing the problem.

As for fallout. Time it on a good wind day.

Look Dwight, this is a war between East and West. If you think otherwise then Id suggest you get a fallout shelter. Because the next nuke strike will be coming from the East. And it won't be Russian.

**

EMERGING TECHNOLOGY: FCC APPROVES SDR

The FCC has taken the first steps in making Software Defined Radio or S-D-R a household word. This, as the regulatory agency adopts rules changes to authorize and begin deployment for a new generation of two way radio gear. Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--

The Action took place on Friday September 14th at an open meeting in Washington D-C but the announcement was all but lost in the events occurring in New York City and the Pentagon only three days earlier. But what’s important is that this First Report and Order removes many barriers to entry of Software Defined Radio enabled products to the marketplace. And the new rules do allow manufacturers and operators of such devices to reconfigure them after they have been deployed in the field -- including -- possibly -- ham radio gear. This, says the FCC. will speed up the introduction of advanced technology and new services.

The new rules say that software modifications to an S-D-R can be made through what the FCC calls permissive change. The FCC describes this as a totally new form of filing process where the FCC identification number will not have to be changed nor will the equipment have to be relabeled each time its purpose is revised. In fact, the FCC says that it will permit use of an optional electronic label for S-D-R gear in which the FCC identification number could be displayed using a liquid crystal or similar screen. This will allow another party to obtain an equipment approval in its name and take over responsibility for compliance with operating rules that were the domain of the previous licensee.

The Commission has also adopted requirements saying that the license grant holder must take adequate steps to prevent the unauthorized software modification to S-D-R gear. But so far it has not set up any specific security requirements.

In Los Angeles, I’m Bruce Tennant, K6PZW, for the Amateur Radio Newsline.

--

More information on Software Defined Radio is on the web at several locations. The subscription S-D-R forum is the best. Its in cyberspace at www. sdrforum.org (W5YI Report, SDR Website, ARNewsline(tm))

AMERICA UNDER ATTACK: SATERN SAYS HAM HELP STILL NEEDED IN NYC

The last federal rescue crew left the World Trade Center disaster scene on Saturday, October 6th leaving New York officials to continue the nearly month-old effort to locate nearly 5,000 bodies buried in the rubble. The Urban Search and Rescue Task Force was the last of 20 Federal Emergency Management Agency teams sent in after the September 11 terrorist attacks that collapsed the twin towers, but their departure does not mean work is winding down. In fact, one volunteer agency says that ham radio operators will still be needed there for some time. Amateur Radio Newsline’s Henry Feinberg reports from near the scene.

--

Its the Salvation Army that needs radio operators to support the organization's World Trade Center relief operation in New York City. And even though it has cut one shift of radio operators the relief agency says that it still needs fresh Amateur Radio ham operators on a daily basis until further notice.

In a statement to the ARRL Letter, Jeff Schneller, N2HPO who is coordinating the Salvation Army Team Emergency Response or SATERN Network says that he is still short of people. Schneller says that the midnight to 8 AM shift has been suspended but they still needs six Amateur Radio operators per shift -- a total of 12 per day -- for the indefinite future.

SATERN needs these operators with their own base station radio gear at the Kennedy Airport warehouse set up from about 8 AM until about 9 PM -- possibly broken into shifts. SATERN also needs operators to ride with trucks to provide communication. If you can help, please visit http://www.satern.org for the latest information.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ, 15 miles from ‘ground zero’ in West Orange New Jersey.

--

The Salvation Army said it's sending additional personnel from the Midwest to New York City to assist those who have been on duty since September 11th. In the area of ham radio, so far some 40 Amateur Radio operators have turned out to help support the Salvation Army relief effort with some coming from as far away as Missouri, North Carolina, Georgia and Florida. (ARRL, SATERN, published news reports)

**

AMERICA UNDER ATTACK: TERRORISM ATTACK CUES EAS DEBATE

When should the nations Emergency Alert System or E-A-S be activated? According to the trade publication Radio World, experts are debating that question because the E-A-S was not used following the September 11th terrorist attacks on New York's World Trade Center and the Pentagon.

Richard Rudman, W6TIA, is the chairman of the Emergency Alert System National Advisory Committee. He also chairs the Los Angeles County local E-A-S group. Rudman says that since the incidents that the national committee has recommended to the FCC that changes be made if a similar attack takes place again.

--

Richard Rudman W6TIA: "The Emergency Alert System -- at the local level -- ties into local emergency management. What I am suggesting is that we have to look at the elements of the critical infrastructure that might possibly have warnings based on the current threat and make sure that they are tired into local emergency management properly so that a decision can be made to issue an E-A-S warning if it is appropriate."

--

The question of whether an E-A-S civil warning should have been triggered has stirred strong debate among those subscribed to an on-line discussion remailer. Rudman says that the job of the E-A-S is to alert the public before an actual event occurs, rather than after the fact. He says that with the immediate live media coverage of the strikes on the two locations that the need for an E-A-S warning was lessened.

--

Richard Rudman W6TIA: "First of all, there wasn't enough information to give a clear warning of what was going on. You might as well have just put out an E-A-S message with one word -- 'panic.'"

"At the time that you get a warning you really have to have other information. I often say that our job -- quite often -- is to take people from the fear of the unknown to fear of the known. If you don't do that right, all you are doing is confusing people and possibly instilling panic."

--

Not everyone agrees. Radio World reports some speculation that there was enough time between the two plane crashes in New York that issuing an E-A-S alert might have saved additional lives.

The E-A-S was developed in 1994 to replace the then aging Emergency Broadcast System as a tool for the President of the United States and others to warn the public about emergency situations. But President George W. Bush chose instead to go directly to the mass media and did not issue an Emergency Alert Notification on the day of the terrorist attacks. As a result, E-A-S played no role in alerting the public to the emergency situations. (Radio World)

AMERICA UNDER ATTACK: REPEAL THE ECPA SO AMATEURS CAN MONITOR FOR TERRORISTS

A Michigan ham says its time for congress to repeal the Electronic Communications Privacy Act and lest SWL's monitor the cellular frequencies foe terrorist activities. Lloyd Ellsworth, NE8I, is circulating a letter to congress on the VHF Reflector that says the events of September 11th warrant giving the public the ability to again monitor cellular communications and report possible threats to the nations security onto authorities.

--

Lloyd Ellsworth NE8I: "If you have an area [of spectrum] -- for example 800 to 900 MHz -- where cellphones operate -- a terrorist could also conveniently operate there and not easily be caught. You would have someone specialized who had that [monitoring] equipment to receive him."

--

As Ellsworth's letter notes, the Electronic Communications Privacy Act forbids Americans from using a radio scanner receiver other device from eavesdropping cell phone and certain other radio communications. It also forbids the importation or sale in the country of equipment capable of interception of these signals. But says Ellsworth, these are tools and skills which any knowledgeable terrorist can easily use against America and Americans. And we all know that terrorists don't play by the rules.

--

Lloyd Ellsworth NE8I: "What I am concerned with is if a terrorist is able to freely operate and stands a very small chance of being caught while conducting some communications in that band -- they will."
--

Ellsworth says that repealing the E-C-P-A will even the playing field by giving law abiding Americans a way to listen for suspicious cellular phone calls or other radio signals that can be reported directly to an appropriate agency. Ellsworth notes that this would allow the average citizen, including police and law enforcement to directly to contribute fighting terrorism. Ellsworth adds that this would also put any terrorist on notice that any radio communications he or she may use is likely to be detected, intercepted and used against them. (ARNewsline(tm))

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Radio Club of El Cajon serving El Cajon California.

(5 sec pause here)

**

ENFORCEMENT: WARNING TO FISHERMEN GETS THEM OFF TWO METERS

It appears as if a warning letter was enough to get at least four ham fishing enthusiasts off of the two meter band. This, according to FCC Special Counsel Riley Hollingsworth who says that he has spoken with some of them and those operators are gone:

--
Riley Hollingsworth: “We had warned eight commercial fisherman in Alaska about operating on two meters without a license on the fishing vessel Evack and the fishing vessel Phoenix. Now four of these fishermen have called us or been in touch with us and apparently in addition to Marine equipment they were using amateur 2 meter handie-talkies. They have assured us that they have stopped using the [Amateur] equipment and our independent information indicates that too.”.
--

Hollingsworth says that his office is still waiting to hear from the other remaining radio users. (FCC, RAIN)

**

ENFORCEMENT: DON’T USE HAM GEAR WHILE HUNTING IF YOU ARE NOT A HAM

Fishing vessels are not the only unlicensed users showing up on the ham bands. In many areas it hunting season, and some of those on the prowl using amateur radio are not hams. The FCC’s Hollingsworth says that the agency has now warned four hunters in West Virginia about using unlicensed amateur gear while out hunting. (FCC, RAIN)

**

ENFORCEMENT: VK JAMMER FINED $3000 (AU)

The United States is not the only place bringing radio regulatory violators to justice. Q- News reports that the Australian Communications Authority has successfully prosecuted a man who cost a courier company an estimated $80,000 when he interfered with its two-way radio system.

In an all to familiar scenario here in the United States, the man who is an ex-employee of the company, played music over the two-way channel when the company was trying to pass on information to its drivers. Prosecution came after a long investigation by the Australian Communications Authority which direction finding equipment to track down the offender. He was fined $3000 after pleading guilty in Sydney's Downing Center Local Court to three charges of operating a radio transmitter without a license.

The Australian Communications Authority New South Wales Compliance Team Manager is Tony George. He says that the A-C-A works hard to detect unauthorized operation of radio transmitters. George added that the agency will act quickly to prosecute offenders. (Q-News, ACA)

**

RESCUE RADIO: HAMS CALLED OUT AFTER TEXAS BRIDGE COLLAPSE

Ham radio was called out after disaster struck in South Texas early on the morning of September 15th. This, after a 240-foot section of the Queen Isabella Causeway between South Padre Island and Port Isabel, Texas, collapsed after barges slammed into the bridge supports.

The mishap sent several vehicles plummeting into the water 80 feet below and claimed 11 lives. The Texas Department of Public Safety contacted John Teer, AK5Z, to request Amateur Radio assistance with communications, because all phone lines between South Padre Island and the mainland had been severed.

The ARRL Letter reports that Teer was able to get volunteers to place at the both the South Padre Island and the Port Isabell Emergency Operations Centers. The Department of Public Safety provided boat transportation to the Island for one operator. The hams then provided 2-meter communication for government and Red Cross officials on for two days until landline telephone and cellular service could be restored. Volunteering their services along with Teer were Pat Patterson, N5SLI, Virginia Scarth, KC5SAM, Ed Scarth, W8AHU, and Gregg Sargent, KAZ0ARS. (ARRL)

**

EMERGENCY COMMS: CELL PHONE LOCATOR DELAYED TO DEC 2005

People waiting for the cellular telephone industry to institute automatic emergency locating technology will have to wait some more. This, after the FCC gives some of the nation's largest mobile phone carriers more time to develop technology that allows emergency personnel to quickly locate callers who dial 911 from wireless phones.

ATT Wireleess, Cingular, Nextel, Sprint and Verizon had sought implementation schedule delays based on problems in obtaining the needed equipment from suppliers. The Federal Communications Commission mandated back in 1996 that all cellular phone companies have some location equipment in place and operational by 2002. Its now been pushed back to December 31st 2005. A similar delay was granted to VoiceStream last year. (Published news reports)

**

RADIO RULES: ANOTHER MASS CORES CONVERSION COMING

The ARRL Letter says that before the switchover to the new and mandatory Commission Registration System on December 3rd, the FCC plans to do a mass conversion from its current Universal Licensing System database.

The FCC established the Commission Registration System or CORES last year and has been in the process of implementing it. Once it becomes mandatory, everyone doing business with the FCC -- licensed or not -- must obtain and use a 10-digit F-C-C Registration Number -- or F-R-N.

The FCC calls the move is a first step toward streamlining fee collection and tracking. Many amateurs registered with the current Universal Licensing System were assigned an F-R-N by CORES in a mass conversion last year. Those who got one were notified by mail. (ARRL, FCC)

**

CONVENTIONS: DARA SAYS PLAN EARLY FOR HAMVENTION 2001

The Dayton Amateur Radio Association says that you should plan now to attend the 51st annual Dayton Hamvention. We have this report on the very special reasons why.

--
Dayton Hamvention 2002 is slated for next May 17 to the 19th. And in keeping with President Bush’s call for America to return to business as usual, the planners of the world's largest amateur radio gathering and trade show have sent out an early flyer. A flyer that tells everyone that the show will go on and that it will be bigger and better than ever before.

How do you make the best even better? How about the Hamvention’s new “All You Can Ride Option” advance purchase package. For a $3 additional fee over the price of a normal $17 advance purchase ticket price, show attendees can ride to and from the HARA Arena an unlimited number of times. If you wait till you get to Dayton it will cost you $22 not including bus service. Buying last minute bus rides will cost another $2 a day or $5 for the weekend. So the $3 in advance is quite a deal.

But that’s not all. If you post mark your ticket order before November 10th, you will also receive a limited edition Hamvention 2002 souvenir program. These normally sell an additional $5 at the door. And early reservations also get entered into the new Hamvention Gift Certificate Contest. Here, two ticket holders will be randomly picked to receive a $250 gift certificate redeemable for cash at Hamvention 2002.

For more information write to the Dayton Hamvention, Post Office Box 964, Dayton Ohio 45401. Or you can visit the Hamvention website at www.hamvention.org.

For the Amateur Radio Newsline, I’m Rick Johnson, KA9VZD.

--

Amateur Radio Newsline is already at work planning the Ham Radio Town Meeting for Hamvention 2002. Details on this in an upcoming newscast. (DARA)

**

CONVENTIONS: ELECTRONIC EQUIPMENT EXPO

Don't forget about the annual Electronic Equipment Expo, which has moved to Seattle from Bellevue this year. The dates are October 24th & 25th at the Stadium Exhibition Center in Seattle Washington and admission is free. The event is co-sponsored by Society of Broadcast Engineers Chapter 16. More information and online registration is at www.emexpo.org. (Portland SBE Newsletter)

**

HAM RADIO BUSNESS: THE HAM RADIO MARKETPLACE.COM

The Ham Radio Market located at is an Internet web board focused on radio equipment and "Ham Radio Stuff". According to President and Founder Bob

Hutchinson, N5CNN, it is operated as a public service for the ham radio community by the Wireless Industry Association which does not itself buy or sell anything. For more information visit http://hamradiomarket.com on the word wide web. (VHF Reflector)

ARNEWSLINE(tm) SUPPORT FUND UPDATE: ARNEWSLINE(tm) IS NOW A 501(C)(3) NOT FOR PROFIT CORPORATION

Ladies and gentlemen, with a long awaited announcement, here is Amateur Radio Newsline Support Fund Administrator, Andy Jarema, N6TCQ:

--

Just about a month ago I recorded an announcement similar to this. It was to be aired on newscast number 1257 which went to air on September 14th. After the events of September 11th, I felt it was best to delay a few weeks. As this is good news, I really do not want to hold off any longer.

Over the past two years we have all been working to bring Amateur Radio Newsline out from its old Westlink Radio Network identity and into its own individuality. This meant several things including a subtle name change, branding of our new name and revamping our website. It also meant becoming a self sustaining not for profit corporation. I am delighted to report that last goal has now been achieved.

Earlier this year, Amateur Radio Newsline Inc. was granted status as a California non-profit corporation. Then, in late August the I-R-S granted our petition and the Amateur Radio Newsline, Inc. became a Federal 501 (c)(3) tax exempt not for profit corporation. Yes, that’s right, as of August 20th, Newsline, as the programming arm of the old Westlink Radio Network is officially gone and the Amateur Radio Newsline as an entity unto itself came into being.

All of this was made possible by a generous donation from a Newsline supporter and benefactor who we are not at liberty to name. But it was that person to whom we at the Amateur Radio Newsline owe a deep debt of gratitude. So we pause a moment and say thank you. Thank your for helping make a dream of almost a quarter of a century become a reality.

We also want to thank the wonderful folks at the Holmsburg Amateur Radio Club in Pennsylvania under whose not-for-profit charter we have operated since incorporating as the Westlink Amateur Radio Network in the 1980’s. They are the people who said to us -- here is a place to start. They have been an

ardent supporter of what we do almost since we began our newscasts in the 1970’s. We will always consider them as being an important part of the Amateur Radio Newsline family.

Our final note this week. Just a reminder that the address for the Amateur Radio Newsline Support Fund still is PO Box 660937, Arcadia, CA 91066. If you missed it, don’t worry. It will be given again at the end of this week's newscast. For the Amateur Radio Newsline Support Fund report, I’m Andy Jarema, N6TCQ.

--

On behalf of everyone involved in the Amateur Radio Newsline, a big thank you to Andy and to our secret contributor for making it all happen. (ARNewsline(tm) Support Fund)

**

T-HUNTING: THE OWLS ARE BACK

Its fall and that means its migration time for numerous species. That includes that ever elusive Burrowing Owls. Here’s Joe Moell, K0OV, with the latest.

--
The fall 2001 migration period for Burrowing owls is beginning right now. Once again, Amateur Radio operators and VHF monitoring enthusiasts are being asked to help researchers study the patterns of this diminishing species. In addition to owls from the plains of Saskatchewan and Alberta, which hams have listened for since 1998, we're now being asked to monitor for 30 owls that were tagged near Moses Lake in eastern Washington state. Vicki Garcia of the University of Arizona wants our help, because it is uncertain if these birds spend the winter in California, or Baja California, or they go eastward to Nevada, Arizona, New Mexico or even to Texas.

The Canadian owl tags are in the 172 MHz range, while the Washington owl tags are near 150 MHz. If you live in a central state from North Dakota to Texas, or in any state to the west of that line, and you have sensitive monitoring equipment for these frequencies, your help is needed. For all the frequencies and monitoring information, go to my Web site, www.homingin.com. HomingIn is one word.

If you aren't on the Web, send e-mail to owls@homingin.com or postal mail to my callbook address. Again, that website is www.homingin.com

Thanks in advance for your help. From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline

--

If you missed any of that, simply take your web browser to www.homingin.com. (K0OV)

**

NAMES IN THE NEWS: AMSAT-NA ANNOUNCES BOD ELECTION RESULTS

Some names in the news. This as AMSAT North America announces the results of its recent Board of Directors election. Barry Baines, WD4ASW, Dick Daniels, W4PUJ, Robin Haighton, VE3FRH, and Bill Tynan, W3XO, will retain their seats on the Board for the next two years. Bruce Paige, KK5DO is the first alternate and Dick Hambly, W2GPS is the second alternate. Paige and Hambly will serve until the next election. (ARRL, AMSAT-NA, others)

**

NET OPERATIONS: NEW NORTH TEXAS 222 MHZ NET

Dave Duval, K5UGM, in Dallas says that local hams are trying to start a new North Texas 222 MHz Net. They are also looking for station to check-in. The net operates on 222.105 MHz on Friday nights at 8 Central Time. If you think you can make the path, Bill says that the net will be listening for you. (VHF Reflector)

**

DX

In D-X, word that the same crew that aired 5U2K, 5U3T and 5U5A in March of 2001 will go back to Niger in January and February of 2002. This for a 2 week DXpedition with a larger crew that will include 3 to 4 new operators from Italy and the United States. At least 3 stations will be put on air with special attention paid to 80 and 160 meters. Overall operations will take place on 160 through 10 meters on CW, SSB, RTTY, PSK 31. Another station on 6 meters will operate CW and SSB. Callsigns will be announced at a later date.

Also, the electronic logbook is now on-line for the August 3rd tro the 5th K3L and National Lighthouse Weekend operation from Annapolis, Maryland. Stations who worked the AM Expedition to Thomas Point Lighthouse in the Chesapeake Bay can now check whether they made it to the official logbook. A photographic QSL certificate will soon be available. The QSL manager and other details are now posted at www.amfone.net/K3L. (Various DX sources)

**

THAT FINAL ITEM: HAM RADIO VS. A RUNAWAY BLIMP

And finally this week, what do you do if a blimp gets away? The answer. Call out ham radio. Amateur Radio Newsline's David Black, KB4KCH has the high flying details.

--

For members of the North Central Missouri Skywarn team…weather spotting means being on the lookout for hail, wall clouds and other severe weather…but the night of September 7th brought a situation they won’t forget anytime soon. Severe
thunderstorms were moving through the Kansas City area that evening, keeping amateur
radio Skywarn groups busy, assisting the National Weather Service. In the town of Trenton,
Glenn Briggs, KB0RPJ, was serving as Net Control for his spotters when heard a

request he didn’t believe at first.

--
IN We were discussing the squall line
OUT find it for them.
--

The blimp belonged to MetLife and had been parked at Kansas City’s Airport. It was scheduled for aerial photography during the following day’s Kansas City Chief’s football game. But mother nature had other plans for this airship as Briggs found out.

--
IN The t’ storms went thru and as it was moored at the downtown airport
OUT flying thru the air
--

For Briggs and his fellow hams, spotting suddenly brought forth a new challenge.

--
IN it was kind of interesting to try to look at the ..
OUT hit by a blimp
--

The blimp was in the air, flying out of control, for at least 45 minutes. The next task was to find it. Briggs says hams started a blimp watch.

--
IN We had begun sending hams out to try to track a NE trajectory
OUT land on a truck
--

A team of amateur radio spotters went to the scene and confirmed that blimp had been found. The crash site was a farm in the community of Chillicothe--that’s about 85 miles northeast of the Kansas City airport. The blimp fell to earth after its self deflation system activated. No one was injured. Members of the Skywarn team assisted with notifying the FAA and other officials in Kansas City. For Glenn Briggs and his fellow North Central Missouri Skywarn team members,
September 7th is a night to remember.

--
IN I would say it’s the most unusual
OUT our spotters will remember for years to come
--

Future weather spotting nets will undoubtedly include the usual…hail, high winds,
maybe even tornadoes. But at least one Skywarn team has the additional experience
of blimp spotting.

From Birmingham, Alabama, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline(tm).

--

And what else is there to say? (ARNewsline(tm))

**

NEWSCAST CLOSE

Sheesh, you antigovernment guys are just as indoctrinated by your "free" media outlets as the rest of the American public is by their corporate controlled ones. All you guys do is listen to your extremely biased "free news" outlets (just biased to the right instead of the left like the corporate media) and soon you're sounding just like WWFV where the rant and the noise from the poor transmitter and the background hiss are all one and the same and indistinguishible from each other. Come down from your ideological ivory tower and use your brain (unless it's been atrophied) and listen to all different viewpoints on SW and make your own conclusions. I know it's an absolutely shocking, subversive thing to do, but it tends to make one more well rounded.

In article <3BC76561.B79031EB@utopia.com>, wpitman@utopia.com says...
>
>> Some people should constantly check their pulse to see if they are dead yet!

>> spending money on radios. I think it's a great idea.
>
>You most likely also think the Federal Income Tax is a good idea too. Hey, why
>not get a second job so that we can send them TVs and DVD players.

Let's see YOUR alternative to government.
>
>> The Afgans have been
>> media silenced for years.
>
>And as your statements show, so have Americans.

Look in the mirror. Or have you sold your soul to the far right and don't appear in a mirror any more?
>
>> An uneducated society knows only what they are
>> told.
>
>Wow, you knew that, but believe you live in the greatest country in the world,
>right? Our health care is the best in the world too, right? How do you know
>that, because you have experienced the others, or because that is what the US
>media keeps telling you over and over again?

The health care system sucks, and there's other things that need work, but where would you rather live? Afghanistan? Or is it really paradise and the media is lying to us? (Maybe it would be for the far right.)
>
>> This is a smart and strategic method of getting other unsurpressed
>> information to the Afganie people and to educate them as to what the rest of
>> the world thinks and is doing!
>
>No, ONLY to what the American broadcasts have to say. That is why the radios
>are tuned to one frequency as to censor the broadcasts so they CAN'T hear what
>the rest of the world thinks.

You've never fought in a war, or talked to people in the military, I see. War is absolute. One guy wins, the other guy loses. Preferably, you want to be the winning guy. So you do whatever it takes. Turning the other guy's people against him is simply part of the strategy. Or would you rather have Osama bin Laden be Grand Caliph of Everything Everywhere, and be forced to bow towards Mecca five times a day, and be forced to wear long robes on a boiling summer day, and have to grow your beard to the specified length? Oh yeah, and you can add in slow starvation too.

Yep. I like to get my news from Deutsche Welle. The Swiss aren't on SW anymore, and the Netherlanders don't broadcast much to NA, so I tried the Germans, and they're better than the British who are American puppets. Got it? :)

Also, I've been trying to get Kol Israel's international oriented news show in-they only broadcast it during the day, and at night do bulletins from domestic Israel Radio. Also I'd like to hear what Iran and Pakistan have to say, but I can't seem to get them in English. Although I do like the Islamic chanting from Saudi Arabia

BOOM!

oops, Walter's head exploded. Big loss, not.

Ever heard of libel or slander, Bill? No person in this country has a "right" to defame another person's character. And, when you start calling someone a traitor, you had better have serious proof to back it up because that is a darn serious accusation. People called that have been killed in this country (and that fact alone makes it far more than just Dan's opinion).

That's right, Dick. I enlisted in the Army in 1970, during the Vietnam War. And I've worked on and off for the military ever since. But that still doesn't change the fact that I'm tired of war. I've lived through too many of them. I've read about too many people dying. I've seen the pictures of too many people suffering. And I've seen way too much destruction. But I don't understand those feelings that would affect my status as a patriot. Does one have to like war to be a patriot? Is there no room for anything else?

We have a number of AWACS aircraft, JJ. And our military is oriented around a two to three engagement strategy. Therefore, we would never send all of any single type of aircraft to a single conflict. In other words, there are AWACS aircraft sitting on the ground right now here in the US. Again, why aren't those aircraft patrolling out skies instead of NATO aircraft?

5699. Re: Fun With The Smith Chart

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-14 02:07:43 UTC
From: n2ey@aol.com
Message-ID: <20011013220743.01328.00001414@nso-mb.aol.com>
Source record: 21942

Let's see what happens if the line is not lossless...

Problem 2:

A radio amateur has an antenna fed with a length of 50 ohm low-loss coax. The electrical length of the coax is 0.8 wavelengths at the desired operating frequency. The radio amateur uses a home-made Macromatcher (a form of RF impedance bridge) to measure the impedance at the "shack end" of the coax, and determines it to be 30 ohms resistive in series with 32.5 ohms capacitive reactance. In other words, the generator end impedance is 30 - j32.5 ohms at the desired operating frequency. Determine the impedance at the antenna, and the SWR on the line, using the Smith Chart. Assume the total line loss in the line from all causes is 2 dB.

Solution 2:

Since this is a 50 ohm system, normalize the impedances by dividing them by 50. This gives a normalized generator end impedance of 0.6 - j0.65 ohms. Plot this normalized impedance on the Smith Chart.

Draw a circle, centered on the prime center, that intersects the 0.6 - j0.65 ohms point just plotted. This SWR circle crosses the resistance axis at 2.6, which means the generator end of the line is operating at an SWR of 2.6:1 Transfer this SWR reading to the auxiliary "Atten dB" scale by placing the point of the compass on the center of the scale, and making a short arc on the "atten dB" scale. Note that this SWR corresponds to 3.5 on the "atten dB" scale.

Since the line loss is 2 dB, reset the drawing compass to 1.5 on the "atten dB" scale. This is in the "toward load" direction on the scale, which is intuitively correct because we know that the SWR at the load (antenna) will be higher than at the generator. Draw a new SWR circle on the Smith chart. This new circle corresponds to a load-end SWR of about 5.6:1

Draw a straight line from the chart's prime center to the wavelength scale, through the 0.6 - j0.65 ohms point previously plotted. It should intersect the wavelength scale at 0.112 on the "towards load" scale (the inner wavelength scale), which is 0.338 on the "towards generator" scale (the outer wavelength scale).

Since the electrical length of the coax is more than 0.5 wavelength, subtract an integral number of half waves from the coax length. The result is 0.3 wavelengths of feedline. Add 0.3 to 0.112 to get 0.412 wavelength. On the chart, follow the "towards load" (inner) wavelength scale counter-clockwise exactly 0.3 wavelengths to 0.412 wavelengths on the inner scale (0.088 on the outer scale)
Mark this point (0.412) on the wavelength scale.

Draw a line from prime center to the point just plotted on the wavelength scale (0.412 wavelengths on the inner scale). Note the point where this new line crosses the second (5.6:1) SWR circle - it should be at the intersection of the 0.25 resistance circle and the 0.6 inductive reactance circle. The normalized antenna impedance is thus 025 + j0.6 ohms

Multiply the normalized antenna impedance by 50 to get 12.5 + j30 ohms antenna feedpoint impedance.

Answer: 12.5 + j30 ohms antenna feedpoint impedance, SWR of 2.6:1 at the generator end and 5.6:1 at the antenna end.

Dick, I'm all for a reasonable defense. However, I do not see how most of the things I listed are going to increase security for anyone (the terrorists didn't attack a small town shopping mall or bus station). Therefore, I see no legitimate reason for those things.

Who said, Dick? And who decides on what those sacrifices must be? If you say the government, then you truly have no understanding of what this country is supposed to be about - why we are different than those other countries where government controls the citizens.

Besides, I'm all for sacrifice when it serves the legitimate needs of national defense. i just don't see how the loss of my political freedoms in this situation is a national defense need.

Lexington and Concord was a long time ago, Dick. And the people today are not the same people as those at Lexington and Concord - the people at Lexington and Concord understood the value of those rights and did not give them up so easily (even at Lexington and Concord).

I know it is frustrating, Kim. But there will always be people perfectly willing to walk off a cliff. So many in this country think all the bad things we hear about in those other countries (no freedoms, military control, neighbor against neighbor, etc) cannot happen here. They seem to think there is some magic force in place to prevent all that. They cannot understand that the only way this country is going to remain a great, unique, country is for each and every one of us to fight tooth and nail for it to stay that way - we are that magic force that prevents this country from turning into something horrible. Therefore, each of us has a mandate to challenge every instance of a move in that direction. If we don't, trust me when I say there is nothing else out there to prevent this country from turning into a place none of us would want to live in. Sadly, there will always be people who will not understand that. All we can do about that is to reach out to those who can understand and hope there is enough of them to make the difference.

Actually, I was just being intentionally fatuous, Kurt. The way he wrote it made it sound like he was talking solely about strikes on the US (which was probably not his intent).

That's not what the President says. So do we believe you over the
President?
And just how has that withdrawn any of your freedoms?
You and Kim need to get together and have a good cry.

You and Kim are experts at laying out the verbiage without saying
anything meaningful. There have always been plenty of malcontents who do
all the whining and protesting while the do-ers take care of the problem
at hand.
The difference is recognizing what needs to be done and doing it, as

opposed to all the "woe is me" crap.

Richard, our age is showing. Being too old to be a boomer, I noticed the shift in outlook in college about 1963. The difference in outlook is striking. This is a generation that was never under the threat of being shot at, never lived thru the unending idocy of HUAC and the 50s in general, and panics at a cheap and incredibly lucky caper. The Boomers are without a doubt the most useless generation this country ever produced and these are their children: appearances are everything, facts are unrelated, and personal responsibility as unknown as the back side of the moon. As Mike Royko put it, $200 haircuts on $1.98 heads.

I am reminded of a bet I made with one such dear lady that she could not get thru a dinner conversation without a collective noun. She couldn't do it; some evil of 'Society' caused an eruption after about 12 minutes.

There is hope. A local high school announced community service for its students with the predictable reaction, "When did I get arrested?" but some smaller groups both hacked the computer system and issued a letter withdrawing it and burglarized the pool the nite before the state tournament putting a load of industrial strength TidyBowl in the pool turning it a nice deep blue. Neither caper resulted in any damage to property. Yes!!! Maximum consternation with minimum property damage, no petitions or torchlite parades, no touchy-feely bullshit, and everyone shut up and graduated. I see a generation coming up that will make the 60s look tame by comparison; I just hope I am around to see it.

Time to dig out my Bobby Dylan tapes!

I have thought about it. Unfortunate thinga happen in wartime. And this IS wartime. Things like thouisands of Japanese being interred because of fears that some of them may have been subversives. And some of them may in fact have been. The normal rules of daily life in the USA have to be tightened in wartime, lest we find ourselves defeated by our own demands for more freedom than survive wars. I would have thought that any thinking person who has made any effort whatever to stay abreast of history and current events would be familiar with that. None of us like it but some of us understand it.
You accuse me of being paranoid about the ARS' future. That's small potatoes beside your fears. I know that sacrifices must be made, they always have been in wartime. This is no exception. Just more insidious this time than most earlier wars. I can guarantee that no majority of Americans would ever accept totalitarism, and that is why things will go back to normal as always when this is over, long time that it may be. The alternative is far more unpleasant to contemplate.

McGuire AFB in southern NJ has about 10 sitting on the tarmac as of this
weekend now. You can see them from the main hiway that passes next to
the base. They also have a pot load of KC10 tankers

Pretty interesting to watch them take off

Except for the fact that so many were killed this time, there is no difference in *anything* about the WTC than any other incident around the world. There's always been terrorism, there always will be. The price we pay for our freedom in this country is *sometimes* things like what happened at the WTC. The price we pay for our freedoms is letting people run around who have outlandish ideas that are allowed to express them. Why have you been so stirred to action (I mean, after all, you have volunteered to re-serve in your country's military haven't you?) this time around. Is it more worth "defending freedom" because 5,000 people died, rather than the 250 who died the last time at the WTC? What government shall we go and conquer to rid this world of this nasty stuff? What government, Dick? And, if not a government that we fight, then who?

A parallel to this whole thing would be why haven't you, or the United States government, or anyone, ever been so stirred by the incessant effects of drugs on the world--an "incident" with a death count 1,000X the death count of that at the WTC. A little more investigation to that whole concept leads to the same arguments. What government shall we go and conquer to rid this world of this nasty stuff? And, if not a government that we fight, then who?

Your thinking is quite convoluted.

Since there's many of us on the "other" side of your thoughts, Dick, and you're having such a wonderful time as labeling us as fanatics or paranoids, why don't you give us an idea of what you're thinking "the alternative" is? What alternative? What conclusions has your racey little mind gotten to? Hmmm? And, the next question would be why is your foregone conclusion so much more valid? Hmmm?

Thought so.

Still, loss of life is nothing to sneeze at but the number was 9, not
250.

Just wait there Kimmie, till it hits in your backyard. You'll think
different. You remind mew of the pinhead Iowa goober who stated, just
after everything happen, that it was a NY problem and an East Coats
problem and that "they" should have to deal with it. Mark my words,
you'll change your mind when the next round, and there will be a next
round, directly affects YOU.

Why not come to NYC and attend a few memorials and tell the families that
they should not support the "reduction" of a few rights.

Until then, go back to monitoring 2 meters and checking call signs to
make sure that everyone using the repeater is a licensed amateur. Stay
out of discussions that showcase you total ignorance of the issues.

If only they were brains (Ernst Blofeld referring to Jill St John's
Breasts in "Diamonds are Forever"

Good analysis, Dick. I sure hope their numbers don't grow any further,
and like you I see hope for the future generation. I have a 14 year old
grandson who has for years been determined to go to the AF academy and
fly F-16's, and I do believe he'll make it if he doesn't stumble over
something unexpected enroute. He has the brains for it. And I told him
the same thing I told his mother and her siblings when they were his age
- "When all the BS and politics settle out, there has to be humans still

standing who are willing and able to do what has to be done. Your mission is to be one of those people."

You have no real idea what happened on Sept 11, do you? It flew right past you, to no ones surprise. The terrorists actually had a failing day considering what their total plans for us were. Why do you think the government immediatley grounded every one of the airliners that were then in the air? How many other crashes into facilites or other buildings do you think that helped prevent? Where is your head in all this? Paralyzed by fear? Do you really think that this was "just another terrorist incident", one which we must expect since we are the world's mose envied society? Wow! You and Dwight really should get together and compare more notes.

What this should tell us is that there are plans afoot. Plans to use them in places other that the area around Mcguire. If I was Saddam Hussien I'd be getting nervous about now.

Notice the similarity to the Nazi's attitudes toward the Jews
during WWII. Either all citizens are free or none are free, Dick.

The one thing we do know for sure is that they are not.

Last time I was in New York was shortly before WTC was built. I was
discharged from the army at Fort Hamilton, Brooklyn after getting off
the boat from Europe. Before that I was stationed within commuting
distance at Fort Monmouth for a couple years, and before that on a NIKE
site near Fort Dix/Mcguire. I enjoyed that area.
I imagine things are much changed. And now they've changed again.

My sentiment expressed in my posts should not be translated to my thinking that this is "someone else's problem." Far from that--it is all our problem. If you took my comments to have me thinking I don't care, rethink that because I do.

My basic observation is that there is and always will be terrorism and that there is no difference in the act whether it is 1 or a thousand killed, or whether it happens on US "soil" or overseas. It matters not to me whether a terrorist incident happens in Germany, Israel, Afghanistan, Iraq, NYC, Dallas, or Iowa. It is still a horrendous crime against humanity.

I wholeheartedly agree with the military action we are currently taking, and would agree with any military action deemed to be appropriate to battle this thing called terrorism. I even agree with stricter "access" procedures at places like airports, borders, train stations, bus stations, etc., along with public access buildings and my workplace. Those are all places where "we" volunteer to abide by rules we may not agree with because they are public access, or workplace access.

I wholeheartedly *DO NOT* agree with or support *any* agency, government, or individual being able to listen in on conversations I have on the telephone, or through emails, or whatever. I do not agree with or support *any* move the President, military, or any other leader takes to censor what my Congress knows or what the media knows and shows. I do not agree with or support the longer detention of people who are not charged with a crime. I certainly do not agree with rounding up people based on their nationality (as we did with the Japanese and as someone here in this NG seemed to support all Muslims be rounded up and detained). There's more I do not agree with. Will it matter to me if it "comes to my backyard?" It may be you, yourself, who designs opinions and a way of life that suits your particular needs--but I do not. In case you didn't know, NYC is a part of the United States. And, you speak out of ignorance for how do you know that I have not been "personally" affected by the tragedy in NYC?

I will tell anyone, family members of people who died in this tragedy or not, my opinion. As I stated, I don't create and hold opinions because they are easy for me to have--that must be yourself you are confused with. You ignore the comments of a victim's wife who did not wish a military response to this tragedy--and I am sure there are others who are family members of victims who battle internally with what their opinion is about losing personal freedoms.

So, Jack Mehoff, go back to jacking why don't you. You're obviously good at stroking yourself, and only yourself.

They had quite a success at the WTC, Dick, and I think they'll count any
deaths they caused as a success. I don't think they are worried about
counting numbers. They are a patient, cunning, and determined enemy.

>

We know at least one, that of the plane heading for whatever target it was
heading for when it was downed in PA. I applaud that the FAA immediately
grounded all planes, Dick. What exactly are you failing to understand about
what I am saying?

>
> Where is your head in all
> this? Paralyzed by fear? Do you really think that this was "just another
> terrorist incident",
>

Yeah, I do, Dick. It was just another among many. Which one would you like
me to call the most important, the most significant? You obviously have

something in mind. Which one, Dick, is the big one? I'd say the attack on our Marines was pretty big, I'd say the daily terrorist assaults in the Middle East have totaled several thousand deaths when we add them all up. Yeah, this was just another one--among many. I ask you again, Dick, which one would you like me to call the most important?

>
> one which we must expect since we are the world's

I can't speak for Dwight but I am having hysterical laughter over your interpretation of what you believe is good and just--and that you think everyone ought to think just like you while you dare to utter anything that remotely resembles anything to do with the spirit of freedom. As I've implied of you before, Dick, your idea of freedom--which would probably have people like me and Dwight inside the WTC when it went down--is one I can certainly decide to live without.

Fear? Threatened? You are pathetically malnourished in your brain cells.

I note no similarity at all. The Nazi attitude towards Jews and several other groups was that they were to be totally exterminated. There was no such attitude by the US Govt. towards Japanese Americans during WW2.

There's a big difference between an internment camp and an extermination camp.

Oddly enough, the internment of Japanese Americans (most of them citizens) was on the West Coast. There was no internment in Hawaii. And there was not a single documented case of sabotage or espionage by a Japanese American during the entire war.

>Either all citizens are free or none are free, Dick.

No citizen is free in a country that is under siege.

Too bad they don't manufacture transceivers. I'd like to see them get their equipment certificated by the FCC with a lot of 'secret' responses to questions. Gee, why does my antenna show a 4 to 1 SWR with their radidio when it is 1.2 to 1 with my other rig? Ahhh ... secrets. Didn't stand up too well to your knife, did they?

73 from Rochester, NY (where the 10 meter port on the megaplex repeater has been really humming lately)

I can't recall a time when the US wasn't under siege by someone,

First the Axis Powers, then The Soviet Union, the drug lords,
and now the terrorists. Actually, we have been under siege by
the terrorists for a number of years.

The majority of cordless phone batteries are trickled charged, so there should be no problem with floor sweeping batteries other than the cheaper ones have a tendancy to get dendrites. If you can find a vendor that uses Sanyo batteries, that should not be a problem. Sometimes the junky vendors can't weld to the battery worth a damn, i.e. the tab lift right off.

One of the better battery sources is http://www.batterystore.com/ , which is really TNR technical. They will do custom battery packs if you provide the artwork.

Sure, only provide a couple of the tools to fight. Why not have the
military shoot blanks. Whas a matter TIT's, got something to hide? If
not, why the fear? These friends of yours love people like you. They
use the Internet, the mail, the phones to co-ordinate and you'd allow
them to continue with no resistance. Clueless girl!!!!

I do not agree with or support *any* move
> the President, military, or any other leader takes to censor what my
> Congress knows or what the media knows and shows.

Gee, then you agree that this knowledge could and might jeopardize
American lives by telegraphing advance happenings. Mighty big of you
TIT's. Perhaps it should extended to say..SPORTS. Let's make sure the
teams have each others play books so there will be no surprise.

In case you didn't know, NYC is a part of
> the United States. And, you speak out of ignorance for how do you know that
> I have not been "personally" affected by the tragedy in NYC?

Of course it did TIT's. I'm sure you proudly display the flag outside
your white trash trailer type home. BTW, remember if you leave it
outside, it should be al;l-waether and it should be lite at night. But

you knew that TIT's because you have to have the givernemnet tell you
everything it does.

And how do I klnow..I read you responeses, they telegraph everything.

Sure, only provide a couple of the tools to fight. Why not have the
military shoot blanks. Whas a matter TIT's, got something to hide? If
not, why the fear? These friends of yours love people like you. They
use the Internet, the mail, the phones to co-ordinate and you'd allow
them to continue with no resistance. Clueless girl!!!!

I do not agree with or support *any* move
> the President, military, or any other leader takes to censor what my
> Congress knows or what the media knows and shows.

Gee, then you agree that this knowledge could and might jeopardize
American lives by telegraphing advance happenings. Mighty big of you
TIT's. Perhaps it should extended to say..SPORTS. Let's make sure the
teams have each others play books so there will be no surprise.

In case you didn't know, NYC is a part of
> the United States. And, you speak out of ignorance for how do you know that
> I have not been "personally" affected by the tragedy in NYC?

Of course it did TIT's. I'm sure you proudly display the flag outside
your white trash trailer type home. BTW, remember if you leave it
outside, it should be all-weather and it should be lite at night. But

you knew that TIT's because you have to have the government tell you
everything it does. I'd bet Ed's lobster you ain;t doing this

And how do I know..I read you respionages, they telegraph everything.

>
> I will tell anyone, family members of people who died in this tragedy or
> not, my opinion. As I stated, I don't create and hold opinions because they

> to this tragedy--and I am sure there are others who are family members of
> victims who battle internally with what their opinion is about losing
> personal freedoms.

And which one was that TIT's. So far, every wife who lost their husband
has supported the fight 100%. There is no report of anyone in this
situation who professes a dove attitude

>
> So, Jack Mehoff, go back to jacking why don't you. You're obviously good at
> stroking yourself, and only yourself.

What a potty mouth. Goes through all this to placate an obvious desire
to
see us over-run and then this... tsk tsk tsk

With thoughts of you everynight...ohhhhh TIT's oohhhh TIT's retch retch
retch

UUppp, someone on the repeater who's callsign I don;t recognize...better
go challenge them cause that's the TIT's way

ciao cutie

>tactical nuclear weapons missing from the former Soviet Union, by some
>accounts all the 148 that they had are now missing. Where do you suppose
>they went?

Most are undoubtedly still in the hands of International arms
brokers, some in the middle-east for use against other enemies, and, I
have no doubt what-so-ever, some are undoubtedly in the US already.

> With a little luck maybe one of those troops snooping around your town
>will catch the nut carrying of one of them before he can set it off.

Sure. All they have to do is conduct a house by house search
of every home in the US, looking into closets, basements, car trunks,
cabinets, etc. In short, all they have to do is take away any rights
we still have left (and, for those who haven't been following the
news, thanks to the passage of the new Senate bill, we have even less
than a week ago) and turn the US into a complete police state.

I'm sure that KGB, the Gestapo, or the Stazi could have easily
located those nukes in their nations--for that matter, given their
border controls, they would never have got there in the first place.
On the other hand, living in a nation such as those that supported
such organizations simply isn't worth the cost of protection. The
founders of this nation would be disgusted by the way politicians are
taking our rights away--rights THEY risked their lives to obtain for
us so we can freely give them away so we don't have to be afraid of
the boogie man!

By the way, don't feel too secure--remember one of the major
targets of the current anti-terrorism terrorism by our government is
to limit communications by terrorists. Don't be surprised if your
rights as a radio amateur are stripped away some day in the interest
of "protecting you from yourself."

A police state isn't the kind of nation I fought for in
Vietnam--and it isn't the kind of nation that many died for in the
Revolution. A lot of Americans feel the same today--it's a shame that
our government and the media are capable of so manipulating the news
that they don't realize how many rights they are losing in the
interest of being "protected."

Thus Spake Dick Carroll <dixie@townsqr.com>:

> That's not what the President says. So do we believe you over the
>President?

When that President is George W. Bush?

I'd believe almost ANYONE over him.

Simply because a person is President of the United States, it
doesn't mean he is either honest or ethical--only that he knows how to
manipulate the electorate. I assume you feel that a President will
invariably tell the truth--in which case, how do you justify
Monicagate or Watergate?

Bush would lie to further his personal agenda in a
heartbeat--anyone who doubts that need only look at his actions as
Governor of Texas for confirmation.

> And just how has that withdrawn any of your freedoms?

It hasn't.

To me, the thing that bothers me about NATO AWACS patrolling
our borders is that it makes it pretty clear that our attempts at
de-militarization has gone well beyond any reasonable limits. Simply
put, we no longer have a military capable of adequately meeting the
needs of National defense--i.e., we can't simultaneously pursue a
limited war (against a third-world nation with very limited military
equipment or training) and simultaneously patrol our own borders.
THAT, not the fact that NATO is doing it, is what is scary.

> You and Kim need to get together and have a good cry.

If that cry is over lost rights--I think I'll join them.

Same attitude the radical Islamics have against all non Islamic.
The Taliban leaders are crying about a few civilians being killed
by the US bombing saying that these are innocent people who
haven't done anything to anyone, never mind all the innocent
people killed in the WTC event who never did anything to anyone,
to these guys they simply don't count, they weren't worthy to live
anyway.

You finally, after a long diatribe of nothingness, used the possessive of TIT in the right way (at your last sentence). You *do* have some intellect; however small it may be.

Pssst (the plural of TIT is TITs, not TIT's).

Times Square roughly 40th up to 44th Sts and from 5th to 8th Ave

At best your at, what 50th ST?? No great hotels anywhere near there

Carnegie Hall is on
> my block,

Carnegie Hall is at the corner of 56th and 7th AVe. A good 6 blocks
north of your 6 blocks north.

am going to walk around Times Square tonight, and drop in to
> the Harley Davidson Cafe.

Then you're going in the wrong direction since the HD Cafe is on 56th St.

>
> I've always loved NYC, but it has been some time since I was here
> last, I was amazed at how much they have changed Times Square.

Ya, I hate the fact they've changed all the street. Funny though, you'd
be staying in Manhattan when the RED CROSS building in/on Cadman Plaza in
Brooklyn and the Marriott RIGHT NEXT DOOR is offering rooms to the
volunteers for only $50 a might including meals, as their way of helping
out.

I mean, why stay in NYC when you can stay in a 1st rate hotel within
walking distance.

Seems to me, that an Ohioan in Brooklyn is a far FAR stretch, but that's
just on evolunteers opinion, as I am staying there helping out, and I'm
from Ulster County, about an hour North of Manhattan and haven't seen you
yet

But then again it is 20 stories tall and they have 1000;s of workers, eh Ken??

>he needes to beat us. Common sense is uncommon among you.

Obviously, we need to prevent the press from revealing information that could be of use to our enemies--that's just common sense. But there's a great deal of difference between preventing the press from reporting, for example, the distribution of our troops and forbidding them from reporting the OTHER side of the issue. Our government DOES have an interest in keeping the Taliban from knowing exactly what we are planning, and how we intend to implement those plans--but it does NOT have a legitimate interest in preventing us from hearing bin Laden's propaganda, from knowing what HAS been done already (presumably, the Taliban know what we've bombed--it certainly won't provide them any help if US citizens are given the same information) or any of 100 other things.

During Desert Storm the press was prevented from even reporting the weather over Baghdad--did our government REALLY believe that the Iraqi's were too stupid to look out the window--or that their meteorologists weren't capable of interpreting the data at their disposal? During that same war, correspondents were prohibited from reporting what they saw--or even accompanying many of the troop movements into Iraq (and the same thing is expected this time)--that isn't about protecting our troops, it's about spin control for our citizenry! During WWII, Korea, and Vietnam war correspondents accompanied the troops into action. Their reports may have been censored--but ONLY to restrict information useful (and not already available) to our enemies, not to prevent our citizens from knowing what was going on.

Sorry Dick--I'm as much of a patriot as anyone else and, as a Vietnam vet I understand the need for security--but in this case (and that of Desert Storm) the secrecy is strictly for political reasons, not strategic ones--a very different matter.

Not so,your are using massive in a pejorative manner to show a limited
amount of legislation, as being out of control.
>
> - Overt censorship (White House asks news agencies to limit Taliban
statements).

Since when is asking someone not to rebroadcast verbatim
telecasts from the terrorists(due to possible hidden messages) overt

censorship.
>
> - Overt censorship (military urges press to not cover attacks in
Afghanistan).

The same was true during the Gul war.How much did that hurt your rights.
>
> - The President restricts access to information by members of Congress.

You forget that congress has the right to demand information from the
executive and can impose severe penalties on those that lie.
>
> - Hate crimes against Arabs widespread (according to CNN).
> CNN has been caught lieing and stretching the truth on more then one
occassion.
>
> Osama Bin Laden should be proud of what he has done to America.

I dont know about you but I was around during world war !!
and there were a number of restrictions on everyday life. As I recall the
day after Pearl Harbor there were national guard troops at airports bus
stations railroad stations and stationed up and down the west coast.
Japanese americans were held in camps for fear of sleeper spies who may had
done considerable damage to the country. A number of folks got really upest
about that forty or fifty years latter,but no one can tell you how many
lives that internment may have saved.
When these new laws were imposed we did not know how long they would
last,the same as now,but we do know
that all this restrictions were lifted after thr war. If you dont understand
why,let me tell you the American people would have it no other way, and not
one politician would have lasted who atempted to do otherwise. So put away
your conspiracy ideas and hatred of capatalism,trilateral comission
nonsince,start thinking we will get these people who caused all these
problems and return to the american way of life.

A) It's people like you who make it very difficult for others to trust having that much government control, Dick. Did you ever think about that? With people like you around, it's *dangerous* to think of that much government control--enemy or none and war or none.

B) Super freedom freaks? Now it's even unpopular to desire and love freedom??!! Refer to A, above. People like you, who are many in the United States, scare me far more than the Taliban or bin Laden. Far more.

Kim W5TIT
Getting out of this conversation because you scare the Hell out of me. I am also hanging my head in sorrow that someone of the United States would ever refer to the love of freedom as being freaky. You *are* one of them aren't you? You sure your last name doesn't start with "bin"?

It doesn't seem to me, Rick, like Dick is all that much into patriotism.

Thank you for your service to our country, and thank you for defending my rights also--as well as the rights of other people I disagree with.

Kim W5TIT

I'll repeat, common sense is uncommon among you. If the Germans had
attacked New Tork they probably would have.

How does saying Osama bin Laden should be proud of himself serve to do
anything but advance the cause of Al Quida?

How could the Germans attack New Tork? They don't even know
where it is. I don't even know where it is. Where is it?

This last I can agree with. The vast majority of Americans are just now
beginning to realize it.

The previous attack on the WTC, the bombing of our embassies in Africa and the
attack on the USS Cole were all done by the same folks who gave us Sept 11.
There have been attempts that were foiled by law enforcement.

Ever wonder if Timothy McVeigh might have been one of them?

I seriously doubt calling it an opinion is going to end the possibility of libel or slander. Just about everything you say is an opinion, including defamation. While I'm not a lawyer, as far as I know, the only real defense in a libel or slander case is the truth - if it is true that "X" is a traitor, you're covered.

I'm not a lawyer,\

You certainly are not, that is clear. Libel or slander must be presented as being fact, not opinion. Opinions do not bear the force of fact.

as far as I
> know, the only real defense in a libel or slander case is the truth -

And if, in his opinion, Mr X's behavior is traitorous, that is his opinion and the U S Constitution you were shedding so many alligator tears over a few posts ago, totally supports his right to speak his mind. Mr X is just as free to refute it with fact, if he can. Libel or slander it's NOT.

Thanks, Jack. I knew the military would never send all of it's AWACS aircraft off to a single conflict - to do so would defy common military defense logic. And I'm sure a quick look around the country would locate a couple dozen more.

The "inside information" you made up "indside" you head I suppose.
Just because you thought it up does not substantiate the claim.

Dick, the problem I'm having is that you seem to be saying, "it is wartime, so whatever the government wants to do is just fine by me. I'm willing to give up my rights without question. I'm willing to "sacrifice" without question. I'm willing to let the government lock up anyone they want without question. I'm willing to do whatever the government wants, again without question."

But that should never be required of a free people in a free country. We should never just sit back and do whatever the government wants without question (even in wartime). If we do, we have truly ceased to be a free people in a free country.

Nobody is saying that we should never sacrifice, never stand up and fight, or never listen to the government (I'm certainly not saying that). But, before doing any of those things, we should seriously ask if it is truly necessary for national defense. If it isn't, then the government has no business asking us to do it and we should darn sure be asking questions (at the very least).

Your message is exactly the point I've been trying to make (we're losing all perspective). How are troops at my local small town shopping mall going to change anything for the families of the WTC attack? How is press censorship nationwide going to change anything for the families of the WTC attack? How are police searches in my town going to change anything for the families of the WTC attack? How is expanded police powers nationwide going to change anything for the families of the WTC attack? Stop waving the families around like some banner in a war on our rights.

Whether you like the idea or not, the attack on the WTC is a New York problem. It didn't happen here or anywhere else. Now, the rest of the country can certainly "feel" for the victims in New York, and send what assistance we can. And the authorities should do whatever they can to make sure another attack like that never happens again in New York. But to start stripping us of our rights here, when nothing has happened here (and is not likely to happen here), is simply not what our government should be doing. There has been no threat to a shopping mall here, so why are troops in those malls? There has been attacks here, so why are police stepping up their search of vehicles here? There has been no attack here, so why is Congress passing legislation to massively expand police powers here? Such a widespread response to a single incident in a single town is not warranted.

Oh, so well said, Cecil. If we start stripping rights every time there is a "war," there will be no rights remaining because there is always a "war" on something in this country.

If it stops another slaughter, then it';s worth it. Only TIT's is waving
the families around. If it protects out troops by not telegraphing some
piece of information then it';s worth it. Stop being a selfish little
boy. If it catches one of these Islamic madmen before he can crop dust
YOUR town, then it's worth it. Stop acting like you are in pre-school.

Nothing is going to change what has happened, by by gosh, I hope it will
prevent it from happening again.

Really doofus? Check the stock market fool. Check the status of the economy AFTER the attack and tell me how NY doesn't affect the rest of the country. Check the number of container ships that AREN'T unloading in NY harbor and then get back to me when you hemorrhoid cream runs out and you can't find any.

Check the prices of things like insurance that will go up and YOU'll be paying the price along with everyone else. With 18 months, the price of homeowners, including your trailer insurance will go up 30%. But NOOOoo, what happen in NY won;t affect you will it Dwight??

You can't be this stupid..then again.....

It didn't happen here or anywhere else. Now, the rest of
> the country can certainly "feel" for the victims in New York, and send
> what assistance we can.

I'm sure you're all busted up, you little self centered shit.

And the authorities should do whatever they
> can to make sure another attack like that never happens again in New
> York.

Lemme see. Florida isn't NY and Washington isn't NY. Chicago isn't NY either yet they're all experiencing something.

But to start stripping us of our rights here, when nothing has
> happened here (and is not likely to happen here)

Things have a way of happening. Sure would be great to have them happen to you and see what little whinny dance you do then.

, is simply not what
> our government should be doing. There has been no threat to a shopping
> mall here, so why are troops in those malls?

Hmmm, seems that the Mall of America was a potential target. Seems that malls attract large numbers of people and that would make a great statement for bomber. Asshole!!!!!

There has been attacks
> here, so why are police stepping up their search of vehicles here?

Why not join the enemy, you seem hellbent on helping them.

> There has been no attack here, so why is Congress passing legislation
> to massively expand police powers here? Such a widespread response to
> a single incident in a single town is not warranted.

What a fucking asshole. I hope something happens, but only to you and your family. Then we'd all feel safe knowing that you "share the NY'ers pain" Go stick your head in the sand, Better yet, why not get together with TIT's and stick your heads up each others asses.

You are rapidly replacing Lennie Anderdick for the title of king fool.

"We?" Have you been alive for two centuries? Don't give yourself that much credit - your political views are not what has held this country together for two centuries. If fact, if your political views (blind obedience to government, etc) ever became widespread, I doubt this country could stay together for two months.

Dick, did you miss Vietnam, Panama, Grenada, Iraq, and so forth? You must have if you think your generation is the only one who has ever had to face a conflict. Stop your delusions about your generation versus the other generations (no generation is that superior to the other).

Superiority is an arguable issue but difference is not. There is and has
been a notable difference between those of us born before the end of WW2 and
those born later. It is also not uncommon for a given generation to have
more in common with its grandkids than its own kids.

Miss the Nam? 25-30-43-690. I did not serve there, thank the gods.

I will expect the present jr hi kids to give their parents the enema they so
richly deserve.

At which point, person mistaken for a liberal pulls out gun and shoots you in the face. And while the blood is slowly draining from your body, person mistaken for a liberal reminds you that war is not about people punching each other - people kill each other in war and dead people have no understanding, no liberal or conservative politics, or anything else.

> 8) Repeat steps 5 through 7 until he

Not true, Dick. If you make a specific defamatory accusation against a specific person, it is your responsibility to back it up with fact (not the person defamed). If you cannot do so, it is defamation and defamation is the very definition of legal slander or libel.

Have you been listening to the news at all, Jack. Nobody, and I repeat NOBODY, is talking about anything having to do with "our troops." We're talking about the recent "request" by the White House for news agencies to censor the comments of the Taliban. And we're talking about the military urging the press not to cover the attacks in Afghanistan (not "our troops").

> If it catches one of these Islamic
> madmen before he can crop dust YOUR
> town, then it's worth it. (snip)

How are either of the things I just listed going to catch anyone? Pay attention, Jack.

Another person who obviously doesn't know the WTC was in New York. Trust me, the WTC was in New York. The WTC was attacked in New York. The WTC was not attacked anywhere else. Are those ideas too hard to understand, Jack. The stock market, economy, and so forth, are the aftermath of the WTC attack. The aftermath of the WTC attack is not the WTC attack, Jack. Got that now, Jack?

> I'm sure you're all busted up, you little
> self centered shit.

Look, I don't have time for your games. You want to twist what I've said and then call me names because my now twisted comments don't fit your own little agenda. Sorry, my friend, I have better things to do.

> Lemme see. Florida isn't NY and Washington

And, if there is a viable threat to that mall, the authorities should do whatever they can to protect that mall. But censoring the press is not going to protect that mall. And neither is limiting access to information to Congress. And neither will massive expansion of police powers to wiretap.

> What a fucking asshole. I hope something
> happens, but only to you and your family.

Oh, so now it is violence on me and my family. Last message to you, my friend. I only talk to civilized human beings.

First of all, the troops are no longer at the local malls (just the airport and bus station). However, if there were a threat to any one of those malls, I would never advocate troops in those malls - we have police to do that type of work (it's not the military's job - they do not have the training to be police officers). And if there was a viable threat to any one of those malls, I would expect the police to do their job.

As for searching vehicles, it is absurd to conduct random searches of vehicles because there MIGHT be a possible threat. If we accept that logic, then we should just throw out the words in the Constitution that say, "the right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated.." Searching random vehicles because there MIGHT be possible threat is unreasonable (there is always a possible threat of something, so there would never be a time when a search is not warranted - which is not what our forefathers intended when they wrote those words).

5788. Do I need to learn Morse Code for a ham license?

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-16 05:31:00 UTC
From: kr1b@hotmail.com
Message-ID: <58c72dcf.0110152131.3ae75343@posting.google.com>
Source record: 21979

After listening for many years to amateur radio (and SWL) on HF, this hobby seems like it might be kind of fun to join...

I heard the Morse Code requirement was dropped altogether. But from searching these groups, it looks like there are three licenses (Tech, General, Extra) and is a 5wpm requirement for the top two requiring the 5wpm code proficiency.

Can anyone clear this up? (No the FCC web site seemed useless on this)

How hard are the tests? (I know this is a subjective question, but if someone could characterize the exams that would help, are they mostly about electronics or about the rules, for example)

Thanks

It's not self pity, Dick. Nothing bad has happened to me, so why would I expect pity? I'm simply expressing a concern for the future of this country - the rights of this country's people. If you were not so self absorbed, you might have more concern for the nation also. Instead, you're satisfied to just sit back and let the government do whatever it wants. No effort at all to do that, is there, Dick? It doesn't take much effort, or bravery, to goose step without question to every whim of a government. Anybody can do that - to be free requires more.

Oh, I understand now. As long as it happens to "those" people, it is
okay. Well, that makes all the difference. Why didn't he just say so?
Of course, "those" people don't deserve any rights. It's okay if it
happens to "those" people. Hey, wait a minute, am I one of "those" people?

Obviously, most of us like ham radio. It is an interesting hobby,
with lots of options to try (which means you won't get bored quickly).

> (snip) But from searching these groups,
> it looks like there are three licenses
> (Tech, General, Extra) and is a 5wpm

That is exactly right.

> could characterize the exams that would
> help, are they mostly about electronics
> or about the rules, for example).

They are entrance exams, so they contain basic questions about
operating rules, procedures, radio fundamentals, electronics, and so
forth. You can read more at...

http://www.qsl.net/w5net/how_to/intro.htm

...and about how to get your own license at...

http://www.qsl.net/w5net/how_to/how_to.htm

...and take a few practice exams at...

http://www.hamstuff.net/hamexam/

If you have any more questions, feel free to ask.

Yeah, and there are lots of people around today who would apologize for Hiroshima and Nagasaki, too. Harry Truman was right on. You have no idea how many of those interred may have been subversive. And the government apologized for me, they know I had nothing to do with it. How many slaves have you ever owned? You're responsibile for slavery,150 years ago, you know.

Boy you are an absolute master at talking out of both sides of your
mouth. You are perfectly willing to give yp rights for the common good
in wartime, but you don't believe it is ever justified to have to do so.

What a guy! I sure hope there are not many like you around.

All these decisions can't be made by each individual, Dwight. You have
no idea what the President or Sec Def knows about what is truly needed.
So you would reserve the right to overrule them and decide for yourself.
We see. And we are not surprised.

Kris:

You will need to pass the 5 wpm morse code test to get your General or Extra license (or the Tech Plus). Without this (that is, with a Tech license) you will be limited to VHF and above (50 Mhz and higher).

I just sat for the exams on Oct 6. The Tech and General exams were quite easy; the Extra was much tougher -- but,the Extra privileges are rather minor, the big jump is Tech to General.

The code test was easier then I expected. In order to pass you have to do ONE of the following (you get to try both):

1) produce 1 minute (out of the 5 minute test) of clear copy. That's easier then it sounds. If
you get the callsigns of the sending and receiving station, you are more then half way
there for example -- and, the callsigns are sent twice (once at the beginning and once at
the end.)

After copying the code but before turning it in, you are allowed to correct it. So, for
example you have copied: "My r_g is a Kedwoo_" you could change it to "My rig is a
Kenwood"

2) Answer 7 out of 10 correctly in a fill-in-the-blank test on the test transmission.

The written tests are all multiple guess. The questions are a mixture of rules, safety and theory. The safety ones are mostly common sense as are some of the rules. Some simply require memorization (there ain't no such thing as "understanding" that General privileges
on 40-meters include 7025 Khz to 7150 Khz and 7225 Khz to 7300 Khz -- you simply memorize it). The theory questions on the Tech and General tests is mostly basic stuff. With my vast technical expertise (a History major who had to buy a screwdriver to install my antenna) - and the fact that I haven't taken a test of any sort in about 30 years - I managed to pass and so will you with a little study.

Good luck!

That is nonsense, Dick. Read the Bill of Rights. They are supposed to be absolute, not something that can removed at the simple whim of the President (the Secretary of Defense you mention has no authority in this regard whatsoever). Furthermore, if there is a need for limited restraints on those rights, there is a legal process to use (it's called Marshal Law). Short of that, this is a democracy, not a dictatorship, and we have certain rights as outlined in the Constitution. One of those rights insures us of a right to speak out in defense of those rights. When we fail to do so, the only possible result is the complete loss of those rights. And that is exactly what is going to happen if people continue to sit back and allow those rights to disappear without even so much as a whimper.

>what they do and probably better.

Actually, ham radio operators are very much of use here, where
I live. The main repeater in this area is tied into the National
Weather Service and EMA, and are put in alert mode every time there is
severe weather. We have a lot of tornados around here, and phone and
power go out during the worst of them, with ham radio operators
calling in all of the damaged areas to get the work crews back out and
utilities back up as soon as possible, and medical care provided where
needed as soon as possible. Cell phones don't tend to work too well
when there is no power to run their repeaters or their towers are
ripped down in a tornado. I don't know why ham repeaters tend to
survive the weather better, maybe because they tend to be built by
hams that care about their equipment, not by a company that figures
they can just send a truck out to fix a problem sooner or later.

Ham radio operators DO serve a purpose here, and everywhere
else, I imagine.

Have you noticed that all the whinny "we're losing our rights" crybabys seem to be from Texas?

Cecil, Dwight and TIT"s all hail from the state that brings you equal opportunity death penalties. HMMMMM

You got Dwight who cries about some guys in Army suits..unarmed guys in army suits walking around his mall. Funny how HIS mall seems to be the only one in the US being patrolled by National Guard though. You'd think that some of the major malls like The Mall of America that WAS targeted by the terror its would have National Guard units patrolling it, but they aren't. You have Dwights little town having National Guard roaming the streets when cities like NY, LA, Atlanta don't even have the happening. They're in the airports, the bus station, the train stations, etc, but they're unarmed and certainly NOT wandering the streets.

Makes me think Dwight is a tad over exaggerating. His "little" town is a scene right out of Red Dawn. Look out Dwight.....Black Helicopters. Look out..here comes Boris and Natasha. Hey Rocky..nothing up up sleeve ROARRRRR must have been the wrong suit

You have TIT's complaining that people are listening to her phone calls and such. Guess that cuts into her 1-900 phone business.

And then you have Cecil who argues for the sake of such. Now out of the blue, his Mexican born mother suddenly sprouts a German surname. Amazing..a story for every occasion. What next?? We find that old Cecil is really Muslim??

And here's the rub, they have yet to mention any specific rights they have lost!!!!! Oh my gosh..generalities and fallacies to date, BUT NOT CLEAR FACTS.

They'd prefer to have some soldier put into danger so that they can play armchair general. They prefer to hide their pointy empty heads in the sand because "it's no my problem. It's NYC and Wash, DC's problem".

He's what we do. Right your Congressman. Tell them that Texas should be declared a rights zone. Put all the whinny crybabies in Texas, cut off all access to the rest of the world. Make Texas total autonomous and totally self sufficient from the rest of the US and the world and then sit back and watch Texas turn into another Afghanistan.

Hooo Boy would that be great or what??

POSSIBLE THREAT. Oh that's right. It's a NYC thing, not s dinkwater backward town like Conway TexASS

Better the next car bomb goes off next to you Dwight. I know I'd feel better seeing that they target you family than mine.

Funny, how did you feel when they randomly stopped the Terrorist in Portland Washington during the 2000 New Year celebration with a carload of explosives headed for LAX? I'm sure you were outraged that this person was randomly prevented from killing innocent people.

The rules change during times of war. deal with it. Better yet, support the ACLU. There's a group you seem to identify with

nope Dwight, they go hand in hand DWIGHT GOT THAT DWIGHT The latter has
a lot to do with the former. But you forgot DWIGHT, it's a Washington DX
problem too. You forgot to slam the dead from the Pentagon attack as
well...DWIGHT Got that DWIGHT

But DWIGHT, why would anyone want to both with your little town. It's a NY thing, according to you

Guess that excludes both of us and then again most of us.

Well, better you than me. I feel a tad safer seeing those National Guard people. Just like cockroaches, the terrorists will look for places with less protection. Better they move toward you then hang around near me

Submitted for your approval:

Suppose someone really hated Morse code, ham radio and all its traditions, accomplishments and other good stuff. One way for that person to hurt the ARS would be to get hams fighting among themselves and behaving in ways that are less than exemplary. Then the person could say "see how hams act?"

Ever see the Disney movie "Lady and the Tramp"? There's a scene where a visiting aunt brings her Simese cats with her, and they proceed to tear up the house. But they do it in such a way that it looks like the dog (Lady) is the guilty party. It's an old, old trick.

Most any weekend you will see a few National Guard types coming and going, and stopping by the mall enroute to or from home. That's probably what Dwight is seeing, and we already know how well he understands things.

Plus presidents ranging from LBJ (ugh) to both Bushes.

Cecil is the only genuine native Texan in Texas in the bunch. Kim is originally from New York. I dunno about Dwight, but I remember him mentioning moving to the Pacific Northwest a short time ago. He was previously in SC.

Possible reason for the high visibility of some military activity in those areas: They are border states. Just because the USA has upped security and airline safety doesn't mean everybody else has.

Back in '99 an alert border official near Seattle stopped a guy driving in from Canada because he "looked funny". Turned out the car was actually a bomb (literally) and the guy was an Algerian heading for LAX for Y2K. The Algerian is now "in custody" and "cooperating" with federal authorities.

With that logic, the entire population of the US should
be locked up. But wait, you have no idea how many of
the prison guards might be subversive so they have to
be locked up also. Egads, even the warden might be a
subversive so lock him up. Seems to me, you simply hate
people who are different from you in some way that doesn't
matter. If the constitutional rights of American citizens
can be violated because of the way they look, or the
spelling of their last name, or their religion, then
you and I have NO constitutional rights.

> You're responsibile for slavery,150 years ago, you know.
Dick, I come from a long line of indentured servants.

They didn't even own any land much less own slaves. They
worked alongside the slaves and lived in shacks just like
the slaves. Unlike the slaves, their food was not furnished
by the landowner and they had to grow their own or starve.

Independent as in stolen from Mexico, if I remember my history correctly.
A proud statistic in yur book I'm sure

I noticed that in the honor Texas has in executing more people in one
year than anyplace else on the face of the earth. A proud statistic in
your book I'm sure

So tell me Cecil, what fantastic stories can you make up now about
what';s going on. We have a Mexican/German mother.

Oh yes, to answer a question as to why Japanese and not Germans.

1 is the fact of the surprise attack on Pearl Harbor that actually drew
the US into the war.

2 was that as a group the Japanese were easily identifiable vis a vis
racial profiling. It's hard to pick a German sympathiser out of a crowd
of White Anglo Saxon Protestants.

I wonder if Gud Ol Boy Dwight can paraphrase what the founding fathers
said should happen in the event that madmen commandeering airplanes
decide to crash them into tall buildings.

Perhaps Dwight might read what the Supreme Court had to say about random
searches of vehicles..HEY DWIGHT, they said it was allowable. Random DUI
stops are legal as well. Heckfire DWIGHT, the supreme court just stated
that police no longer need permission to search your car if they have
suspicion. But then again, driving a car is a privilege and not a right
as guaranteed by either the Bill of Rights or the Constitution, so all
the rules need not apply

Besides looking for terrorists with bombs and BIo-toxins IS REASONABLE in
the extent of the beloved constitution. For failure to find them or do
anything about them violates the precepts of life, liberty and the
pursuit of happiness. Can't have any of them of you're dead. ;-)

Check and mate

This is a non-reply to illustrate some of the sociopathic behavior exhibited by the distrubed. It is a form of personalized terrorism that disturbed individuals pursue.

According to Pacific Bell security, there were seven calls from an unidentifiable telephone number (pay phones are not identifiable in this service area). All other calls into our residence telephone were checked out and verified. Perhaps the telephone security folks did a recording? There were hints that they did.

My wife and I were in another state during May and June but this pseudonym-hidden individual did not know this nor of our planning that trip three months prior. The Los Angeles Police were notified of a "stalker" situation and copies of previous newsgroup messages presented to them and reviewed by the special LAPD unit handling stalking messages. Pacific Bell was advised and monitored our residence line. Our neighbors were notified and our residence was observed for any strangers or evidence of criminal activity both inside and out. There was none and that is a good thing...but there is still a record of telephone contact attempts and a file with the LAPD.

This individual, who would later surface as the potty pseudonym of "Jack Mehoff," claimed to have taken "photographs of the QTH" and other close areas. From phone records this person never got any closer than about 34 miles. Calls were all from

the same 714 area code number in Orange County. No neighbors noticed anyone photographing our house. If anyone "needs" such photographs I am able to supply digital images as an attachment to private e-mail. No charge. Ask nice.

Discussion, debate, and argument is one thing. STALKING and threats of harm, or even wishes for harm against another is a totally different thing. It is a form of personalized terrorism for whatever maladjusted reason... hardly different from the motivations of those religious-sect fanatics committing Mass Murder in the USA.

Personal amateur terrorists aren't aware that someone is watching them and know them. They cannot hide.

>
>No, Stewart, war really sucks. I've been to a couple of them, punk,
>and that's why I'm happy to see my governor call out the National
>Guard to help protect my homeland.

Perhaps Brakob would like to relate his war stories of heroism in battle against the enemy that justifies such statements of leadership, battle, and hewing-the-longtimer-line?

This morning a couple of Air Guard F-16s and a support aircraft landed at BUR in the eastern San Fernando Valley. Their purpose is to provide Fighter Cover on civil airways, to be ready to shoot down any air carriers determined to be hijacked-as-weapons-of-destruction.

On September 10th the idea of USAF or Guard fighters aloft as Fighter Cover over USA soil was absurd. It is still absurd but in a different way...and that different way is what I read into Dwight's messages.

>Oh, I forgot, it's a New York thing, isn't it. We shouldn't have
>to worry. What a pathetic American you turned out to be!

Perhaps Brakob likes militarism and martial law? Perhaps he likes some home-grown STASI checking "papers" at checkpoints? I don't. But then I'm one of those "punks" you name (in some kind of disgust) as un-American, un-patriotic because I still believe in the Constitution and some amendments to it called the Bill of Rights.

Some time ago I took an oath to defend the US Constitution. That must have been as a "punk" in 1952, wasn't it? I'm sure you will think so, being the mighty career military man who has "been to wars" (plural). I still support that oath, Master Chief Brakob...but your having "been to wars" doesn't give you any sort of rights to call other military veterans names. I've been to only one war as a participant. I didn't like it, still don't, but I volunteered for it.

Now let's hear some talk about morse code being "patriotic"
along with hewing to old-time-traditions-of-ham-radio as a
further expression of being "American." Advocacy of changing
regulations of a hobby radio activity must be considered
"un-American" isn't it? Maybe it's even "punkish?"

An excellent description. [tip of the hat for that]

That conceptual model provides a visualization and better
relation to complex quantities...and is the reason it is
still being used today. So much so that it appears on
modern network analyzers as the front panel display.

>While it is necessary to move forward in technological
>development, I believe it is also necessary for the

Vacuum tubes, slide rules, and steam engines...along
with morse code skill...are becoming artifacts which are
quaint, amusing relics of a bygone era. The Smith Chart
format still appears as the display on modern network
analyzers and is still being used by today's RF workers.

Er, sorry to mention morse code in there. It's not partiotic
and may be un-American to not love morse code. I've
been told that by real, true-blue Amateur Americans.

>less than exemplary. Then the person could say "see how hams act?"

Advocacy of the elimination of the morse code test...which still
exists for under-30-MHz privileges...is not "terrorism."

What is exhibited here by Jimmie Miccolis and company is
a false equation of:

Old-style-amateur-radio = Patriotism-Honor-Integrity.

FALSE EQUATION

Apparently the old-style-amateur-radio types have their
lifestyles so wrapped up in their hobby that they cannot
debate, discuss, or even argue on anything less than
"all must cherish and honor the things that these old-time
amateurs love and cherish" or be labeled a traitor,
subversive, or an enemy of the people of the USA.

This has been evident in here long before the terrible,
monstrous Attack on America of day 9-11.

>The way subversion and terrorism work is to turn a society against itself,
>using its own tools and strengths.

"Subversion and terrorism practiced by a 'society'"
is to keep forever the regulations, traditions, and
brainwashing of a hobby activity...to forbid any
rational argument about it, to brand all that don't
think like the "community" with all manner of
pejoratives, to accuse them of terrorism in the
name of amateur radio. GET A LIFE.

Probably don't have enough to cover all the high-value,
terrorist target areas in the US _AND_ stay on top of
Afghanistan/the Middle East at the same time. We're
stretched pretty thin right now. And we need AWACS
because the next time the bad guys pull an airplane
trick, it will be down on the deck, out of radar sight
for the ground-based FAA sites.

But, yeah, it gives me the One-World Globalization
willies too.

But when you think abiut it, there are a whole lot more of them than
us, and if we don't make good alliances, we'llhave to face some good
ones that WILL have us outmanned and outgunned.
That is NOT to say that we should bow to *anything* voted by the UN.
That flawed organization badly needs overhaul but it will never happen.

"Police, firemen, guardsmen, and other patriots" were doing that
before September 11, 2001.

How is today different? We cannot exercise our freedom of
speech?

No, apparently we can't. We must obey martial law orders from
self-appointed "patriots" who talk "tough" as if only They know
what is best for the citizenry.

>Not a single one of your rights and damned few of your privileges are
>affected by our war on Bin Laden-et.al, yet you give them aid and comfort
>like a modern day Jane Fonda.

The "modern day" Jane Fonda is into religion after having
married into millions. Perhaps Brakob wants to rule on
what religion to practice in order to be patriotic? !!!

Oh, I see: Suppression of the right of free speech is
PATRIOTIC! Everyone has to be a fundamentalist,
martial-law supporter in order to be "American." Yes!
Silence all who oppose an opposite viewpoint!

Meanwhile, there are two Air Guard F-16s ready to scramble
at Burbank-Glendale-Pasadena Airport...to shoot down civil
airliners if the need arises. Does Brakob find that thought
pleasing? Aren't those fighter pilots bravely fighting to keep
our civil rights?

I was wondering the same thing, but _something_ must be bad about it
now, because Dwight Stewart sure seems disturbed that the police,
firemen, and National Guardsmen are doing their constitutionally
appointed jobs.

Go figure!

Hans

"Stolen"? Was the US stolen from England? The Texans fought for
their independence just as the American colonists did for theirs.

> 1 is the fact of the surprise attack on Pearl Harbor that actually drew
> the US into the war.

If I remember correctly, that act was performed by citizens of Japan,
not citizens of the US.

> 2 was that as a group the Japanese were easily identifiable vis a vis
> racial profiling. It's hard to pick a German sympathiser out of a crowd
> of White Anglo Saxon Protestants.
My point exactly. How someone looks has nothing to do with what

someone believes. The interring of innocent American citizens during

WWII has gone down in history as an American atrocity.

When I first became involved in electronics, slide rules were the one absolutely necessary calculation tool owned by every engineer and technician. They were simple, uncomplicated, easy to use (after some period of rather tedious practice), and delightfully low tech. They were the calculation tool-of-choice for over three centuries.

Then, as the giant asteroid was to dinosaurs, overnight the $9.95 pocket calculator killed the slide rule. Despite it's ubiquity and utter simplicity the mighty slide rule went extinct in less than a decade! Perhaps somewhere, in a backward company in a backward country without sand from which to make silicon chips, a group of stalwart engineers still treasure their Pickett or K+E slipsticks, and still require a practical examination, down to the third significant digit, of an engineers proficiency, and whether they actually could explain the difference between the CIF and DIF scales.

Perhaps some amateur mathematicians still are proficient on slide rules (after all, they haven't been outlawed!). I bet they even hold speed and accuracy contests at a nostalgic "Slippers" convention each spring in Akron, Ohio. Led by the scratchy but firm voices of their oldest club members, Vince Bentupcursor and Larry Elscale, they close each convention by quoting the 1940's fight song of that bastion of wood-assisted math, Cal Tech:

"E-to-the-x du dx, E-to-the-x dx,
Cotan secant tangent sine,
three point one four one five nine.
Square root, cube root, QED
Slipstick, slide rule, Hooray! CT!"

The next SLIPS newsletter duly reports the resolution of the IEEE BoD to gain legislation to include slide-rule competency testing as a requisite to all engineering degrees, except those seeking 2-year Stickless Technician degrees. Regular Technicians will require 5CPM (Calculation Per Minute) exams, BSEE will require 13CPM, and MSEE will require a 20CPM exam.

On another front, when I first became involved in amateur radio, Morse code was the one absolutely necessary communications mode used by every ham. It was simple, uncomplicated, easy to use (after some period of rather tedious practice) and delightfully low tech. It was the communications mode-of-choice for over three generations.

Then, as the giant asteroid was to dinosaurs, overnight.....

With all kind wishes,

de Hans, K0HB

This is the same "Stevie Boy" who got his sorry ass kicked off of 3.950
for being too much of a "loose cannon" (imagine that !)

He also used to check into the Eastern Regional Patriots Militia net
that used to meet on Mon, Tue, Thur nights on 3.860 LSB at 8:00 PM
Eastern time, until he surrendered his ham licence (aa8dp)
to Reily Hollingsworth.....because he believed the FCC was an
"..agent of the (zionist) occupational UN government".

Someone said he also had a webpage that stated this
kooky claims of his, but we can't find it. Oh well no loss.

Looks like we have here yet another real genuine radio militia gun-nut screwball eh folks?

Hopefully the Kentucky State police will put this fruitcake into a pine box six-feet
underground
very soon!

Then if it's so terrible in Conway, SC, why are there so many out of state
cars thru there during
the summer? Would it have something to do with Myrtle Beach? Snide remarks
about the South
are usually made by people who've never been here, and the ones who DO come
here we seem to
have a hard time getting rid of them. So if you DO come to SC or some other
part of the South of which you speak and know so little, don't let the door
hit you in the butt on the way OUT. Oh, BTW, while you're here, I'd keep
quiet in front of those "mens what are mens" lest ye be given
a good old fashioned Southern a** whuppin' fer a-lettin' yer alligator mouth
overload yer canary
a**! LOL! Y'all take keer, yuh heah! LMFAO!!

> Afghanistan?

Depends on how you define the "area," Dick. We have a CBG in the Pacific Ocean that normally patrols that area. We have a second CBG that is now engaged with Iraq. We have a third CBG that was moved from the Mediterranean to back up the primary battle group. And we have the main CBG for this engagement that was dispatched from the US. So, yes, we have four CBG's in the area if you want to count the entire Western Pacific Ocean and Indian Ocean (including the group already engaged with Iraq).

And, yes, considering the capability of our military, this is indeed a small engagement against a country with a very limited military capability.

We've already been told, warned, and warned again that this will be a "very long and protracted war." If this "war" (undeclared mind you) goes on for just 20 years, an entire generation of children will have no idea what it truly means to be free. It will be foreign for them to understand a day when people could be on the phone or email, and not be monitored (if it truly comes to that).

Well, we're getting too side tracked with this relatively minor issue, but just I cannot let it go without any comment. I agree with you that our AWACS capability might be stretched thin at the moment, but our defense of US airspace has never depended on AWACS aircraft in the first place. We have a wide range of military radar systems around the country that can watch anything in the air (including something flying low enough to dim it's headlights for passing vehicles). In addition, we have satellites to back up that radar capability, tactical radar on the jets flying over the intensely protected areas, and radar aboard the ships now patrolling the major ports and coastline. When you add in the FAA civilian radar to that picture, the use of AWACS aircraft is just a "little" redundant.

I just noticed what you mean. I guess I'm a little too trusting. When it comes to situations like the one facing this country now, I tend to trust that others in the discussion have an equal concern for the situation. Obviously, that is not always the case. Thanks for the heads up, Len.

Isn't this amazing, Cecil? Would you have ever thought that arguing in defense of Constitutional rights would get people this angry (angry enough to wish harm on a person)? When I started this thread, I had no idea that so many would be opposed to it. I guess I now have an answer to the "where did my America go" question.

What things, Hans? The things your advocate we should not have today - freedom of speech, freedom from unreasonable search and seizure, and so forth? Those "patriots" are not "putting their lives on the line" so the government can strip away our rights (or so people like you can advocate that). If you don't believe me, ask them.

> (snip) yet you give them aid and

Hans, show me one airport in this country that was patrolled by National Guardsmen prior to the WTC attack. One bus station. One train station. What bill was proposed in Congress to expand police powers to wiretap prior to the WTC attack? Show me an example in recent years where the President has restricted access to information by members of Congress. If you think things have not changed since the WTC attack, then you have simply not been paying attention.

Hans, the Bill of Rights is not limited to just the ACLU - many conservatives, such as myself, support it also. And my support is not limited to just the 2nd Amendment - the entire Bill of Rights is equally important to me.

Was that wars where you went around punching each other? Is that what you expect the National Guard personnel, untrained in civil law enforcement, to do when something goes wrong? Sorry, but I don't want a member of my family to be mistaken for a terrorist by one of those untrained National Guard personnel? I would rather have trained law enforcement personnel in those situations.

Your right Dwight, I stepped over the line. I don't really wish harm to you or your family, BUT you have certainly wish harm to mine. For want of the ability to see some goat humping billionaire madman on TV, you'd rather put my family in harm's way? I don't follow that at all. What difference does it make to you whether or not they show his ugly face or broadcast his words? If you must hear him, go to the Internet. The Al whatever its called it broadcast on the Internet.

Why do your rights preclude mine? Why should I have to work and work in NY!!!! in fear so that you can drive your pickup to the local mall and shop at Sears? Is it because it's a NY thing as you stated?

Well friend, once NY is gone, they'll be coming after you (figuratively speaking)

You can play ostrich all you want, but if I can take the train to work and see soldiers standing watch, I'll feel a tad safer.

If the authorities want to do random searches, so be it. If they stop 1 person who can hurt my family, so be it

BTW, did you ready about the Portland Me Muslim group that has declared Jihad against the US?? It was in the papers. They have vowed to bring the fight again to various parts of the US. They're US citizens Dwight..what should we do with them? They seem to be hiding behind the very laws you wish to keep in place during this time of war.

What about all the terrorist cells that have been found in small towns throughout the US Dwight. Towns just like yours. What do we do Dwight. According to the Manny Moe and Jack of rights (the Texass boys and gal), they should be allowed free access of the citizens of this country because the Constitution allows it?? I dun think so Lucy

Just wait Dwight. Sooner or later, they'll find your small insignificant town and then they're be no one left to cry in your skittles and beer with you

Reported from the Del Rio Gazette in that Belt Buckle of the Bible Belt...Del Rio Texass

Don't go to the bathroom on October 28th!

CIA intelligence reports that a major plot is planned for that day.

Anyone who takes a crap on the 28th will be bitten on the ass by an alligator.

Reports indicate that organized groups of alligators are planning to rise up into unsuspecting American's toilet bowls and bite them when they are doing their dirty business.

I usually don't send emails like this, but I got this information from a reliable source.

It came from a friend of a friend, whose cousin is dating this girl, whose brother knows this guy, whose wife knows this lady, whose husband buys hotdogs from this guy who knows a shoeshine guy, who shines the shoes of a mailroom worker, who has a friend
who's drug dealer sells drugs to another mailroom worker, who works in the CIA building.

He apparently overheard two guys talking in the bathroom about alligators and came to the conclusion that we are going to be attacked.

So it must be true!

Don't crap on the 28th!

Hold it in!! (shouldn't be hard for Lennie..according to his wife, he's full of crap)

That was the case when I wrote my first message to this thread. As I've already said several times, that is no longer the case - only the airport and bus station now have National Guard personnel. Of course, you already know that because one of the times I've said that was in a direct response to one of your messages.

> And here's the rub, they have yet to
> mention any specific rights they have

The other way around, Jim. I was in Washington and moved to SC. Of course, this is only temporary (if you can call a year and a half temporary). We first came here because of a family crisis. However that stretched out longer then we anticipated, so my wife eventually registered at the local college. Now that the family situation is over, we are still stuck here waiting for my wife to finish her courses. However, that will change in December (we hope), and then we'll either head back to Washington or Florida (finally!!).

Sadly, New Years celebrations in Seattle were canceled that year because of that incident.

If we have to make our society as repressive as theirs to beat them, we will not have beaten them. They will have beaten us. To quote a great man, "A society that is willing to give up freedom for security will wind up with neither."

Your "solution" is exactly what Osama bin Laden is praying for. If a handful of terrorists can cause American citizens to lose all of their freedoms, I feel sorry for my grandsons.

You're probably right. It is amazing how easily rights slip away.
Most people today don't even remember when it was considered illegal
to search a vehicle, a purse, or a briefcase, without a warrant issued
by a judge. Rights are so hard to ever get (a revolutionary war) and
so easy to lose (one Supreme Court ruling or one bill in Congress).

Dick, nobody other than you has mentioned anything about capitulation. All of us are aware of the need for national defense, and even a strong national offense when the situation warrants. But that should never extend into turning this country into the very thing we insist we're fighting - a society as repressive as theirs. If that happens, they have succeeded in defeated everything we stand for - the very ideals which makes this country unique.

And, as far as your concept about allowing them to "use of very system to destroy us," if our system is that weak, that venerable, then perhaps you're right - our system should be changed or even eliminated. But, I will never believe that our system of government, our system of citizen's rights, is that weak. Those have stood for two hundred years - lets not let a madman strip that away.

Dwight the Fright doesn't believe that an attack onNew York affects him in South Carolina, even considering the DC attack simultaneously. Wonder what he'd think if he had been visiting the WTC or the Pentagon that day.

What you aren't smart enough to understand is that you are playing right into the hands of the terrorists who have already proven conclusively that they can use our free and open society to beat us if we allow it. And ONLY if we allow it.
As in a number of previous instances in wartime, our leadership, recognizing this fact, has moved to forstall it by placing some minor but effective limitations on our usual open and free interchange. If you can't understand the importance of these minor inconveniences I truly feel sorry for you.

But not too sorry- you are helping the enemy. That's aiding and abetting.

Precisely- and the way to stop it is to move effectively, by making it possible to catch them. That means several changes and some sacrifices on YOUR part as well as mine. Sorry you can't underestand that.

Why do you insist that Dwight's beliefs *mean* that he desires to put your family in harm's way?! That's not even logical. You sustain an argument that way, because he could then use the argument that your beliefs mean he has to "do something" for you?! Just because someone believes a certain way does not mean they are "with the enemy" you perceive.

>
> Why do your rights preclude mine? Why should I have to work and work in
> NY!!!! in fear so that you can drive your pickup to the local mall and
> shop at Sears? Is it because it's a NY thing as you stated?
>

I don't think Dwight thinks that his rights "preclude" anyone's--yours or otherwise. Why should your rights "preclude" his? Freedom, and life in America especially, is all about compromise. We each compromise in order to facilitate a little of the other--along with those things that become the debates of the century where noone will budge. Not budging is what leads people to despise, hate, and demoralize what this country is all about.

>
> Well friend, once NY is gone, they'll be coming after you (figuratively
> speaking)
>

And, you know that even figuratively that is just hogwash. NY is not going to be gone. A counter example to your comment above is that when the KKK wins their argument with "other races" down here, they'll win all over. It ain't going to happen [them winning their argument]. But, you know what they win in the meantime? I will openly challenge their beliefs, but it truly scares me to think of the vengeance of some of them--they win in that respect because it limits my desire to argue with them.

>
> You can play ostrich all you want, but if I can take the train to work

>

Your decision to ostricize someone because of the way they think is so ugly. And, to many of us, it is more anti-American than you even realize or you wouldn't do it.

>
> If the authorities want to do random searches, so be it. If they stop 1
> person who can hurt my family, so be it
>

Then, you had better start asking for higher taxes, because the common criminal on the street is more harm to your family than anything else. Hell, if you'd seriously sit down and figure out how much the drug culture has actually impacted your and your family's life, you be chewing nails. You choose not to get upset at the invisible challenges we face.

>

Organizations such as the KKK or any other organization that chooses anti-American sentiment [that of choosing favorably over the rights of one race/religion/people over another] attack this country every day. It's in the papers every day. They have *already* had the fight to the US every day. They're US citizens, whoever you are, what should we do with them? They hide behind the very laws I wish to keep in place during a time of war.

>

> they should be allowed free access of the citizens of this country
> because the Constitution allows it?? I dun think so Lucy
>

Check out the purchases and ownership of one Sun Yung Moon across this country, then check out the man himself--or his "church" and see if ya don't at first get a little concerned. Crap like this goes on every day, whoever you are. One of the things that is so very, very true is when *PEOPLE* all over the world--regular citizens just like you and I--begin to express a common sentiment among all of us: that we are all pawns in a stupid game of chance with our politicians and leaders throwing mudballs at each other!

>
> Just wait Dwight. Sooner or later, they'll find your small insignificant
> town and then they're be no one left to cry in your skittles and beer
> with you
>

Ya know what, whoever you are? You may be willing to give up so much (*if* it comes to that because, after all, all theses changes in our liberties and personal freedoms are still being debated; though there have been some changes already) liberty and freedom just to...well, just to what? We have been warned by our government, by think tanks, by over-reactionaries, etc., that this is going to be a long and protracted event. This country has NEVER before had critical changes across the board to our liberties and freedoms--not that I am aware of anyway. I am not willing to bear under to the pressures of some jackass terrorist anywhere, or my government, or anyone else--just so that a war can be fought. I believe too much in the principles of what I believe this country is about. You believe differently and the biggest difference between the two of us is that you would have me somehow "shut up" to keep you safe, and I choose to lay the cards on the table and let them fall where they may.

My United States, even under war conditions, does not put the people and personal liberties and freedoms at risk. My United States stands proud and lives as normal as we can even in the face of the idiots who would see otherwise. Your United States, even under war conditions, does not sound like one I'd be happy or proud to be a part of. I won't hide in the closet when directly faced with choices--at least I hope I won't. I can't say for sure, because it's never happened yet.

Let's not forget that many of the "things" we debate in this thread have not happened. It is simply at the suggestion of them happening that stirs the emotion. You see how quickly President Bush backed off at his "observation" and suggestion that only a selected few in Congress were going to be allowed to have information. Other things, such as phone taps, etc., have only been "suggested" or hinted at, even mentioned on the floor of our Congressional chambers. You make note of how "the sky is falling" we are--it isn't us who is dreaming up the potential; it is the words out of our government's mouth. And, we have the right as United States citizens to challenge those words. And, I don't hanker to the idea of a time when challenging those words would or *could* in any way be perceived by my government or any other authorities as being a threat to national security. You, whoever you are, have provided a scenario about as close as I wish to get to that.

5905. Re: Fun With The Smith Chart

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-17 12:03:36 UTC
From: n2ey@aol.com
Message-ID: <20011017080336.09124.00000078@nso-fm.aol.com>
Source record: 22147

Problem 3:

A radio amateur has space to put up a dipole antenna approximately 107 feet long. She wishes to operate this antenna on the low end of the 40 meter band (nominally 7 MHz) without a lumped-element matching device, in order to chase CW DX using her homebrew 1500 W PEP transceiver.

Measurements already made by the amateur using a noise bridge indicate that the feedpoint impedance of this antenna at 7 MHz is 540 ohms resistive in series with 1125 ohms inductive reactance (540 + j1125). Design a matching section made of commonly available open wire line so that the impedance at the "shack end" of the matching section will match 50 ohm coax with SWR of less than 2:1, and with as little reactance as possible. Neglect line loss in the calculations.

Solution 3:

Using 300 ohm open wire line:

Normalize the feedpoint impedance by dividing 540 + j1125 by 300. This gives a normalized load end impedance of 1.8 + j3.75 ohms. Plot this normalized impedance on the Smith Chart.

Draw an SWR circle, centered on the prime center, that intersects the 1.8 + j3.75 ohms point just plotted. Note that it crosses the resistance axis at 10, which means the line is operating at an SWR of 10:1

Draw a straight line from the chart's prime center (exact center point of the chart) to the wavelength scale. It should intersect the wavelength scale at 0.216 on the "towards generator" scale (the outer wavelength scale), which is 0.284 on the "towards load" scale (the inner wavelength scale).

Since it is desired to minimize the reactance at the shack (generator) end of the line, plot the points where the SWR circle crosses the resistance axis. There are two of them, one at 0.10 and the other at 10. Since this is a 300 ohm system, the point at 0.10 represents 0.10 times 300, or 30 ohms pure resistance. Draw a straight line from the prime center through this point. The straight line just drawn will cross both wavelength scales at 0.0, which is also 0.5 wavelength.

The electrical length of feedline needed is the distance from the 0.216 point on the "towards generator" scale to the 0.0/0.5 point, traveling in a clockwise direction (because the calculation is from the load [the antenna] towards the generator. The result is 0.284 wavelength.

The point where the SWR circle cross the resistance axis referred to above represents the normalized impedance 0.10 + j0. Multiplying by 300 gives 30 +

j0. This corresponds to an SWR of 1.66:1 in a 50 ohm system.

The 107 foot dipole can therefore be matched to 50 ohms by means of a 300 ohm matching section 0.284 wavelengths long. This is within the specification. However, it is worthwhile to design a system using 450 ohm line to see if any improvement is possible.

Using 450 ohm open wire line:

Normalize the feedpoint impedance by dividing 540 + j1125 by 450. This gives a normalized load end impedance of 1.2 + j2.5 ohms. Plot this normalized impedance on the Smith Chart.

Draw an SWR circle, centered on the prime center, that intersects the 1.2 + j2.5 ohms point just plotted. Note that it crosses the resistance axis at 7, which means the line is operating at an SWR of 7:1

Draw a straight line from the chart's prime center (exact center point of the chart) to the wavelength scale. It should intersect the wavelength scale at 0.200 on the "towards generator" scale (the outer wavelength scale), which is 0.300 on the "towards load" scale (the inner wavelength scale).

Since it is desired to minimize the reactance at the shack (generator) end of the line, plot the points where the SWR circle crosses the resistance axis. There are two of them, one at 0.14 and the other at 7. Since this is a 450 ohm system, the point at 0.14 represents 0.14 times 450, or 63 ohms pure resistance. Draw a straight line from the prime center through this point. The line will cross both wavelength scales at 0.0, which is also 0.5

The electrical length of feedline needed is the distance from the 0.200 point on the "towards generator" scale to the 0.0/0/5 point, traveling in a clockwise direction (because the calculation is from the load [the antenna] towards the generator. The result is 0.300 wavelength.

The point where the SWR circle cross the resistance axis referred to above represents the normalized impedance 0.14 + j0. Multiplying by 450 gives 63 + j0. This corresponds to an SWR of 1.26:1 in a 50 ohm system. This is an improvement over the 1.66:1 SWR of the 300 ohm system.

The 107 foot dipole can therefore be matched to 50 ohms by means of a 450 ohm matching section 0.300 wavelengths long. Note, however, that that any integral number of half-waves of 450 ohm line may be added without disturbing the matching effect at the design frequency. So the 450 ohm section may be 0.3 wavelengths, 0.8 wavelengths, 1.3 wavelengths, or more as needed. Since open wire line is often less expensive and less lossy than good coax, the longer sections may be useful.

Calculations done with 600 ohm line result in an SWR of almost 2:1, inferior to the 300 or 450 ohm cases.

Answer: 0.300 wavelengths of 450 ohm line will provide a match of 1.26:1 at the design frequency. This design is optimum for commonly available open-wire lines.

Nobody said it was, Len. Do you see the words "morse code test" or even the word "test" in this paragraph?:

"Suppose someone really hated Morse code, ham radio and all its traditions, accomplishments and other good stuff. One way for that person to hurt the ARS would be to get hams fighting among themselves and behaving in ways that are less than exemplary. Then the person could say "see how hams act?""

I don't see anything about testing.
>
>What is exhibited here by Jimmie Miccolis and company

Whoa there.

Why the use of a diminutive of my first name and my last name? I don't sign anything that way. And I don't have a company.

>is
>a false equation of:
>
> Old-style-amateur-radio = Patriotism-Honor-Integrity.
>
> FALSE EQUATION
>
How is it false? Are you saying "old-style" hams (whatever that is supposed to

mean) is not patriotic, or honorable, and has no integrity? Where do you get such ideas?

You have previously railed about 'fundamentalist amateurs' whatever that is supposed to mean. Now it's 'old-style' ham radio, with no definitions of either term.

>Apparently the old-style-amateur-radio types have their
>lifestyles so wrapped up in their hobby that they cannot
>debate, discuss, or even argue on anything less than
>"all must cherish and honor the things that these old-time
>amateurs love and cherish" or be labeled a traitor,
>subversive, or an enemy of the people of the USA.

Now where do you get all that? I simply noted how a hypothetical person who hated the ARS might act to hurt it, that's all. No names mentioned. I simply pointed out that getting hams to fight amongst themselves is one way to weaken and possibly destroy the ARS. Is that not true? What is wrong with stating the truth?
>
>>The way subversion and terrorism work is to turn a society against itself,

>name of amateur radio.

Tsk, tsk, tsk, what an irrational, emotional outburst, Len. First off, by definition, a society cannot practice subversion or terrorism against itself. More important, I did not accuse anyone of "terrorism in the name of amateur radio". In case you didn't notice, there has been a lot of discussion here about the subject. I just tossed out a general observation.

Is my observation not true? What is wrong with stating the truth?

> GET A LIFE.

I have a very full and busy life, Len. This NG is just a tiny part of it. Seems you want to silence me for some reason. I don't understand why you are so worked up over the few true observations I made.

Since you are fond of unreasonable search and seizure and doing away with the concept of probable cause, it can be inferred that you want us to give up the Bill of Rights just like Osama bin Laden wants us to do. Whose side are you on anyway?

> I feel sorry for your grandsons, and mine, if we don't stop this
> terrorist activity in its tracks. You haven't seen anything yet.

We can fight terrorism without overturning the Bill of Rights. If the Bill of Rights is overturned, you haven't seen anything yet. "1984" missed the year but was right on in predicting what would happen. Compared to that, the present terrorist threat is a drop in the bucket.

Exactly the point we are trying to make, Dick. We do NOT need to throw
The Constitution out the window in order to defeat terrorism. You guys
who advocate repealing the Bill of Rights are the ones who are playing
into the hands of the terrorists. Without The Constitution, sooner or
later, a terrorist would be elected President. Haven't you learned a
thing from history?

Sounds like the original poster was a troll.... I hate to feed trolls, but... If you (original poster, not Jim) think ham's were not relevant, just read the articles in the latest CQ and QST. All the TV stations were off the air due to their antennas all being on top of the WTC. Cell Phones? Forget it, they were overloaded for a week after the event.

Jim was right too about the weather. We get a lot of bad weather here and sometimes ham is the only way to communicate. I read an article that when Hugo hit North Carolina several years ago (can't remember the name of the town it hit), it took out the town's main tower that all the comms were on. Even the Sheriff, Police, and Fire were off the air. Hams were having to ride around with police and fire using HT's as the ONLY communication link.

As to Jim's question, here's a few reasons...

1) Ham's are decentralized. Each ham is his own little entity. We have repeaters, but even those are not centralized but spread out. Plus, in any community there is often more than one repeater on the air, so if one does go out there's others that are useable. Most police/fire etc put all their stuff on one antenna.

2) Ham equipment is versitle. We can quickly change frequencies so we can jump from repeater to repeater. Most commercial police/fire stuff is locked into a set handful of frequencies. It would take a technician to reprogram the things.

3) We can talk to each other. Because of #2, it's real easy for us to talk to each other. Most cities find it hard to communicate with other departments.

4) We are setup for emergencies. Ever hear of field day? It's all about operating under emergency conditions. The contesting is fun, of course, but it's about being able to setup equipment quickly under adverse conditions. Even if our fancy towers were to come down, most hams could quickly setup some sort of temporary antenna and operate of batteries and be on the air in a brief amount of time.

5) I think you (Jim) were very on target when you said "...maybe because they tend to be built by hams that care about their equipment, ...". Most of us do ham out of a passion, and care about the state of our equipment. I'm not knocking the technicians that take care of commercial equipment, but a lot of them are bound by finanical corporate considerations they have no control over. Unbound by such considerations (although a lot of us are probably on a budget) we find a way to get done what we feel needs to be done, either individually or in groups.

I recently read (think it was CQ) that ham radio is 99% hobby and 1%
service, but that the 1% service during times of emergency more than
justifies the other 99% of the time.

73's,

Robert / N4IXT

Apparently I have been out of the military radar business a bit too
long. I entirely missed the development and deployment of these
military systems that completely cover the US down to 0 ft AGL.
Care to elaborate?

> In addition, we have satellites to back up that radar capability,
> tactical radar on the jets flying over the intensely protected areas,
> and radar aboard the ships now patrolling the major ports and
> coastline. When you add in the FAA civilian radar to that picture, the
> use of AWACS aircraft is just a "little" redundant.

Actually, my take on the situation is that the FAA radars
comprise the primary air-defense acquisition system for
the continental US airspace. They seem to be the only
system deployed widely enough to cover the area. And they
all digitize their data, so piping it all to NORAD is a
cinch. But they do have their blind spots.

The other options you mention really aren't. Just think for
a moment about the capability a satellite system would have
to have to track aircraft in real time. For starters, it
would have to be RF-radar-based to look through the cloud
cover. The radars on tactical aircraft are strongly oriented
towards weapons delivery and not suitable for surveillance.
That is if those gas-guzzling fireballs could stay in the air
long enough to actually cover an assigned area. Radar picket
ships are a possibility, but pulling Aegis-class missile
cruisers out of the Persian Gulf and other foreign waters

is probably a non-starter.

The truth of the matter is that our air-defense systems are stuck back in the Cold War where the expected attack was by ICBM and the primary air-defense weapon was a retaliatory strike with Minute Man missiles and mutually assured destruction. Now the US government has discovered that it really doesn't control its own airspace and the only way to do that is with airborne radar platforms, AKA AWACS.

> lines.

Not only that, Jim, but that process can be repeated for 30m, 20m, 17m,
15m,
12m, and 10m for that same antenna. For most of those bands, there is a
450
ohm feedline length that will result in an SWR less than 2:1. That's the
way
I match my 130ft dipole on all HF bands without needing an antenna
tuner.
And matching in that manner reduces common-mode currents on the
feedline.

>enough to wish harm on a person)? When I started this thread, I had no
>idea that so many would be opposed to it. I guess I now have an answer
>to the "where did my America go" question.

Very few of these postings are really about constitutional rights.

The majority of them seem to be "tough talk" statements of
pomposity intended to control and subjugate all who don't
think like they do...to "win message points" in a virtual
"battle" with words. Heh, it's been that way in computer-
modem communications since it started over two decades
ago. "Bravery" is exhibited by those who call others names
because the time-distance separation of the computer medium
isolates them from direct personal confrontation. Thus shielded
from harm they feel they can say anything they like. They like
the power they feel over others.

It is worse when some hide behind pseudonyms...such as this
Jackoff character (alias "Fungi" and the "director of a QSL buro")
or those that say "everything I write is the 'truth.'" Barf.

Meanwhile there are still two F-16s ready to scramble at
the local airport, ready to take off and shoot down civil
air carriers. Some control freaks love that...as long as it
doesn't happen in their precious neighborhood.

Note "neighborhood." All of the control freaks pretend to be
"of and for the USA" but they are really "defending" their
own local territory. They want to have Their territory be the
model for the USA. That way they are free to insult and
demean those who do not live where they live and are not
like them.

Control freaks really hate freedom for others. They only
want freedom for them to do and say what They wish.

The copyright on the format is still in effect. Copyrights last
for "life plus 50" or fifty years after the author's death.

Just the same, there are many JPG and GIF copies available
over the Internet. Repro is the cost download time plus
paper and ink.

>> and you can't read it to very many significant digits
>> either.
>
>Since it's hard to make any measurements with more than
>two or three significant digits, who cares?

Few use the Chart for accuracy. It is the visualization,
especially with many frequency plot points that can offer
much insight into using whatever accuracy in solution
with a scientific pocket calculator.

Measurement accuracy to obtain plot points depends on
the instrument. That affects BOTH Smith Chart and
computer program solutions.

Actually, it appears that empty space contains something.
There is not nearly enough visible matter to cause the
observed gravitational pull. They call it "dark matter".
I think it may be "transparent matter".

Even if one uses the most accurate method humanly possible, it
will still not perfectly agree with reality. The Smith Chart gets
one close enough that "cut and try" then zeros in on the exact
reality-oriented solution.

Another instructive example might be exactly how one obtains
an electrical line-length to 'rotate' a measured
impedance through, given the somewhat limited range of a
typical noise bridge (< 250 ohms resistance and reactance
if I remember correctly) and the vagaries of correlating
physical length with electrical length at a given frequency.

Those that think they "matter" don't have the "gravity" of the
situation in mind... :-)

However, the "intellect" Kim referred to is transparent, dark
matter since it doesn't ID. Perhaps in another space-time
continuum? :-)

Happy 450 Ohms!

That's a simple task on the Smith Chart. Plot a point of the impedance. Take a straight-edge and lay it on the plot point and the Chart center. The admittance lies along that straight line at the same radius as the impedance plot point. Do the same for conversion from admittance to impedance.

Or one can take a scientific pocket calculator such as the HP 32SII, enter the admittance susceptance first, then conductance, do the three-key dance for a complex inversion. Impedance resistive part is displayed, do an X<->Y single key to display reactive part. No sweat.

If you know someone who has a collection of the HP Library of calculator programs, get # 2603D, "Transmission Line End Impedance Rotation" (May '78). That will work on HP-67s and HP-97s. Program steps and method are all explained to allow conversion to more modern programmables.

An admittance bridge (such as the so-called Noise Bridge) is based on balancing the bridge's parallel resistance and capacitance with the load. The ranges depend on those variables. I've only built two of them and don't know what a "typical" Bridge has, but a 5K carbon-element pot can work up to 30 MHz (better for a ganged 10K carbon dual pot with the gangs wired in parallel to cut down on the inductance presented by the internal contact arm.

An impedance of 540+j1125 at 7 MHz will appear the same as the parallel connection of 2884 Ohms resistance and 1384 Ohms reactance inductor. [the admittance dual is 346.8 - j 722.4 micromho] The parallel resistance for balance would be too high if the "typical" bridge is 250 Ohms. But, there is a solution through a "range extender" if needed. Read about it in Ham Radio magazine, May 1978. That article has 5 HP-25 programs that work with the Noise Bridge and all of those can be adapted to more modern ones. One program handles the "range extender" fixed-component plug-in.

CQ Communications and the ARRL both sell the CD-ROM set of 3 disks that cover all 22 years of HR's existance. [CQ bought HR entire a decade ago] $150 plus shipping for all three, consult their websites for individual disks.

With kindest regards,
LHA

5934. Amateur Service Withers

Now that the publicity associated with Amateur Restructuring has worn off, the trend of decreasing numbers of US Amateur Radio Service Operators has returned:

http://www.ah0a.org/FCC/Licenses.html

Told ya.

Unless Hams make a concerted effort to reach out to the younger generation, this trend will soon start to go logarithmic.

I offered a solution a year ago, but it was ahead of its time, and probably still is. But, mark my words, eventually the Amateur Service will be FORCED to implement something similar to what I've suggested. Either that, or the FCC will eventually auction off or open up most of the virtually unused VHF/UHF frequencies(other than a few high-level repeaters, these bands are basically dedicated to a sea of unused closed repeaters), where they can be put to good use.

5935. Where is my America going?

When we get over what was certainly a well-planned caper that had incredible luck we may get around to assessing the long-term lessons of this: much like learning to protect trains from Jesse James and Butch & Sundance. I will submit two:

A. We need to stop the deterioration of Public Health and trauma care in the U.S. Aetna HMOs are not planning to pay for either and encourage their deterioration. Ask your local hospital admin about being able to isolate a case given that the air handling systems are common. Ever wonder why just about every NYC hospital worker there over 90 days will lite up to a tuberculin test???

B. If we are serious about depriving terrorists of finance we need to find a way to take the profit out of the drug trade and that implies some form of legalization and legal supply. Joe Stalin achieved his early position in the Bolsheviks largely thru skill at bank robbery; now it is done by smuggling.

Unless we plan to leave hospital facilities standing around looking stupid it would seem like they might have to earn their keep treating, as examples, drug addicts, everyone between 6 months and 14 years, all trauma cases for the first 72 hours, etc. And of course Republican coronaries at the very ideas of socialized medicine and drug legalization.

One more case of doing the sane thing or being ideologically pure.

It is not my area of expertise, so I would no idea where to begin to elaborate. However, I seem to remember reading in some defense publication about some type of look down radar on satellites that was specifically designed to eliminate the problem of tracking low flying aircraft. Since you seem to know more, has the military done nothing over the years to routinely track low flying aircraft - something besides having a number of AWACS airborne all the time?

> spots.

I agree that the FAA radar systems are a major component of that capability, but it is not the only one. Lets take the Coast Guard as an example. Over much of the country, most reports of suspicious aircraft do first come from FAA facilities. However, in key areas (the Gulf, southern CA, etc), the Coast Guard itself maintains a watch with it's own radar systems. Likewise, the Navy also maintains a radar watch over those same areas. In addition, the Coast Guard maintains it's own fleet of basic AWACS type aircraft in these regions that are detached when something is reported by these other systems. The same with the Navy. So, in these regions, it is usually either Coast Guard or Navy radar systems that first detect suspicious aircraft. When that occurs, AWACS type aircraft are then dispatched to get a wider view of the situation.

Anyway, I suspect it is the same around the rest of the country - layers of radar systems, each with unique capabilities, maintaining

watch. And, just like with the Coast Guard or Navy, when something is noticed using these systems, AWACS type aircraft are then dispatched to get a better overall view of the situation, while other aircraft are sent to intercept the specific threat.

That is not what I said and you know it, Dick. Since you cannot find anything wrong with what I've actually said, you have to make up stuff. Be careful with that, because two can play that game. For example, a friend in another newsgroup told me that you posted a message there saying that your fully supported the Taliban, and that you were personally planning further attacks on other targets.

>WWII has gone down in history as an American atrocity.

Racially "profiling" the Japanese during WWII was unfortunate, but a
necessary thing at the time. In view of what we know now about
the atrocities committed by the Japanese during the war, it certainly
was a small price for Americans of Japanese descent to have their
rights temporarily suspended in the interest of national security.
In view of the events of 9/11, it makes sense to take similar, if much
less drastic precautions. It would be foolhardy *not* to "racially
profile" Arabs or persons with Arab features when boarding
commercial airliners, entering certain public buildings, or accessing
any secure facility which would be a likely target. And I'm not talking
about rounding them up into retention camps or anything like that --
just using reasonable, rational security precautions that are not
intended to, or have the effect of, limiting their rights as American
citizens or legal residents of the United States.

We have all now seen what committed, fanatic terrorists can do, and
we know where this terror comes from. We must now deal with it
the best we can, and this will certainly require that specific people be
more closely examined, based entirely on where they came from and
what they look like. Call it racial profiling, or give it any politically-
correct label that suits your pacifist purposes, but I, as an American
concerned with the security of my country and the safety of ALL
of it's citizens and legal residents, just think it makes simple,
common sense.

Do you know something that the rest of us don't, Dick. As far as I know, no government agency has said a CBR attack has occurred in either of those places. At this point, those Anthrax incidents could have come from anybody (pranks, angry ex-employees, some other group, someone out to get attention, and so forth).

except, according to Cecilian logic, this is a comment, brief, but still a comment.

You didn't disappoint me Dwight. You and your minority would give aid and sanctuary to the enemy all in the name of preserving some rights that won't affect you anyway. You'd just a soon sacrifice citizens of this country by hindering the ability of law enforcement from tracking these camel jockeys down. Allowing them to use the very laws you whine and cry about against us.

Whelp Dwight, I bid you ado, as they have just activated the 1179th Deployment Support Battalion out of Fort Hamilton and as they saying goes, where they go I go.

It's been a slice of heaven. I hope well to all, well, almost all, right Len??

TTFN as Christopher Robin would tell Pooh Bear

Your "trend" represents a percentage change whose total is on the same
order as the mean month-to-month fluctuation in membership.

And a year ago you suggested what, exactly? Do you feel the ARS should
be punished for not having immediatly implemented your suggestion?

So your solution is to get rid of our free and open society? That doesn't make sense, Dick. You're giving the terrorists exactly what they want - proof that our society is wrong, proof that our concepts of liberty and freedoms are wrong. The more we change because of them, the more they have won (and we have lost).

Deliberate spreading of Anthrax is a CBR attack, whether
or not a "government agency" says so. Period.

> At this point, those Anthrax incidents could have come
> from anybody ....

Just "anybody" does not have access to anthrax spores to
willy-nilly start mailing them around, coordinated in time
with other organized terrorist activity. While the government
despartely tries to spin-doctor this so as not to alarm the
citizenry, somebody with money and organization is systematically
targeting our media communications and our government with
the terror of deadly diseases. Their targets are well picked
for maximum public visibility, and these are not isolated cases
of disgruntled previous employees or wild-eyed kooks. This is
a deadly-serious CBR attack. Be afraid, be very afraid!

Hans

As a related note, even ham radio is not immune. Here is a message
I just received related to RadioSport contesting.

To all amateurs active in CQ-sponsored contests:

Due to security concerns, CQ Communications Inc. is asking all participants
in CQ-sponsored amateur radio contests to submit their logs electronically.
All logs for the CQ World Wide DX Contest, the CQ WPX Contest, the CQ World
Wide 160-Meter Contest, the CQ World Wide VHF Contest and the CQ/RTTY
Journal RTTY contests should be submitted via e-mail per instructions in
the rules for each contest. In light of recent events regarding hazardous
items sent through the mail, logs received through the mail at the CQ
offices will be held unopened until all potential health risks have been
evaluated. CQ says it cannot guarantee that logs submitted by postal mail
will be opened. Contesters who want to be sure their scores will be
counted must submit by e-mail.

"We regret the need to inconvenience those contesters who do not have
access to internet-connected computers, or who choose to log by hand and
submit those hand-written logs," explained CQ Communications President Dick
Ross, K2MGA. "But our logs come from all over the world. While the risk
that amateurs might be involved in any sort of terroristic activity is
extremely small, mail en route may be subject to tampering. We cannot ask
our staff members or contest committee volunteers to possibly expose
themselves to dangerous packages sent through the mail."

"We are not giving in to terrorism," added CQ magazine Editor Rich Moseson,
W2VU. "We are facing a very real and fast-growing threat and we are taking
reasonable precautions to protect our staff and volunteers."

CQ requests that this information be disseminated widely so as many
contesters as possible will be aware of this rules change before the SSB
weekend of the CQ World Wide DX Contest on October 27-28.

Thank you and I hope to see you in the CQWW this weekend.

73,
Rich W2VU
Editor, CQ

An excellent point, Kim. When it comes to our own personal risk of death or injury, one must remember there are an average of 1,600,000 violent crimes in this country every single year, including 18,000 murders (almost 4 times the number killed in the WTC attack). For that matter, there are many risks in our lives - there are average of 40,000 people killed in automobile accidents, 25,000 killed in home accidents, and 4,000 people killed in property fires, every single year. So, if we're going to be concerned about our own safety in this country, a single instance of terrorism, like the WTC attack, should not be the main focal point of that concern.

>>
>> Ex-militia member flees into highland
>> Police say man fired on officers
>> By Lance Williams and Bill Estep
>> HERALD-LEADER STAFF WRITERS
>>
>> MIDDLESBORO -- Police continued searching last night for a former militia
>> member who allegedly shot up a Bell County patrol car Sunday and then escaped
>> into the mountains with several weapons, including an assault rifle and perhaps
>> grenades.
>>
>> Officials say Steve H. Anderson, 54, shot at police after a traffic stop for
>> having non-working taillights on his pickup. No one was hurt and Anderson
>> escaped by driving the truck off-road into the mountains off U.S. 25E just
>> north of Middlesboro after a gunbattle with police, according to officers.
>>
>> Police discovered two pipe bombs in the truck early yesterday, prompting
>> federal and state law enforcement officials, including the FBI and ATF, to

>> surround Anderson's home near the Elrod community in rural Pulaski County. A
>> search of the home is expected today.
>>
>> As of late last night, Anderson -- who police say apparently has military
>> experience and survival training -- remained at large with a considerable
>> amount of firepower. ``He appeared to be loaded full tilt,'' said Deputy John
>> Hoskins of the Bell County Sheriff's Department.
>>
>> According to the Bell County Sheriff's Office, the incident began at 8:15 p.m.
>> Sunday, when Deputy Scott Elder stopped Anderson's vehicle about the
>> taillights.
>>
>> Elder approached Anderson and asked for his driver's license and explained
>> about the lights. Anderson refused to cooperate, and Elder noticed an
>> ammunition magazine lying in the truck seat, police said.
>>
>> The Kentucky State Police said Anderson told Elder he was a member of the
>> Kentucky State Militia -- an organization that disavowed him earlier this year
>> -- and was on patrol.
>>
>> When Elder asked Anderson whether he had weapons, Elder said Anderson
>> responded, ``I have several,'' and began to get out of the vehicle. Elder then
>> ran behind his vehicle as Anderson began firing an assault rifle at the patrol
>> car, according to police.
>>
>> ``He tried to cut it in half,'' Hoskins said.
>>
>> Anderson then drove off northbound on U.S. 25E, and Elder followed. Anderson
>> made a U-turn and began following Elder and shooting at him again, police said.
>> Those shots disabled Elder's car, and a Pineville city police officer picked up
>> the chase.
>>
>> Police returned fire, with Elder nearly emptying his clip.
>>
>> Anderson continued to fire at the officer, police said, and then drove into the
>> mountains, eventually finding an unpaved path that the police cruiser couldn't
>> follow.
>>
>> Over the next several hours, members of the state police Special Response Team
>> searched for Anderson on the ground, while officers in a helicopter equipped
>> with heat-seeking devices and spotlights searched from the air. Police
>> evacuated several homes around the search site Sunday night, but most people
>> were allowed to return by yesterday morning.
>>
>> At 5:30 a.m. Monday, police found Anderson's truck about 100 feet over an
>> embankment. Police found little of the ammunition Elder had seen in the truck,
>> but did find two pipe bombs. The state police bomb squad was called to the
>> site.
>>
>> Police said they thought Anderson's arsenal included grenades. They found no

>> blood or other evidence in Anderson's truck that he had been hit.
>>
>> Anderson has a criminal record. In September 1993, he was charged with two
>> counts of first-degree wanton endangerment, court records show. In 1994, one of
>> the felony charges was dropped and he pleaded guilty to a reduced charge of
>> wanton endangerment second degree. He received a one-year suspended sentence.
>> Details of that case weren't available yesterday.
>>
>> Anderson is better known for a controversial short-wave radio program, The
>> Militia Hour, which broadcasts militia-related news and features Anderson's
>> views, which range from denouncing gun control to criticizing the U.S.
>> government to blasting religious minorities. Anderson identifies himself as a
>> follower of the Christian Identity movement, which claims that Jews are the
>> offspring of the devil.
>>
>> Earlier this year, the Federal Communications Commission began an investigation
>> of Anderson for broadcasting without a license. FCC officials would not comment
>> on the status of that investigation yesterday.
>>
>> Anderson, who had previously served as a major with the Kentucky State Militia,
>> was kicked out of the group in April for several on-air comments regarding
>> religious and ethnic minorities.
>>
>> ``We pretty much disassociated with him completely,'' Patrick Perry of Murray,
>> an assistant commander of the group, said yesterday. ``He's a little too
>> extreme for us.''
>>
>> That view was shared among Anderson's neighbors.
>>
>> Lanta Turner said Anderson sometimes talked to neighbors about his
>> anti-government and racist views. ``He's got a lot of opinions,'' Turner said.
>> ``Most of them nobody agrees with.''
>>
>> Those opinions also got Anderson into trouble with the militia, whose former
>> commander sent a letter to the FBI in April warning officials about him.
>>
>> ``His views are pretty extreme,'' said Richard Stephens, a militia commander in
>> Paducah. ``He's a racist and a very paranoid fellow. Actually, I'm surprised he
>> hasn't been killed yet.''

5953. IARU Administrative Council Calls for End to Morse Requirement

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-18 01:30:39 UTC
From: billsohl@mindspring.com
Message-ID: <3bce2fd2.20648208@news.mindspring.com>
Source record: 22247

IARU Administrative Council Calls for End to Morse Requirement
(Oct 12, 2001) -- Saying that it was "setting aside any previous
relevant decisions," the International Amateur Radio Union
Administrative Council this week resolved
that IARU policy supports "the removal of Morse code testing as an
ITU requirement for an amateur license to operate on frequencies below
30 MHz." The Council further resolved to urge member societies--as an
interim measure--to seek Morse code testing speeds "not exceeding five
words per minute."

In case you missed the full story, go to:
http://www.arrl.org/news/stories/2001/10/12/100/?nc=1

Whether your idea is a good one or a load of crap it is not borne out by the Sept to Sept counts:

Extra plus Advanced plus General: 322,319 vs 314,290 a year ago.

All that has happened is that the gas from the codeless Tech is being released and will continue to be for a number of years. You didn't need Joe to tell you that; the local repeaters should be evidence enough. While one questions the number of Generals etc with a mailing address of Sunnyvale Acres and advanced who have not upgraded, the fact is that the decline has been in classes comparable to your proposal.

Richard, this might be stupid and it might not work ... but .. I was talking with a couple of friends two nights ago and had an idea. The government pulls a few convicted drug dealers out of prison and offers them an 'out'. Play ball with us and we will give you a new identity and a fresh start. Then they claim these drug dealers (pull them out one at a time over a few weeks - and from fairly widespread cities across America) have been diagnosed with anthrax which was put in their coccaine from the sources overseas. Then they claim these people died. Yeah, I'm not crazy about the government lying, but can you imagine the fallout if drug use dropped 90% inside of a month? Wwwwwwooooooowwwww! Talk about taking money away from the Taliban (isn't Ashcanistan one fairly big source of coccaine?). The Taliban could be credited with doing what the government has not been able to do for years. Probably wouldn't work, but it was a sweet dream (even if only for a few minutes!).

I don't personally know anyone into amateur radio, I hope you don't mind if I ask a few questions of your group.

In the event of an emergency (national or local) where would radio operators gather to pass information?

Is there a predetermined band?

What mobile gear would be required to monitor?

Which license is required to transmit?

Thanks very much

Ditto! I read the rec.radio.cb group and read that stuff about hams there as well. Amateur Radio
is, indeed, quite often in the thick of emergency communications. Could you imagine a group of
"chicken banders" trying to pass traffic for EOC? "!0-4 thar, Mercy me, thar, Gre't day 'live thar,
shore thang thar, we 'uns 'll git that thar mesage right thru thar, shore thang thar, mercy me thar, guaran-told ye thar (ad nauseum)". By the time they get finish 10-4-ing and "guaran-told-ing" each
other, they'd have forgotten what the message was about! ROTFLMAO! What was really funny
about this ham-bashing that was going on on that board was the final comment I read in one of those threads. ".....and while them old fart hams wuz a-moanin' about their 'arthrituss',
us CBers wuz a-standin' by on 27.555 to pass that 'ere ee-mergency traffic." He just didn't understand why they weren't getting any messages to pass! LOL! What he didn't know was that
hams were already at ground zero almost from the start, and his comments came off sounding sooo
,er, dumb! LOL!

The USAF and Customs seem to be having fair results with radars suspended from balloons (aerostats) here along the border with Mexico. They fly them at about 10,000 ft AGL and get a 150-mile range. The main drawback seems to be that high winds can shut them down for days at a time.

There are two problems with satellite radars. One is the radar equation's stipulation that received power from a target decreases with the fourth power of range. A 200-mile altitude may not seem like much, but it's a long haul for conventional radars. Geosynchronous orbits are out of the question for this reason and the next. A radar's azimuth and elevation resolution is inversely proportional to the size of the antenna -- the bigger the antenna, the finer the angular resolution. To get the resolution routinely achievable with a terrestrial radar (about 1/2 degree) would involve orbiting a huge structure even in low-Earth orbit. The satellite radars in use at present utilize their orbital speed to form a synthetic aperture thousands of feet long, but that only gives a 'snapshot' of the ground as the satellite passes by.

> the situation.

We're back to the basic AWACS problem -- a lot of aircraft in the air
all the time to cover the US or having to live with blind spots in
the screen. My original speculation was that more AWACS-type aircraft
were now needed and that's why the NATO aircraft were called in.

> Anyway, I suspect it is the same around the rest of the country -

The radars are only part of the system. They are ineffectual if not
tied together with a command, control, communication and intelligence
system that can filter and correlate the data into a meaningful whole.
I see that as essentially lacking, save the USAF/FAA liaison.

Yup. Absolutely.

>That's the way I match my 130ft dipole on all HF bands without needing an
>antenna tuner.

You have an "antenna tuner", Cecil. It's just not a lumped-element tuner. Your matching method was the inspiration for Problem 3. The cost of a legal-limit tuner was avoided by the ham in Problem 3.

I suggest the term "linear tuner" as a name for your method.

>And matching in that manner reduces common-mode currents on the
>feedline.

I don't know about that. If the antenna/transmission line system is balanced to begin with, the only place common mode currents can originate is in an unbalanced lumped-constant tuner or an "unbalanced balun". Of course eliminating the lumped-constant tuner means the balun is the only possible source. But I'm not going to start another balun thread...

Four more points:

1) Manufactured lines typically sold as "450 ohm" and "300 ohm" often measure significantly different impedances than the nominal values.

2) Even if a ham decides to go with a lumped-element tuner, an informed choice of line length can make a big difference in antenna performance.

3) The losses in many types of "open wire line" are not negligible. The common "window line" that is simply big Twin-Lead with rectangular holes punched in the insulation can have significant loss when operated at high SWR, particularly when wet. When you add up the loss in a lumped-element tuner, balun, and "window line" operated at high SWR, it may be as much or more as decent coax operated at reasonable SWR.

4) Many software packages make this sort of design a snap. Both EZNEC2000 and DIPOLE1 let you play with all the parameters much faster and easier than a chart.

Has your vertical beaten that dipole yet?

Well, I'll bow to your expertise on the subject, because I really don't know. However, it does rather surprise me that our government, with it's billions spent on the military each year, has not developed something more effective than balloons, and has to depend on other countries for the defense of this country's airspace.

It's certainly not new, Len. You could have seen the same abuse on broadcast radio by some DJ's of the past (less so now that radio, for better or worse, is almost entirely corporate owned). And it is almost commonplace in the CB frequencies. In fact, I'm sure you'll find it anywhere people can run their mouths while hiding their identities.

> picked for maximum public visibility,
> and these (snip)

Well, one of those media communications (CNN) carried a story just a few days ago pointing out that there are an average of 60 Anthrax cases in the US each year. In addition, the disease is relatively commonplace throughout the world.

http://www.cnn.com/2001/HEALTH/conditions/10/16/anthrax.timeline/

Furthermore, anthrax can also be found in farm animals.

http://www.cnn.com/2001/HEALTH/conditions/10/12/anthrax.qanda/

Because of this, veterinarians and livestock workers have been getting the anthrax vaccine for several decades.

http://www.anthrax.osd.mil/Site_Files/qna/THREAT.HTM

Therefore, it is actually relatively easy to obtain anthrax. Furthermore, if there is an organization behind these attacks, they are getting ripped off by their supplier - none of the anthrax found so far is the highly deadly type normally associated with weapons (the stuff found so far is easily treated anthrax like that found in animals).

In other words, there is no evidence so far that any organized anthrax attack is taking place. So, while caution is certainly called for, it is not time to panic yet. Nor is it time to induce panic by spreading unproved rumors.

>

The reason that I have heard of why the military "may" be in the malls, is that apparently there was an Arab student at the University Of Michigan who had warned another student that he should not go on any plane on Sept. 11th and not in any malls on October 31st. This was shared from the Arab student to another student who revealed that this information was shared in confidence with him before the event. The student who had this information shared with him revealed it to the authorities after the Sept. 11th event.

If this story is true, too bad the student held in confidence didnt report it. Maybe some lives could have been saved. As far as the mall is concerned, I RARELY go there anyhow.

That is true..... Thank the Republicans for that way of thinking also. They want you to act only a certain way. The want you to speak a certain way. They want to control though. They basically want us all as carbon copies. Nothing unique or "different". Sounds a little like Communism eh? Or Religion?

It is sad to say, that we will NEVER be in the same world we USED to enjoy. Our way of life will never be the same.

Far more people die from illegal drugs EACH YEAR than were killed in the WTC attack. According to the CDC, there are an average of 425,000 drug related episodes in hospital emergency rooms nationwide each year, resulting in about 9,500 deaths per year. It is absolutely foolish to legalize something that causes far more harm to this country then the threat you're trying to defeat.

Dwight Stewart wrote:

I agree with
you that our AWACS capability might be stretched thin at the moment,
but our defense of US airspace has never depended on AWACS aircraft in
the first place. We have a wide range of military radar systems around
the country that can watch anything in the air (including something
flying low enough to dim it's headlights for passing vehicles). In
addition, we have satellites to back up that radar capability,
tactical radar on the jets flying over the intensely protected areas,
and radar aboard the ships now patrolling the major ports and
coastline. When you add in the FAA civilian radar to that picture, the
use of AWACS aircraft is just a "little" redundant.

Then.....
